AMERICAN AGRICULTURIST

THE FARM PAPER OF THE NORTHEAST

Winter Chores On the FARMS of the NORTHEAST

HARVEST: (Upper Left) — Pullets do not argue — at least not with words — but in effect they say: "Give us good care and proper feed or you get no eggs." City consumers have learned that northeastern eggs are top quality. One way to keep this reputation is to gather eggs frequently in the winter and to protect quality every step of the way until they reach the consumer.

CORN MEAL: (Upper Right) — Grinding corn on the farm of Romeyn Berry, a firm believer in "more living from the farm." In Grandpa's day grist mills were located where there was waterpower, perhaps five or ten miles from the farm. It was a good day's work to "go to mill" with a team and wagon, or in some cases with a bag of grain behind a man on horseback.

Now the mill, mounted on a truck, comes to the farm; and when the job is finished, is away to another in less time than it took Grandfather to hitch up the team.

DINNER TIME: (Left) — With hay supplies short on many northeastern farms, it is a real job to figure out a feeding program that will maintain production at the least possible cost. But caring for cows is more than a job — it is fun to breed better animals and to watch them grow into good producers. This is Milton Lee of Dexter, Jefferson County, N. Y.

INVENTORY: (Lower Left) — Take a pencil, a piece of paper, and a few hours' time and what do you get? One answer is "An inventory" which will be invaluable in case of fire, useful if you want to borrow money, and the taking of which may remind you of some tool Neighbor Smith borrowed last summer and hasn't returned. Annual inventories, so they say, give more information for less work than any other kind of farm record.

LIVING FROM THE FARM: (Lower Right) — One way to get retail prices for farm products is to consume them on the farm. Winter days spent in the woodlot or caring for the livestock bring keen appetites and full appreciation of home-cured hams, bacon and sausage. If a quick-freezing locker plant is available, meat can be kept fresh until time to butcher again.

Farm Credit Administration Should Remain Independent — See Pages 4, 5, 26.

Vermont's soil and climate favor grass and hay, but even after 150 years, its farmers are still learning new ways to use them. Milk from the Foster farm goes to New York. The farm includes 178 acres, 50 on the bank of historic Otter Creek.

Green Hills of Independence

ETHAN ALLEN and his Green Mountain Boys had to fight for their homes in the hills, right from the start. In 1761 they came to what is now Southwestern Vermont. They had paid New Hampshire for this land, but New York also claimed it. Life was precious, but liberty and justice were more so. Fight they would and fight they did. Allen and his hardened veterans kept on with their battle for freedom when the Revolution broke. The New Hampshire grants were more than ever a dangerous place to live, but settlers went ahead to clear and build . . . to lay out towns and set up their own government. They learned to live in danger. Burgoyne swept their countryside on his fateful path to Saratoga. Their joy with his defeat was cut short in November '78, by Indians and Tories, who burned every building they could find. In Middlebury, only a barn and two houses were left. America won its independence. The New Hampshire grants became Vermont. Hands that were deadly with the musket again took up the scythe and grain cradle. Addison county became a garden spot; in 1817, a bumper crop of wheat went to \$2.25 a bushel.

When wheat went west, Addison county turned to sheep. By 1840, it produced more wool than any other county in the U. S. Just 100 years ago, Addison was the fine-wool center of the new world. Its Morgan horses were highly prized for their Vermont-bred endurance.

But change follows change, and brings its own new problems. Sheep profits dwindled, but cheese sold well. So did hay. In 150 years, Addison county has seen four distinct types of farming . . . grain and beef, then Merino sheep and Morgan horses, then cheese, butter, and hay, and now market milk.

Most of Addison county is level or gently rolling. Some of it is mountains. Albert Foster was born in those mountains 75 years ago, five miles back from Ripton. He yearned for a farm easier to work, so when he was 28 he moved out of the hills and bought a place in Middlebury. He sold cream to the butter factory and fed skim milk to hogs and calves. He changed his farming to meet changing

times. In 1917 he started shipping milk.

Albert's son Howard now owns that farm. He grows alfalfa and part of the grain for his 25 cows that average 10,000 pounds of milk a year. His maple syrup pays his taxes. This land paid for itself for Albert . . . is paying for itself again for Howard.

Just as it did a century ago, Addison county farming still takes hard work, good management, and careful spending; but it offers comfort and good living for Howard Foster and his young family. For them too, the Northeast is a good place to farm . . . still the green hills of independence.

This is another of a series of advertisements, each
An Expression of Confidence
In Northeastern Agriculture

* * *

Half of the farms of the Northeast are free and clear. They have earned their independence. The others are mortgaged. For some 30,000 of these farmers in New England, New York and New Jersey, the Federal Land Bank is providing a type of mortgage that gives the greatest degree of safety for the man on the land. Ask for the folder "Farm Mortgage Loans Through the Federal Land Bank." It describes these mortgages in detail.

THE FEDERAL LAND BANK
OF SPRINGFIELD
SPRINGFIELD, MASSACHUSETTS

Serving New York . . . New England . . . New Jersey

This home was built 125 years ago, 3 miles south of Middlebury, Addison County, Vt. Here now lives Howard Foster with his young family and aging parents.

The Northeast is a Good Place to Farm

Selling fence posts is a simple way to turn farm woodlot products into cash. This picture was snapped on the D. Wagner farm at Parish, N. Y. The boys are Frank and Edward Milcovicz and Lindsay Brayton.

When Farmers Sell TIMBER

By RAYMOND HOYLE,
New York State College of Forestry.

WOODLOTS are growing crops that must be harvested. Since trees require many years to mature, the small woodlot owner seldom has the experience of marketing this crop. Because of this lack of experience owners generally lack information about problems to be considered, markets to be investigated, or of the qualities and prices in the different markets.

If the woodlot is small, the demands of the farm may be sufficient to use most of the timber for fuel and posts, while the sawlogs may be sawed in a nearby mill for barn and shed construction, and other general farm building. If there is more than enough timber to satisfy the needs of the farm; or if there is no local mill to do the sawing; or if the species are not adaptable to farm use; or if they are more valuable when sold for some other purpose; then the owner is about to become a merchandiser of timber or rough forest products, a logger, a sawmill man, or a lumber salesman. How deep the woodlot owner wants to go into this business will determine how many of the above phases of the business he will need to understand.

Forestry agencies have tried to help the woodlot owner in various ways to establish forests and produce better timber in his woodlands. This is desirable but what he needs most of all is help and advice in marketing his forest crop. It takes many years to grow a timber crop. The hasty and careless marketing of the crop is evidence of lack of appreciation of this important part of the forestry business.

In converting a woodlot into money an owner must decide whether or not he wishes to sell standing timber and, if so, how it should be done. It may be sold by the entire tract or by the board foot, or by certain species, qualities or sizes. Depending on conditions, there are advantages and disadvantages with all of these different ways that the owner should understand.

The owner may decide to buy or hire a sawmill to be set up on his tract and thus make lumber from his trees. This involves an entirely new set of problems, for the woodlot owner has become a manufacturer and therefore he must become a lumber salesman.

If this sawmill business looks too involved and costly the owner may decide to sell rough forest products such as saw logs, veneer logs, posts, piles, pulpwood, fuelwood, crate bolts, or excelsior wood. Here again a knowledge of demands of these different markets and the problems involved are essential to undertake this business satisfactorily.

Woodlot owners sometimes wish to buy a few inexpensive or used machines to make crates, apple boxes, lawn ornaments or furniture and many other articles to be used on the farm

or sold to other farmers or the general public. The idea of this venture is to utilize their timber and afford work for themselves and possibly hired labor in the dull season. This again is tending toward a rather complicated business in which only a few would probably succeed.

A great many things must be understood when attempting any one of these undertakings. In order to help

the woodlot owner better understand these problems, the New York State College of Forestry at Syracuse University, Syracuse, New York, has been working on these problems for many years. The results of some of these studies have been published in bulletin and leaflet form. These bulletins are from 100 to 200 pages in length and are available for the cost of printing. They should be of considerable help to one who is planning on selling timber or rough forest products, or making lumber, small dimension stock, and similar items.

In addition, the College operates a marketing service entirely free to anyone who wishes to take advantage of it. This service has been conducted for over 25 years and has helped hundreds of small timberland owners in successfully converting timber into money. Although this service is well established

and operates continuously, many timberland owners in this State do not yet know about it.

This marketing service consists of advertising timber, rough forest products and lumber for sale in a small bulletin that is issued several times a year. It is a means of putting the producer in touch with the consumer since the bulletin reaches many sawmill men, other buyers of rough products, wholesalers and wood using industries. There is no charge of any kind for advertising items in the bulletin or for any of the services rendered or questions that may be asked in connection with this marketing service.

In making a sale through this bulletin, some of the following questions frequently arise. What is my timber or logs or bolts worth? What is meant by FAS or 8/4? What is a No. 1 log? What log rule should be used in selling logs? These and all other questions are answered for we are interested in helping you to complete your transaction in as satisfactory a manner as possible because we know that if you can make a profit in selling forest products you

FARMERS

Centralizing Farm Credit Makes Politics Possible and Endangers Local Control and Cooperative Features

BY E. R. EASTMAN

THERE is grave danger that the vast Farm Credit service, with its great army of employees, is to be turned into a political machine, with the loss of its cooperative features, and used to further the schemes and controls of the United States Department of Agriculture.

Last spring President Roosevelt issued an Order putting the independent Farm Credit Administration into the Department of Agriculture.

Land Bank in each of these districts. More important still, the Act made provision for farmers themselves to establish cooperative National Farm Loan Associations. When a farmer wanted to buy a farm or borrow money on a mortgage, he took membership in his local Loan Association, and by pooling his credit with that of his neighbors he was able to borrow money on farm mortgages on a long-term basis, and at a reasonable rate of interest. His joint credit made it possible to issue Federal Land Bank bonds, which were sold to the investing public, thereby securing the money with which to make the loans to

But there is even more to this Farm Credit service than the Federal Land Banks. In 1923, the Farm Loan Act was amended to provide for the Intermediate Credit Banks, and in 1933 two more institutions were added, the Bank for Cooperatives, and the Production Credit Corporations and Associations. These are fully explained by the charts which accompany this article, which you will be interested in studying carefully.

The Production Credit System, which provides short-term credit to farmers, has also shown how badly it was needed by the rapidity with which it has grown. In the six years since they were organized, Production Credit Associations have increased to about 535, doing an annual business with farmers of about \$300,000,000. Taken together, the National Farm Loan Associations and the Production Credit Associations make the largest cooperative organization of farmers in the world. Because up to now they have been based largely on the cooperative principle, managed by farmers themselves, they have, more than any other one factor, enabled thousands of farmers to ride the disastrous (Continued on Page 12)

DO YOU WANT:

EFFICIENCY

INDEPENDENCE

Mortgage and production loans with no strings attached?

BUSINESS

Loans made by Farm Credit Administration on the basis of ability to repay?

OR

INEFFICIENCY

Farm Credit Administration employees hired on a political basis?

OR

DEPENDENCE

Mortgage and production loans dependent on borrowers' following crop control or supporting Department of Agriculture policies?

OR

CHARITY

Loans made regardless of ability to repay as has already been done by some government agencies?

So vigorous and emphatic were the immediate protests of farm organizations that the President and Secretary Wallace agreed in a public statement not to interfere with the independent features of Farm Credit work. They also agreed that the only change would be that the Governor of the Farm Credit Administration would make his reports now to the President through the Secretary of Agriculture instead of to the President direct. In December, just eight months after this statement was made, Secretary Wallace demanded the resignation of Governor Hill, with the statement that if he, Secretary Wallace, was to have the responsibility of Farm Credit, he insisted on having its entire management.

That precipitates a situation that is absolutely fundamental not only in Farm Credit but in the principles upon which America has built its success. As one farm leader stated, this grab of a great independent Federal Agency is the largest step taken so far by our government toward central control and European totalitarianism.

The only hope of continuing Farm Credit on the fundamental principles upon which it is based is that you farmers will be aroused to the situation and insist that President and Congress restore Farm Credit to its former independent position. If you have any doubt as to the seriousness of this situation, read the following brief history and description of Farm Credit work during the past twenty years, and the telegrams which accompany this article, showing what the farm leaders of America think about this change in the Farm Credit set-up.

The 1917 Act divided the country into twelve districts, and made it possible to set up a Federal

farmers, thus making it possible for farmers to stand on their feet.

Farmers Need a Sound Credit System

Well do I remember when I was a county agent in Delaware County, New York, calling a group of interested farmers together in 1917 to organize one of the very first National Farm Loan Associations. The Farm Loan Act had just been passed. We did not know many of the details, but we did know how badly credit was needed for farmers. Interest rates on mortgages across the country ranged anywhere from 6% to 20%. Moreover, these mortgages were often granted for such short terms that farmers were seldom ever able to pay them off within the term. So they often lost their farms in an effort to renew the mortgages. Farming is a long-term business. No one can expect to pay for a farm in a five-year period.

How badly a good Farm Credit plan was needed is shown by the rapid and tremendous growth of Federal Land Bank loans in a little over 20 years since the Act was first passed. During this period the Banks have made approximately 1,000,000 loans for \$3,000,000,000. In District No. 1, which includes New York, New Jersey, and New England—our own Northeast—Federal Land Bank mortgage loans have been made to approximately 45,000 farmers, with a total of more than \$120,000,000. One-third of the farm mortgage business in the United States is made through Farm Credit Administration.

In Terms of Happiness

Instead of cold figures, I like to think of this great service in terms of happiness to a million farm homes in America.

HOW FEDERAL FARM MORTGAGE CREDIT WORKS

The twelve Federal Land Banks, working with the hundreds of farmers' cooperative National Farm Loan Associations, have in the 22 years since they were organized helped nearly a million farmers with their mortgages, and have done it chiefly by borrowing money on bonds and debentures based on the farmers' own joint credit. Now, by Executive Order, this great non-political service is in grave danger. Refer to the chart below. Read the article on this page, and the emphatic telegrams from farm leaders.

BEWARE!

Leaders TELEGRAPH WARNINGS on Farm Credit Change

Best Credit System in World

by W. I. MYERS,

Former Governor Farm Credit Administration

Through sound but sympathetic operation the Farm Credit Administration has given American farmers credit adapted to their needs at lower rates than those available to any other class of citizens in the United States and at the lowest rates available to any farmers in the world. These rates cannot be reduced further by anyone except at the direct cost of taxpayers. The supervision of these credit institutions in which farmers have invested 130 million dollars cannot be merged with the other functions of the Department of Agriculture without destroying their cooperative structure and the safeguard of self-supporting operation. No experiment in reorganization can justify the jeopardizing of these institutions which have enabled American farmers to achieve credit equality with industry.

An Economic Crime

by L. J. TABER,

Master of the National Grange

National Grange believes future of sound cooperative rural credit demands it shall be under independent agency, and free from political pressure resulting from change of Secretary of Agriculture or other causes. American farmers have millions invested in this cooperative enterprise. It will be an economic crime to injure an institution as efficient as the Farm Credit Administration. National Grange will urge legislation

creating independent agency to secure efficiency and protect agriculture.

Farmers Dispossessed Without Process of Law

Telegram to President Roosevelt

by FRANK GANNETT, Publisher

By misuse of the powers vested in you by the Executive Reorganization Bill, the Farm Credit System created 20 years ago, largely financed and directed by farmers themselves by democratic processes, will become a political football.

About a million farmers and 1200 cooperatives with 1,160,000 members, Mr. President, have a vital stake in the integrity of their credit system. They have invested more than \$130,000,000 in the voting capital stock of the various banks in the system. Before the depression, the capital stock of the Federal Land Banks was 99½ per cent farmer-owned and today is still 47 per cent, and the announced intention of Congress was to permit farmers to regain their private control.

Now, notwithstanding Secretary Wallace's pledge to respect the autonomy of the Farm Credit Administration, the farm owners are to be dispossessed of their rights without due process of law.

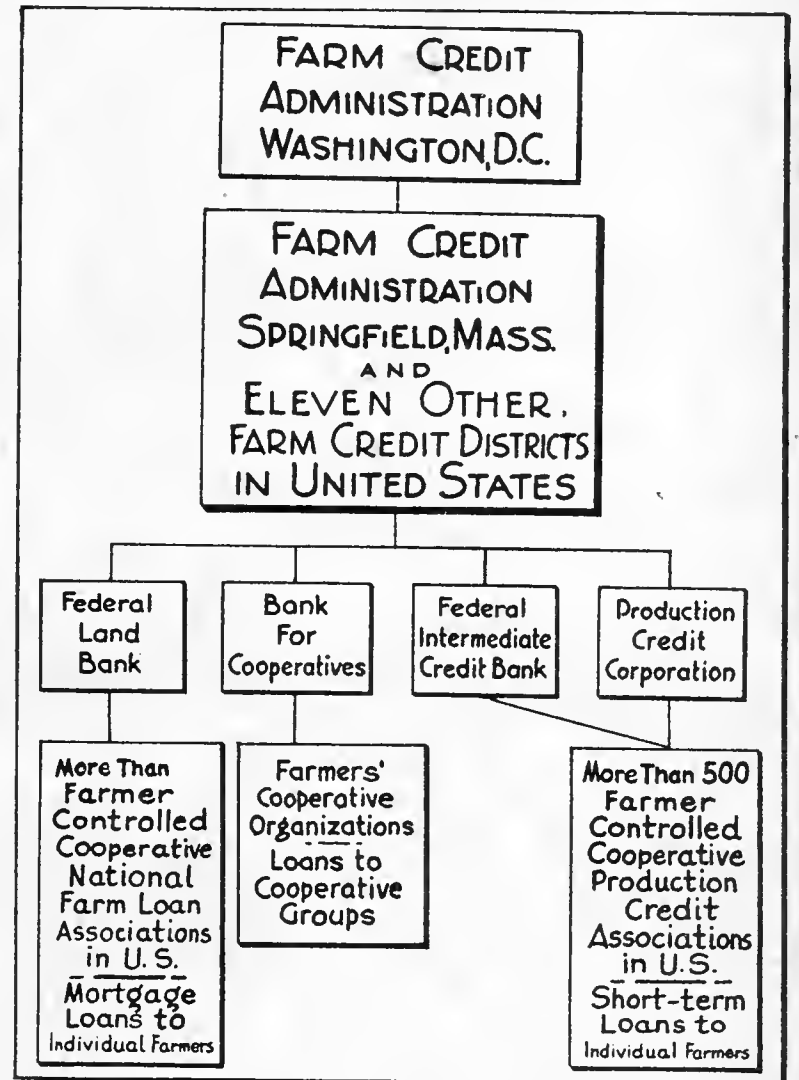

Last April you transferred the Farm Credit Administration, which was an independent Agency, to the jurisdiction of the Department of Agriculture. There was immediate protest from farmers and farm organizations. Their suspicions were allayed, and adverse action by Congress was averted by a public statement by Secretary Wallace, on May 22, which said that it was issued "with the concurrence of the President". In that statement Mr. Wallace said: "The Farm Credit Administration does not seem to be adapted to complete identification with the department (of Agriculture). The relationship involved can be handled best by a continuation of its present method of operation, with the Secretary of Agriculture exercising a coordinating supervision in only the broadest and most general way."

Furthermore, Mr. Wallace said that responsibility for carrying out the functions of the Farm Credit Administration would remain with the Governor. He continued: "It is true such controls and procedures that the head of the agency discharges is public responsibility. Therefore, to this extent the Farm Credit Administration will be an autonomous Federal Agency as heretofore."

Congress, trusting the pledged word of a member of your cabinet, did not disapprove your transfer of the Farm Credit Administration to the Department of Agriculture. The time for effective congressional action having passed, Mr. Wallace spoke through the lips of your secretary, Mr. Early. He declared that the Secretary of Agriculture "very naturally takes the position that if he is going to be responsible for it (the Farm Credit Administration) he ought to have control of it."

The Farm Credit Administration has been free from partisan and departmental politics. You deserve credit for the high qualities of the men appointed to it. With three billion dollars of loans outstanding without federal guarantees, these farm credit bonds have sold around 105. A total of three billions of long-time credit represents 40 per cent of loans to American agriculture. This record is largely due to the fact that it was an independent agency responsible only to Con-

HOW FARM CREDIT SYSTEM IS ORGANIZED

The Farm Loan Act of 1917 divided the country into 12 districts, and provided for one Federal Land Bank and many National Farm Loan Cooperative Associations in each district. Amendment to the Farm Loan Act in 1923 provided for 12 Federal Intermediate Credit Banks, one in each district, to help farmers, through their associations, with their short-time credit problems. In 1933 a new Farm Credit Act was passed, which provided for a Bank for Cooperatives in each of the 12 districts, and 12 Production Credit Corporations, one for each district, and for cooperative Production Credit Associations. This Farm Credit Administration, based on the principle of local control, cooperative action, and business loans, has been the most effective and helpful Federal agency in the service of agriculture. Its independence is now in danger by a transfer to the Agricultural Department, subject to political influence. Do farmers want this change?

* * *

Contrary to American Ideals

by W. J. RICH,

Master New York State Grange

The transfer of the Credit Administration from an independent agency to the Department of Agriculture I believe is a move in the wrong direction, and is bound (Continued on Page 12)

HOW PRODUCTION CREDIT WORKS

In 1933 a short-term Production Credit Association was added to the Farm Credit Administration to make loans to farmers on a short-term basis. The above chart shows how it works. It has been highly successful, because it has been conducted on business principles and by cooperation and local control. This service is now in danger by its transfer by Executive Order to the Department of Agriculture.

**MAKE SURE OF UNIFORM
FLAVOR IN DELICIOUS
HOME-CURED
MEATS WITH**

Sterling
T. M. Reg. U. S. Pat. Off.

SUGAR CURING MEAT SALT

VALUABLE PREMIUMS — In each 10 lb. can of Sterling Sugar Curing Meat Salt there is a coupon. This entitles you to secure—at about half the usual retail cost—a quality, carbon steel butcher knife, and a bell scraper for removing hog bristles. Get these time-saving tools for your next butchering.

STERLING SEASONING adds the right flavor to home-made sausage. Delicious, too, with roasts and stews, meat loaf, baked beans, poultry dressings. Buy it in cans containing 3 oz., 10 oz., or 7½ lbs.

STERLING TABLE SALT, PLAIN OR IODIZED — The generous size carton contains 1 lb. 8 oz., for 5c. Refined under the supervision of the Research Department of International Salt Company, Inc. The steam-sterilized salt has the tangy, zestful flavor of old-fashioned "salty" salt, with all modern improvements.

YOU cure meats on the farm for two principal reasons—to preserve the meat safely for later use, and to give it that delicious flavor that only home-cured meats can have. Make sure that your meats will keep safely. You will get a really dependable cure, when you use Sterling Sugar Curing Meat Salt. Here is a one-operation meat cure that was developed scientifically by the Research Department of International Salt Company, Inc. It not only saves time by curing, flavoring and tenderizing meats in one simple operation, but, in addition, it makes sure of uniform flavor. That is because Sterling Sugar Curing Meat Salt is uniform itself. It contains the highest quality meat curing salt, choice spices, saltpeter, flavory brown sugar and smoky flavor, according to the formula of the International Salt Research Department. Make sure of success, of delicious flavor. Ask for Sterling Sugar Curing Meat Salt by name. Buy it in cans of 2 lbs. 2 oz., or in 10 lb. cans, enough to cure up to 100 lbs. of meat.

★ ★ ★ ★

WHITE GOLD FOR THE FARMER'S PROFIT!

Experts say that salt does more for the farmer than anything else bought for profit on the farm. That is why it is called "white gold". Adequate and proper salt feeding means better live-stock—increased milk production, fatter hogs, healthier calves, and more energy and stamina in work animals. The Research Department of International Salt Company, Inc., will answer any questions and problems about the use of salt on the farm.

Larger Grasses for PASTURE

By FORD S. PRINCE,
New Hampshire College of Agriculture.

THERE is much interest among dairymen in the northeastern states in larger species of grasses for pasture. Timothy, orchard grass and smooth brome grass are being used to some extent in permanent pasture seedings, but the net result of a few years of pasturing is the gradual disappearance of the larger grasses with a corresponding increase of Kentucky bluegrass in the sward.

Research on how to maintain a stand of these larger and more productive grasses is now under way at various points in the world. German investigators have found that the lack of development of basal leaves in a grass is the cause of its disappearance under pasturing, while a species with an abundance of lower leaves will survive and eventually occupy the major proportion of the sward. On the other hand, if the same sward is managed for hay it has been found that the larger species crowd out those whose greatest leaf area is near the ground.

Utilizing these facts and applying them to pasture conditions, workers at the Welsh Plant Breeding Station have demonstrated that these larger grasses can be maintained in the pasture stand if it is properly managed. On plots seeded alike with orchard grass, perennial rye grass and wild white clover, but pastured differently, orchard grass excluded all the rye

grass on one series in four years, while in another there remained practically a pure stand of rye grass and wild white clover. The orchard grass plots were pastured heavily from February to August, then rested the remainder of the autumn, and those ending up with rye grass were grazed the entire season, although grazing was always well controlled when practiced.

This seems to be ample proof that a larger and more productive grass can be maintained in the stand if farmers are willing to control their grazing sufficiently so that at some time during the year this grass has an opportunity to gain the ascendancy over the smaller species that naturally are better adapted to continuous grazing. It may be that by using these large grasses in separate fields each one can be held as an identity in its own location.

A little more study is necessary to establish how much grazing each of these larger grasses will permit, at what period they should be rested, and the like. But it is certainly a possibility, one that deserves the attention of farmers and research workers alike. And if at the same time, these more productive grasses are improved by selection and breeding so that they develop into strains that are more resistant to pasturing, better grazing conditions will soon come to our northeastern dairy farms.

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange

HEMLOCK GRANGE at Portland, Connecticut, furnishes ample evidence of reasons why Grange work throughout the country is so prosperous. Necessity for more extensive repairs on the Grange hall than there was money to pay for, caused the members to decide that a good share of the work could be done by themselves without cash outlay. In consequence a big force of men tackled the job and now the Grange has an enlarged dining-room, a much better equipped kitchen, new rest rooms, dressing-rooms, and other conveniences. One night saw 36 members hard at work on various phases of the job. In addition to the visible results, a splendid spirit of teamwork has been developed, which will prove its value in many other directions of the coming Grange year.

★ ★ ★

RHODE ISLAND welcomes back into active Grange leadership a former State Master. C. Palmer Chapman has been returned to the executive committee of the state organization. Mrs. Chapman is state lecturer and the two constitute a wonderful team of Grange leaders and workers.

★ ★ ★

ELECTIONS in three New England State Granges saw Messrs. F. A. Richardson of Maine, W. J. Neal of New Hampshire and E. W. Stone of Massachusetts returned to their positions in the master's chair for another two years. Rhode Island and Vermont

had no election this year and the Connecticut session is not due until January 9-11. The New York State Grange has a new master, State Overseer, W. J. Rich of Salem having been promoted as the successor to Raymond Cooper of Oswego.

★ ★ ★

THREE recently organized Granges in New England are Island Lake in Essex county, Vermont, with 49 charter members and Chairman E. M. Farr of the executive committee of the State Grange the organizer; Cohasset in Massachusetts, with 79 charter members and former State Lecturer B. T. Mowry the organizer; Whigville, located in the town of Burlington, Connecticut, organized by Deputy Kingsley Beecher and instituted December 5 by State Master E. L. Tucker, with 27 charter members. Maine also reports a new subordinate, Osceola, No. 570, located in the town of Harrington and organized by Deputy R. S. Salsbury.

A REMARKABLE RECORD of continuous Grange service was recently brought to light at Tuftonboro, New Hampshire, when Charles E. Hersey, a

(Continued on Page 18)

TRAINING A Cow Dog

By OUR READERS.

WHILE I am not a professional dog trainer, I have in the last forty years trained several good cow and watch dogs. First, choose the most active and mischievous pup in the litter, one with plenty of spunk. Spend the first six months in gaining its attention, confidence and affection. Avoid much playing with pup during this time, but talk to him as to a boy. Avoid scolding or severe punishment as the heart of a collie can be easily broken, and this will render him useless.

Do not crowd him into service too young, but at the same time see that he mingles with cattle in barn and pasture. Let him watch you handle stock, and take him with you when driving cows, preferably on leash. This will prevent his being kicked, causing him to become a head driver instead of a heel driver as he should be. See that he obeys each command, and don't fail to praise him for every good deed he does. Be quiet and patient while handling both dog and stock. Encourage him to be a slow driver, as a dog that runs stock, in my opinion, is worse than no dog at all. Never lose your temper when breaking a young dog.

With the above few suggestions and a bright pup to start with, I have no doubt but that you will develop a fine cow dog—one that will be an asset to you and the envy of your neighbors.

—CHARLES C. TRAVIS, Windsor, N. Y.

* * *

Keep Him Eager

I have trained several cow dogs. I was raised on a farm. The best two breeds are Collie and English Shepherd. The right way to train a cow dog is to wait until the pup is around eight to ten months old. Then put a collar on the dog, attach a light but stout cord, and go with the dog behind the cows. Keep the dog on the leash, start the cows, and tell the dog to "sic" them or take them. Always keep the dog back with you. If he tries to go ahead of the cows, pull him back to the rear. Do this again and again until you are sure he is trained to stay in the rear. Never whip him! If you pull him back to you, he will understand that is what you wish him to do. Always pet the dog when he tries to do as you ask him. Whipping will spoil this breed of dogs.

Keep the dog so he will be eager to go with you. After each time, give him something he likes to eat and pet him. Every time say, "Come on Jack (or whatever his name may be.) It is time to get the cows." If you are kind to him and praise him, it will not be long before he will go alone and get

them, and he will not go to the front of them either.

When a young man I had a Collie which I cow broke. We refused one hundred dollars for him. He was also a trained sheep dog. If my code is followed, anyone that is kind can break a dog to be a No. 1 cow dog.—DR. JOHN L. JOHNSON, Horseheads, N. Y.

* * *

Imitation

Here is the way I trained four dogs. They were Shepherd and Collie mixed. We got them when they were tiny pups, and every morning and every evening when we went for the cows, we would take them along. We also took along an older dog. We would tell the big dog to heel the cows and "sic" the little fellows to do the same. If they grabbed the cows any other place, we would call them off and start them again.

They gradually got to know just where to get them, and after awhile, they could pick out any cow you might want. Never scold or whip dogs over their mistakes. We have had wonderful luck training our cow dogs this way.—M. HERRMANN, Cherry Valley, N. Y.

* * *

Know More Than the Dog

In the first place, I would never let the dog sleep in the barn with the cows. They get too familiar. (Editor's Note: Apparently this suggestion is open to argument. Other letters say the reverse is true.) Then, when training him, I would always have him on a leash so he could not run to the cows' heads, and he will soon learn to be a heel driver.

When you want to teach a dog to round up cows or sheep, run with him on the leash until he knows what you want of him. We have had dogs that would yard cattle or sheep right in the middle of a large field so you could sort out the ones you wanted to. Do not let the dog get hurt by the cattle when it is small.

It takes patience, and you have to know almost as much as the dog. You cannot help but wonder sometimes when you see a dog if the trainer really did know as much as the dog.—LEROY BAKER, Lawrenceville, Pa.

* * *

Young Trainer

I am a boy 13 years old, live on a farm, go to school in Malone and am in the 7-A grade. Six years ago next March my father had a female dog that brought us a litter of puppies. I picked out one for myself. He is half Collie and half German Police, black with yellow markings, and is as good a cow dog as anyone could ask for. He will go when sent to chase the cows and stop when I call him. He is not too harsh.

When he was a little puppy three months old, I would take him with me (Continued on Page 11)

"Our Greyhound dog plays with her and gives her the darndest ideas!"

FAST MILKING *DOES* GET MORE MILK!

and **Surge**

IS THE *FASTEST* MILKER EVER BUILT!

SURGE MILK TRAVELS ONLY 4 INCHES INSTEAD OF 4 FEET FROM TEAT TO PAIL. JUST 4 PIECES OF RUBBER TO WASH

Authorities agree that faster milking *DOES* get more milk—and Surge is the fastest milker ever built! NO claws. Surge

uses rust-proof, easiest-to-clean STAINLESS STEEL in every metal part touching milk. Surge's exclusive Adjustable, Variable Pull feature enables you to do a faster, cleaner, more profitable job with less labor. Sold on Easy Terms.

NEW *Surge* MILK COOLER

"Shrouded Air Current"

Surge SHROUDED Milk Cooling Unit—Complete with Steel Cabinet

Surge's proved superiority has come about through an exclusive new cooling principle... SHROUDED AIR CURRENT which puts every bit of air to work cooling the entire condenser and greatly increasing the efficiency (explained in our catalog).

BIG ICE RESERVE keeps the cooling water ice-cold and cools the milk faster.

FACTORY SEALED COMPRESSOR UNIT comes to you ready to run. Does not require a refrigeration engineer... Factory adjusted for maximum efficiency and can be installed in Factory-Made Steel insulated tank or your own insulated concrete tank. Sizes: 2 to 30 can capacity. Learn how easy it is for you to own and operate one. Mail coupon!

Threshing beans with a combine in the Salinas Valley, California.

Growing Fruit and Vegetables in the Far West

By PAUL WORK

COMMERCIAL dry bean growers of New York State would find some things to look at on a visit to the Salinas Valley in California. This is probably the greatest single vegetable growing area in the United States, lettuce and carrots being the main crops with many other vegetables in the list. Dry white beans are grown on the intensive vegetable lands and also on bench land a little above the best of the truck crop soil. The fields are huge, some over 100 acres.

The variety grown is called California Small White. This is whiter and smaller than the Robust. Harvesting is put through in a very simple and businesslike fashion. Vines are cut and thrown two rows together. Then a side delivery rake consolidates these into windrows of six or eight rows. Then comes the huge tractor-drawn combine. This picks up the plants and thrashes out the beans. There is a recleaner on top which mills out only 3 to 5 per cent. There is no hand picking. Capacity runs about 100 bags of 100 lbs. each per hour.

It is no wonder that Eastern bean growers find Western competition something to think about!

BERRIES IN WASHINGTON

WHEN we passed Mt. Rainier on our westward trip and came down to the coastal plain we soon discovered that we were in a country where berries (blackberries, raspberries, and a number of other cane fruits) were very much at home. The Western Washington branch Experiment Station at Puyallup has been carrying on bush fruit work for a number of years.

Blackberries are widely planted for fresh market, canning, and freezing. They are trained 'on high trellises a good deal like the grape trellises of Western New York. Some put a cross bar at the top of the post at right angles to the row and then string additional wires on these bars. The cane growth is tremendous and the berries hang so thickly that they look like the pictures in old fashioned garden catalogs. One important variety is the Oregon Evergreen which traces to a wild form with a deeply cut leaf quite distinct from the Eastern blackberries.

As in the East, mosaic is a serious problem with raspberries. The variety Washington has been bred at Puyallup for resistance to this disease.

The stores commonly offer five or six kinds of berries on a given day. Young and Boysen berries are rather similar, with large berries and much

larger drupelets than our Eastern forms. These are very tender and hard to handle in marketing. They are ordinarily sold in pint baskets as wide as a quart basket but shallow.

The loganberry parts from the receptacle like a raspberry, has red foliage, and a suggestion of raspberry flavor. Thornless strains of a number of these berries have been developed.

In California, strawberries are on the stands every month of the year and they are generally good. Marshall is the leading variety, with Klondyke of major importance in most of California.

BLUE LAKE

CANNING crop growers of vegetables would presumably not be very receptive to growing cannery beans on a trellis. Even without the trouble of setting posts, stringing wires, and tying up with twine, we figure that the return from cannery beans hardly meets expenses. However, most of the beans that are grown for canneries in the Northwest are handled in this way.

The variety is Blue Lake. This is a strain of the old, Early Striped Creaseback, a pole bean that is round podded, tender, and of excellent quality. It is very fleshy and stringless until past the good eating stage.

The price paid canners and freezers is about the same as in the East, between \$50 and \$60 a ton, but yields under the training system are vastly larger than in New York, eight to ten tons per acre being fairly common. The cost of picking is about the same as with us—around 30 or 35 cents a bushel.

Most of the beans for market on the West Coast are also pole beans. Newer strains of Kentucky Wonder and the Blue Lake are the most common. My family, I fear, will be hard to break into the old time varieties when we return to the East. We have, of course, had good home garden beans, pole beans, for a good many years, Scotia and McCaslan being among our favorites.

Eastern growers and canners would probably do well to look into the Western methods.

MIGRANTS

EVEN though I have spent four months in California, I would not think of appraising the much publicized farm labor situation in the state. Most of the people who write about it
(Continued on opposite page)

NEW 4-WHEEL TRACTOR at LOWEST FACTORY PRICE !

A NEW, all-purpose tractor, which costs little more than some of the walking type garden tractors, has been announced. It comes in 5 and 8 H.P. sizes and will do all kinds of farm work. Engine is air-cooled. It has an automobile type gear shift with three forward speeds and reverse. Travels less than one mile per

hour for close cultivating and will do 7 miles per hour for road work. Plant clearance is 16 inches, the turning radius only 5 feet. High arch model has 24 inch clearance. The rear wheel tread is adjustable from 17 to 30 inches between tires. Engines can be equipped to use kerosene or fuel oil and will operate for 3 to 4 cents an hour. A factory-to-farm sales plan makes it the lowest priced, complete, riding tractor on the market. This manufacturer also offers a complete line of garden tractors, both walking and riding types, from 2 to 5 H.P. Complete information and prices may be had by addressing The Shaw Mfg. Co., Dept. 1001, Galesburg, Kansas; 668-N North 4th St., Columbus, Ohio; 5812-N, Magnolia Ave., Chicago, Ill., or 130-N, West 42nd St., New York, N. Y.

(Continued from opposite page)

have an ax to grind one way or another, and an unbiased observer would have to spend a great deal of time and travel and see a great many people in all walks of life before he could really size up the situation.

One does get many interesting sidelights. There are, doubtless, places where abuses such as those described in "Grapes of Wrath" can be found. On the other hand, one of my most interesting experiences was to drive for a little while through a village of about 5,000 people, unincorporated, which lies just east of the city of Salinas. It is known by various names—East Salinas, Alisal Township, Oklahoma City, and Okietown.

Some years ago this area was open field. A little later there were a good many tent habitations. Then these people, once migrants, acquired a little lot, perhaps built a garage on the back and lived in that for a year or two, and then built houses, simple but comfortable. It gives the impression of a wholesome, working-class residential community.

An interesting light from this same place is found in the story that the county was pressed to pass a plumbing law which would require inspection and union labor as is usual in our cities. The residents, who are thoroughly unionized, most of them working in the packing houses at Salinas, rose in their might and would have none of it. They preferred to buy their plumbing "mail order" and put it in themselves.

When Farmers Sell Timber

(Continued from Page 3)

will be interested in growing more and better timber.

Because the question concerning log rules is so commonly asked, a brief explanation here seems desirable. In my opinion, it makes no difference what log rule is used provided the seller understands that different rules will scale different amounts and that these amounts will vary with different diameters. This College has literature to show what amounts will be given by the different rules used. In the end it makes no difference what rule is used because the buyer who understands these rules knows what he can afford to pay when buying by one rule or another. The Doyle rule is commonly used in this State but the owner will make no more or less money in selling by this rule than any other.

If you have timber or forest products in any form which you wish to sell, we will be glad to advertise this for you in our marketing bulletin and we will be pleased to answer any of your questions in connection with this harvesting and marketing business.

If you wish to receive these marketing bulletins regularly, write and ask to be placed on the list to receive them. If you have material to sell, we will be glad to advertise it upon hearing from you. Tell your friends, for the more people who know about it the greater will be the service we can render to all concerned. For any information or requests regarding this service address Professor Raymond J. Hoyle, Wood Utilization Service, The New York State College of Forestry, Syracuse, N. Y.

Book Review

THE TEN SECRETS OF GROWING MELONS, by James S. Morse. This is a 20-page pamphlet by a practical grower of melons but one who has also made carefully study of the best methods available. In addition, he is a careful observer who has made a good many observations of his own. If you are growing melons, you will find this very helpful. The price is 50c. It can be ordered direct from Mr. Morse, Levanna, N. Y., or through American Agriculturist.

Plenty of Potash!

POTASH supplies are adequate. The situation concerning this necessary plant food is very different from that brought about by the last war, when this country was dependent upon importations which were suddenly and completely terminated. During the intervening years, discovery of potash deposits in this country has led to the development of a domestic industry capable of expansion to meet the requirements of American farmers. Therefore, wherever profitable yield and quality of crops demand plenty of potash, the proper amount should be used.

Consult your county agent or experiment station about the fertility of your soil and what fertilizer you should use. See your fertilizer dealer. You will be surprised how little extra it costs to apply enough potash to insure good yields and high quality. Write us for further information and free literature on growing profitable crops.

Veto Power Gives Milk Producers *the Right to Say "Yes" or "No"!*

UNDER the present Rogers-Allen law which makes possible the Federal and State orders, milk producers are FREE to make their own decisions.

Under this law which has provided so much benefit for producers in this milk shed, producers are not required to be "yes men." They have the right and the power to say either "YES" or "NO."

This veto power . . . this right of final decision . . . was placed in producers' hands under the wise guidance of the milk co-operatives. It is one of the most important provisions in the Rogers-Allen law. And it is a point which has been overlooked by a great many milk producers.

Specifically, it provides that 51% of the producers MAY CHANGE THE LAW, or they may ELIMINATE IT ENTIRELY.

Since 51% of the producers have the right to change the law, we also have the chance to make it more

nearly perfect from time to time. With so much good having come to the milk producers from this law, isn't it just good, plain horse sense that we continue under it, striving constantly to make it work better for all producers?

The Dairymen's League, who have been carrying on this fight for nearly a quarter of a century, are devoted to the cause of a better standard of living in our farm homes. We firmly believe that since the VETO power is left in the hands of the producer, we should all give it our whole-hearted support during the coming year. If there are ways in which we can make it more certain that the farmer keeps control of his milk, let's collectively search for those better ways.

Above all else we are winning a great fight. Let's hold fast to what we have.

**Published by the Thousands of Farmers Who Own, Operate and
Control The Dairymen's League**

DOWN THE

Alley

By J. F. (DOC) ROBERTS

CAN you see any difference in the two heifers pictured on this page? Born within two days of each other, one was grown and handled the economical way, or the way they can be handled on any farm in the Northeast. The other was grown and fattened the corn-belt way, or the uneconomical way for the Northeast, and yet they were both bred and born, fed and grown in New York State.

Mr. Clayton C. Taylor of Lawtons, N. Y., the owner of the Dancote Herd of Aberdeen-Angus cattle, reports that Esther 2 of Dancote, the heifer on the left, was born on May 10th, 1938, and Iola 4 of Dancote, the heifer on the right, was born on May 8th, 1938.

Esther is the calf that was fed the uneconomical way, and she weighed 575 lbs. on Feb. 1st, 1939. Iola was fed the Northeast way and she weighed 570 lbs. Up to this time, the only grain either of these calves had had was two or three pounds daily from November 1st to February 1st. At that time, Esther was put on full feed and was fed 10 to 12 pounds of grain daily to about September 12th, but Iola was only fed 2 to 3 pounds daily, until she was turned out to pasture on May 5th. After that, she did not get any grain, but on September 12th, Esther weighed 860 pounds and Iola 790.

If you will compare the cost of Iola's 790 pounds, against Esther's weight, you will very readily see the value of our Northeast pastures, and Mr. Taylor's pastures are not any different from the average. On top of that, since September 12th, Esther's grain has been cut down to 3 or 4 pounds daily, and Iola now weighs just about as much as Esther. So again, with good use of silage, hay and pasture, and a comparatively small amount of grain, we have an animal almost exactly as good as we have with the more expen-

sive grain ration. In fact, I am wondering how many of you picked the right heifer as the Northeast heifer.

Right in the same connection, on a lamb tour in Michigan, which some of our Northern New York lamb feeders attended, they were struck by the very small amount of hay which the Michigan men were using in their lamb feeding operation, even going so far as to say that if they fed lambs the same way, and with the amount of hay which they have, they could be feeding three times the amount of lambs they are in Michigan. This again brings out the advantages we do have in a livestock way here in the Northeast. Therefore we should avail ourselves of the roughage we have, and feed our livestock accordingly, rather than to imitate corn-belt feeding operations. On this tour in Michigan, I saw a great many lambs which were all ready to come to market. In fact, some of them were too heavy now, and I cannot but feel that we will have too many lambs on our markets through January and possibly early February, with too few during March, April and May. Fortunately, most all of the lambs going into New York State this year have been light lambs and will not be ready for market until late in the season. We also saw a great deal of corn in outside cribs, in fact, most everywhere, but the report seems to be quite general that a great deal of corn, maybe as high as 30 or 40%, which has been sealed by the Government is going bad and will not be of use for feeding purposes. If this is true, perhaps we can better understand advancing grain prices.

Training a Cow Dog

(Continued from Page 7)

to get the cows. I had a little rope on him. When I chased a cow, he would nip its heels; and gradually he would go alone when told to do so. Now we stay at the barn, and he will drive the cows to water in the pasture. Then when I say, "Go get the cows!" he goes and brings them all back.

He is also a good watch dog. I will defy anyone to try to fool with me when he is around. He used to draw my sled with me on it and give me some nice rides, but now I am too heavy for him. His name is Rover.—LEONARD TROMBLEY, Malone, N. Y.

Must Have Brains

The first thing to do is to break your puppy to mind when he is young. If it is in the summer, take your dog with you when you go after your stock. Round up the cows, keep behind them, and drive them home. Be careful not to let your dog get kicked for that has spoiled many a good dog.

Do not try to get your dog to work. When he gets ready, he will start himself—if he has any brains. If he never starts, you might as well shoot him. However, do not be discouraged if he does not start when you think he should. About the best dog I ever saw never started until he was a year old. I thought he never would, but he made a great dog.—H. SUTHERLAND, Sidney, N. Y.

"Well, you guys are always in my pasture!"

IN THE COWBARN WINTER DRIVING IS ALL UP-HILL

Changing the feeding plan
for winter... as important
as winter oil in your car

A cow's milk-making machinery is just like the motor in your car. What is good practice in summer will "stall the works" in winter. Digestion and assimilation come in for a terrific strain during barn-feeding. Feed is heavy and dry; there's no succulent pasturage, fresh air or exercise. Health hazards are at a peak. Yet the milk-yield must keep up if costly winter diet is to return a profit. No wonder many cows slip out of the earning column, while nature is fighting to maintain bodily health first.

The secret of winter-dairy success is in a program that will put digestion and assimilation on a rebuild-as-you-go basis. The *unnatural* winter stress calls for definite medicinal aid to discourage waste of costly feed. KOW-KARE is designed for just this job. It is a medicinal feed-supplement that promotes vigor to help cows carry extra loads without excessive hazards. Thousands of successful cow owners have demonstrated the worth of this medicinal feed-supplement, which costs so little to provide.

Why KOW-KARE Works as it Does

KOW-KARE is a scientific compound of iron, iodine and valuable roots and herbs well known in medicine as Tonic, Stomachic, Carminative, Laxative, Diuretic, Alterative, Stimulant and Mineral-Replacement. Fed with the grain, this formula promotes healthy functioning of the productive processes, getting the most out of the feed... just as the right oil in an engine gets the best mileage from the gas. Throughout barn feeding, and before and during calving it pays to provide this proven aid toward better yields and healthier cows and calves. KOW-KARE is sold by feed dealers, general stores and druggists. Or, we will mail, postpaid.

FARMERS BEWARE!

(Continued from Page 4)

sea of the depression, and to come through on their feet. That is something to be proud of; something certainly to fight for and to save!

What are some of the principles that have made Farm Credit so successful?

1. Freedom from Politics

Politics have been kept out of the Farm Credit Administration. Up to now the highest to the lowest employee in Farm Credit work, whether in the Washington office, the District banks, or as officers and secretaries of the local associations, have been hired on their merits, and not because they were good Democrats or Republicans. That one factor has been in large part responsible for the high service of Farm Credit work. I know of no other personnel in either department of government or private business that excels the efficiency of the operators of Farm Credit work across the United States. And when it comes to the farmers themselves in their local associations, the officers and directors of the Production Credit and the National Farm Loan Associations are the best there are in the localities. They are there, as are the employed officers in the District banks and in Washington, not because they are good politicians, but because they are efficient workers. Are we to substitute for these men others who are good Democrats or good Republicans first and then perhaps good operators afterwards?

On the contrary, few employees, outside of Civil Service, be they high or low, no matter what their qualifications, can today secure a position in the United States Department of Agriculture without the approval of some political boss.

Behold the absurdity, the danger, of some local politician passing upon the qualifications of a highly technical expert in agriculture or Farm Credit! From now on, unless you farmers do something about it, the employee in Farm Credit can be hired on the principle of whether he is a good Democrat or a good Republican instead of on whether he is a good Farm Credit man. I care not whether that politician be Republican or Democrat. It is a rotten system. Think of the vast political machine into which the Farm Credit of America can be made by any Administration even though the present one does not do it! The independence of Farm Credit must be restored!

2. Loss of Local Cooperative Control

Farmers of America may as well wake up one time as another that they have two choices from here on, and only two, so far as the management of their public business is concerned. First, they can let government run more and more of their business, including eventually their own farms, or second, they can run their own farm business as individuals, and their public business working together with their neighbors in cooperative organizations. Which is it going to be? For a pittance of a few dollars farmers are permitting so-called government experts more and more to edge in on the management of their farms. It is the easiest thing in the world when a man, an institution, or a government loans money for them to insist on how you shall spend that money. Farm Credit

heretofore has not done too much of that. Its management has consciously tried to keep from doing it. But the Agricultural Department of the United States is telling the farmers of this nation what to do and how to do it, and they are holding over those farmers the threat of withholding a few dollars of government subsidy if that program is not obeyed. The same thing may happen with Farm Credit.

One of the chief reasons why the Farm Credit work has been so successful in the United States is that it was based on the cooperative principle, not on government control. The government part in the program was supplementary, and it was insisted that most of the responsibility be taken by the officers of the local associations. Farm Credit was started and has been run on the business principle of the farmers furnishing their own credit and not depending too much on government subsidy. During the depression some subsidy has crept into the Farm Credit System, but up to now it has been the intention and the ideal of the leaders and of the farmers themselves eventually to take government subsidy entirely out. With some years of prosperity, which we all hope are ahead, this would have been possible if Farm Credit had been continued as an independent agency. It will not be possible if farmers are willing to trade the cooperative principle upon which Farm Credit has heretofore been run for more and more government control and subsidy of their business. It will not be possible if farmers are willing to trade their freedom and their souls for a mess of pottage!

3. Business vs. Relief

Up to now Farm Credit work has been strictly a business proposition. Money could not be borrowed by anyone either on a mortgage or a short-term basis except on business principles, and on the likelihood that the money would be paid back with interest. It could not be otherwise, for much of the money belonged to the farmers themselves. Every time a farmer failed to pay off his mortgage the Farm Loan Associations, and the farmers who belong to them, were the losers. To be sure, the loans were made and collected on a basis of sympathy and understanding. Neighbors made the loan, and they knew better than anyone else whether the loan could and should be made. What is more important, they were made on the basis of a low rate of interest, and on long term of years in which to pay them back. Nevertheless, loans had to be paid back some time. That made Farm Credit a business, and preserved the respect of the American farmer. In making loans to a neighbor, directors of local Farm Credit Associations have also considered carefully the character of the applicant, and have taken into consideration the old fundamental "his word is as good as his bond." Do we want to lose all of this? Plenty of mistakes have been made. Who could foresee in 1929 that we would have ten long years of a desperate economic situation on farms? But nevertheless, it has been a fundamental principle of Farm Credit that the worst thing you can do to a man is to loan him more money than he ever could hope to pay back.

Under the new set-up it will be possible to take Farm Credit out of business and put it on relief. In fact, many

farm leaders believe that this is exactly what Secretary Wallace intends to do. It is certainly what the Department of Agriculture already has done in many of its loaning activities to farmers. In short, for more than twenty years the Federal Land Banks, and more recently the other forms of Farm Credit, have been doing a great job in helping farmers and their families to continue in business and their life and happiness on the old farm. Now, farmers of America, the whole people, and Congress itself faces a decision as to whether or not this Farm Credit service is to be continued on the sound businesslike principles that have made it successful. What would happen to the farmers' credit if after the cooperative features in the System were destroyed some future Administration decided that there were no longer monies available for subsidies out of the government treasury? Where would you be with neither subsidy nor credit? Dependable credit, especially in bad times, is absolutely vital.

4. Increased Taxation

Not the least of the dangers which may result from the transfer of the independent Farm Credit Administration to the Department of Agriculture is the likelihood of increased taxation. Up to 1933, Farm Credit work was largely self-supporting. Because of

the emergency, the amended Act in 1933 provided for more government subsidy in Farm Credit. But much of the money for loans to farmers is still secured by farmers themselves by selling bonds and debentures on their joint credit through the National Farm Loan and Production Credit Associations. Do farmers want to lose this by having the System entirely subsidized and paid for by taxation out of the United States Treasury? If I know the spirit of the American farmer, the answer is emphatically "No".

But even more is involved than just Farm Credit. The future success of this Nation, the last stronghold of real democracy in the world, depends upon our stopping, before it is too late, the rapid centralization of power into government. The grab of Farm Credit is the latest and worst example of such centralization.

This serious situation comes right down to this question: Are farmers willing to trade their right of self-determination, of individual action, of local control, of freedom from politics in their business, receiving in return some very questionable temporary advantage? It is up to you to make your own decision as to what is best for you, your children, and for America, and then to tell your Representatives in Congress and the President of the United States what you think.

Leaders Telegraph Warnings on Farm Credit Change

(Continued from Page 5)

to bring injurious results to agriculture. It is another step in the direction of centralization of power and contrary to American ideals.

* * *

Change Dashes Hopes of Farmers

By FRED H. SEXAUER,
President, Dairyman's League Cooperative Association.

For generations farmers have looked forward to the establishment of a national farm credit system fitted to the needs of agriculture, controlled by farmers, divorced from politics. In the Farm Credit Administration as originally set up and administered they saw the eventual accomplishment of their goal. They were gradually but enthusiastically investing the necessary capital to gain control. This action of merging the national Farm Credit System into a Department of government controlled by Cabinet appointees who will change with every new Administration dashes the hopes of farmers that the Farm Credit Administration can be kept a non-political agency serving the credit needs of farmers regardless of political creed. I hear nothing but resentment and bitter disappointed expression by farmers over this change.

* * *

More Government Control

By HERBERT KING,
President, New York State Farm Bureau Federation.

The change in the administration of Farm Credit and its correlation with other activities of the agricultural administration, will almost surely make Farm Credit much more dependent on government aid and will make it practically impossible to build a credit agency for farmers on a sound business basis that would have access to the big money markets and that can be owned and controlled by farmers.

For nearly twenty-five years the farmers of this country have been building such a credit agency and have invested about \$130,000,000 in it, ex-

pecting that the time would soon come when government help would not be needed and government control could be eliminated. The correlation of Farm Credit with the other activities of the A.A.A. and the loaning on a charity basis which the A.A.A. is carrying on, even though in itself may be worthy, is sure to mean more government aid and more government control and a long step backward in building up an independent cooperative credit agency for farmers.

* * *

Change May Depress Bond and Debenture Market

By H. L. KOKERNOT,
Rancher and Farm Leader,
San Antonio, Texas.

Realizing policy of sound credit has enabled agriculture to obtain loans at low interest rates, ranchmen of Southwest fear change will result in depressing bond and debenture market thereby losing gain made, and will use every possible influence to have Farm Credit Administration returned as an independent agency of government.

* * *

Management Should Be Left in Hands of Farmer Owners

Resolution of New Jersey Farm Bureau, forwarded to President Roosevelt by H. E. Taylor, Secretary.

The Farm Credit Administration was originally organized as a cooperative institution for farmers to finance their business. Since they have already invested a definite percentage in proportion to all loans granted, they are the majority shareholders of the Federal Farm Credit Administration.

Therefore, it would seem not only desirable but fair that the administration should be left in the hands of the majority shareholders. Recent changes have been made without their knowledge.

In view of recent changes made without consideration of these interests, we respectfully urge that the Farm Credit Administration be returned to an independent Federal authority reporting only to the President and Congress.

NORTHEASTERN *Slants* ON THE *National* NEWS

Federal Debt Approaches Limit

THREE choices are open to Federal Government and American public—less spending, more taxes, or increase in federal debt limit now set at \$45,000,000,000.

One Washington report hints that President is reconciled to a \$3,000,000,000 deficit during the next fiscal year. With debt limit at \$45,000,000,000, the recent federal debt of close to \$42,000,000,000 indicates that present debt limit will be reached before end of next fiscal year.

Gossip is that President's annual budget message, due soon, will ask for \$9,250,000,000 to meet government expenses for year beginning next July 1, at same time forecasting tax revenues of about \$6,300,000,000. Included in budget are increases for national defense from about \$1,500,000,000 to \$2,000,000,000 next year. Relief funds are claimed due for slash from \$1,500,000,000 to about \$1,000,000,000.

Tax increases are notoriously unpopular with politicians in an election year. Federal job holders number 939,000, largest total in American history. There is little real evidence from Washington of intention to curb spending, and taxpayers will not look kindly on an increase in the federal debt limit. Result is a jigsaw puzzle badly in need of solution.

Labor Relations Act Needs Amending

THOROUGH "going over" of National Labor Relations Act and Labor Board which has been administering its provisions is being given by special investigating committee of House of Representatives. Much testimony already heard indicates Labor Board favors unions in disputes with employers. Representative Healey from Massachusetts states his belief that the inquiry will help clear up the atmosphere around the whole situation.

Practically unanimous is demand for amendment of National Labor Relations Act, although little agreement as to kind of amendment is evident. Labor unions, particularly C.I.O., want criminal penalties for employers who violate the Act. The American Federation of Labor wants a new five-man Board to administer the Act and more protection for unions affiliated with the A. F. of L.; while the National Association of Manufacturers and U. S. Chamber of Commerce want changes to give employers equal rights with labor. Also proposed by U. S. Chamber of Commerce is separation of investigation, prosecution and judgment, all now exercised by Labor Board.

Rumor states that White House is critical of Labor Relations Board for failure to alter attitude toward employers following obvious public reaction against Labor Board policies.

More Freight for Railroads

HEAVY upturn in freight traffic, particularly since August, has brightened railroad picture, or at least made troubles less acute. Estimated net railroad income for 1939 is \$95,-

000,000, compared with net deficit of over \$123,000,000 in 1938.

Railroads deserve great credit for handling increased traffic efficiently and with little or no car shortage. For month of October railroads gave employment to 1,055,164 men, largest number since November 1937 and an increase of nearly 80,000 over October a year ago. During year Class 1 railroads purchased 51,000 new freight cars, and are awaiting delivery of over 36,000 more. Also put in service during the year were 94 new steam locomotives and 216 electric and Diesel locomotives.

Efficient handling of equipment resulted in highest average speed of freight trains between terminals on record, as well as greatest average load per train. Interesting also is fuel economy. Back in 1920 it took a pound of fuel to move 5.8 tons a mile. In 1939 the same amount of fuel moved

8.9 tons of freight a mile.

SLANT: Railroads are essential and most taxpayers prefer that they be kept under private management. Needed is a national transportation policy fair to all transportation agencies.

Stubborn Finns

MOST surprising development of Europe's wars is stout-hearted stand of Finns in defense of homeland. Christmas Day brought undeclared Armistice along Siegfried and Maginot Lines, but no cessation in Russian army's attempts to bring Finns to their knees. In North Finland zero weather is biggest Finn ally, with Russian army reported in full retreat, mainly because of shortage of food and other supplies. Russia's retreat in North has been termed a "catastrophe". Finns likewise are holding their own on other fronts, but military experts feel that Russian might will prevail unless Finns get speedy help.

Personally in command of American drive for relief funds for Finns is Herbert Hoover. In one day over \$13,000 was contributed to the fund. American

Good Books to Read

TABLETOP, Eden Phillpotts. A tall romantic story of buried treasure. There's a mysterious island, an ancient parrot, spiders as big as elephants. In this impossible setting, however, are quite possible people, and it's really a first-rate buried treasure story. — *The Macmillan Company, New York.* \$2.00.

Good Movies to See

THE PRIVATE LIVES OF ELIZABETH AND ESSEX. The liking of Good Queen Bess for her young courtier, the Earl of Essex, has always interested historians. The screen story condenses and rearranges the most exciting chapters, setting forth the squally relationship of the aging Queen and the vehement young soldier-earl. The musical score is unusually fine; and it is considered one of the season's best movies.

THIS IS THE LIFE FOR *You!*

YOUR DAY FOR BETTER LIVING HAS COME!

It's only human for you to get a thrilling sense of power when you grip the steering wheel of your new Allis-Chalmers Tractor. Cutting a furrow slice at *twice* the speed of horses, you think to yourself, "Now I'm getting somewhere"—and you are! For once in your life, you have spare time and feed for *paying* livestock . . . maybe the purebred dairy herd you have had your heart set on. At last you can see your way clear to fixing up the place, liming, growing new grasses and legumes for green manure or seed to be harvested with the All-Crop Harvester.

Yes, it's only human for you to strut a little when you see your farm program forge ahead of your neighbors'. But the greatest satisfaction comes when your family joins you in the comforts of Better Living—with Allis-Chalmers power!

MODEL B SYSTEM COSTS LESS THAN HORSES AND HORSE IMPLEMENTS

Full-View Safety Mower is center-mounted, leaving drawbar free for all other haying jobs. Not in blind spot behind you.

Model 40 All-Crop Harvester operates from B power take-off; harvests 100 grains, beans, seeds direct or from windrow.

MODEL WC SYSTEM FULL FLOW 1 ROW POWER AT A PRICE YOU CAN AFFORD

Two-row, power lift cultivator operates with WC up to 5 m.p.h. "Quick-Hitch"—less than 5 minutes, no skinned knuckles.

WC provides plenty of smooth-governed power for "60" All-Crop Harvester, shown here harvesting windrowed grain with pickup attachment.

Norton Heads Producers' Bargaining Agency

AT THE recent meeting of the Metropolitan Cooperative Milk Producers' Bargaining Agency, Inc., Ralph Norton of the Boonville Farms Cooperative was elected president for the coming year. Other officers are: Leon Chapin of N. Bangor (Dairymen's League), Vice-President; A. J. Williams of Franklinville (Sheffield Producers), Secretary; and E. C. Bardin of West Winfield, Treasurer.

The Executive Committee is made up of the above officers, plus J. C. Treat of Honeoye Falls.

The present Board of Directors is as follows: E. C. Bardin; *C. C. Barlow, Leon, N. Y.; L. A. Chapin; F. H. Child, Amsterdam, N. Y.; J. A. Coulter, Watertown, N. Y.; Joe Davis, Little Marsh, Pa.; Dr. R. E. Davis, Clinton, N. Y.; Warren Davy, Greene, N. Y.; G. L. Dumont, Malone, N. Y.; S. A. Hufcut, Middletown, N. Y.; J. R. Humphrey, Holland Patent, N. Y.; *R. P. Kinney, Amenia, N. Y.; Earl Laidlaw, Gouverneur, N. Y.; Ralph C. Norton, Boonville, N. Y.; F. H. Sexauer, Auburn, N. Y.; E. H. Sheldon, Little Falls, N. Y.; H. Stannard, Fair Haven, Vt.; E. C. Strobeck, Macedon, N. Y.; J. C. Treat; H. S. Rolfe, Ogdensburg, N. Y.; and A. J. Williams, (* Newly Elected).

Mr. Norton has been a Director of the Bargaining Agency since it was formed, and served in the past year as Treasurer of the Agency. He has demonstrated his ability to build a strong producer-owned cooperative. The members of the Boonville Cooperative own and operate their country receiving plant which is free from debt. This small cooperative is five years old and is already recognized as one of the most progressive and businesslike cooperatives in the state.

Backs Strong Educational Program

Mr. Norton believes that all well informed producers have the will to do for themselves and he is determined that all shall have the rights that State and Federal laws give to them. A constructive educational program, to enable all to have the facts, is one of the major projects that Mr. Norton places first for 1940.

In commenting on his general thoughts in regard to the program of the Bargaining Agency, Mr. Norton had the following to say:

"Notwithstanding the fact that the surplus control plan, as incorporated in the State and Federal Marketing Orders, is proving its worth and returning to all dairy farmers the best price that they have received in nine years, its continuous success depends upon support given by all producers to meet each emergency as it arises. Only by a thorough understanding of the ever changing problems and the ability to quickly adjust efforts to meet the emergency as it arises can producers hope to retain the benefits that they are now enjoying.

"At present, consideration of the problem of increased production and its effect upon the returns to producers must be a matter of first consideration. A sound program that will warrant the support of all groups will be the aim of the Agency. The Agency's program shall ever be kept in the hands of the producers, as the By-Laws are based upon most democratic lines.

"Regular meetings of the Executive Committee will be held twice each month and meetings of the Board of Directors once a month. Regular meetings of the Delegate Body will be held every three months and special meetings of all bodies will be held whenever emergencies seem to warrant them."

"It will be my purpose," said Mr. Norton, "to keep in close touch with the producers and to protect the interests of all cooperative associations in the Agency and to build stronger producer owned and controlled cooperative associations throughout the entire State, which will be working together for the common good of all. In this purpose, I ask the support of all business men and dairymen."

Following the election of officers and new directors, the Metropolitan Cooperative Milk Producers' Bargain-

ing Agency is all set to serve dairymen during the coming year as it has in the past. As you will note, the smaller cooperatives have a majority on the Board of Directors, and Mr. Norton, the President, is himself a representative of one of the smaller groups.

Important Job Ahead

The next important job ahead of the Bargaining Agency is action designed to prevent a serious slump in returns when the present emergency price schedule expires May 1. Steps are already being taken in this direction. However, there is a broader and more far-reaching job to be accomplished—namely to make dairymen themselves, through the organizations represented in the Bargaining Agency, the number one partner in regulating milk marketing in the metropolitan area and in keeping government supervision secondary. The Marketing Agreements and Orders were put into effect at the request of a majority of dairymen, and if and when any changes are made, they should be at the request of dairymen.

The biggest recent service which the Bargaining Agency has rendered was the lead it took last summer in securing price amendments to the Marketing Order, which it is estimated will add \$10,000,000 to producers' milk checks during winter months. No one knows better than dairymen themselves how much this added income means at this time. It is fitting that two of these bigger checks arrived before the Christmas season. Many dealers took steps to get November checks to dairymen before the holiday, thus making cash available both to pay current bills

By L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

ACTION by the State Grange in endorsing a state tax for advertising and promoting apples is causing considerable interest. The resolution, which was adopted without any dissent from the floor, calls for a tax of one-half cent per bushel on all commercially packed apples.

Funds would be handled by a commission representing the apple interests and nominated by the farm organizations. This plan differs from the milk publicity tax, which is administered by the Bureau of Milk Publicity in the State Department of Agriculture and Markets.

The resolution was introduced in the State Grange by the Niagara County delegation after adoption by the Pomona Grange of that county. It asks that support be given to a bill which is to be introduced in the Legislature this winter providing for a tax of one-half cent per bushel on the commercial apple crop. It further states that the best method of handling the fund would be through a grower commission.

Voluntary Plan Now

Apple promotional work now is being carried on by the New York and New England Apple Institute, whose members contribute one cent a bushel on their commercial pack. Many growers feel that the institute has shown definite results in what can be accomplished by promotional work. A widespread belief among New York growers is that there has been too little support for the institute.

In some counties the complaint is heard that a few growers' support the institute and all growers receive benefit. This happened in the state of Wash-

ington, where the voluntary plan was tried for one year and then a tax plan was substituted. Washington now raises almost a quarter of a million dollars annually to advertise its apples.

State Agricultural Society Meets January 17

The 108th Annual Meeting of the New York State Agricultural Society will be held in the State Office Building at Albany on January 17. Among the speakers who will appear on the program are:

G. Emerson Markham, whose voice many of you have heard via the WGY Farm Paper of the Air and who will talk on "Broadcasting in the Public Interest."

Wheeler McMillan, Editor of Farm Journal, whose subject will be "An American Farm Policy."

Jerome Barnum, Publisher of the Syracuse Post-Standard, who will talk on "Second Thoughts on Important Questions."

Also appearing on the program are: Fred Sexauer, President of the New York State Conference Board of Farm Organizations; H. V. Noyes, Commissioner of Agriculture for the State of New York; Clayton Young of Randolph, President of the New York Chapter of Future Farmers of America.

Wilbur Hesseltine of the State School of Agriculture at Canton will give his talk "Why Not Work Together?" which won him first prize at the speaking contest at New York State Grange recently.

Governor Lehman will be the chief speaker at the evening banquet. Romeyn Berry has promised to let Elmer do the chores so he can talk on "Casting Up Accounts for the Season."

Century Farmer citations have been prepared by Jared Van Wagenen, Jr., and the citations will be presented by the Governor.

is to be the speaker at the boys' banquet, at which Ed. Eastman has been invited to be toastmaster.

The eastern meeting of the society will be at Kingston, Jan. 24 to 26. A featured speaker on this program will be Major C. E. Chase, secretary of the Washington State Apple Advertising Commission. Another visitor will be F. A. Motz, European specialist of the United States Department of Agriculture.

National Meeting Coming

The National Apple Institute will hold its annual meeting in Rochester. While dates are not definite, it is expected that the meeting will be in the first week of February. The meeting will bring to this state representatives of all the various state apple advertising bodies, apple institutes and other groups engaged in advertising and promoting apples. All sessions will be open to growers.

State Fair Contest Winners

Paul Smith, Director of the New York State Fair, tells us that checks for \$12.50 each have been sent to Sheldon Brink of Walton, N. Y., and to Ben Parker of Deposit, N. Y. These two men are winners in the "Suggested New Features" Contest for the State Fair. Both men suggested a wood-chopping contest.

Mr. Smith further states that if any of the many suggestions which came in are used during the time he is director, checks will be sent to those who suggested them.

Horticultural Society Meetings

Next on the program will be the meeting of the New York State Horticultural Society at Rochester Jan. 9 to 12. President J. Roe Stevenson of Cayuga will deliver his annual address on the afternoon of the first day. There will be sessions on insects and diseases, on soft fruits, and many other problems. A major feature of the meeting will be a "Conference on the Economics of Production and Marketing," with four sessions extending over three days.

At these sessions various problems which have a direct bearing on how growers may cut costs or make a profit will be taken up in detail. A number of speakers are being brought from other states, and many New York growers will contribute to the discussions. Halsey B. Knapp, director of the State Institute of Applied Agriculture,

Supply and Demand Prices for Milk

By LELAND SPENCER

IN THE previous article I suggested that the dairymen of the New York milk shed must soon make a choice between two price policies: Either they must accept supply and demand prices, or they must go in for some form of production control. A reader challenges this. He says, "What do you mean by 'supply and demand prices' for milk? I thought we got away from that long ago. And as for production control, it really isn't anything new. The milk supply for city markets has been regulated in different ways for a good many years."

Leland Spencer

It is true that the price of milk isn't determined by supply and demand in the same way as the price of apples, potatoes, eggs or most other farm products. The supply of milk for the New York City market has been regulated by health authorities about 30 years. As dairymen know very well, the sanitary requirements have been made more and more strict. Now it is necessary for the Commissioner of Agriculture and Markets to certify that more milk is needed by the market before the health authorities can grant permits to new dairies.

The supply of milk for fluid use also is regulated by classified prices, pooling, and other devices. The object of classified prices and pooling is to get higher returns for fluid milk than could be obtained if the milk supply were treated as a unit. Under the federal and state marketing orders the effectiveness of these devices has been increased by making them compulsory for the entire market. The marketing orders also provide for market service payments to compensate dealers and cooperatives for diverting surplus milk into manufactured products. That is a very effective means of protecting the fluid milk price from the pressure of excess milk supplies.

But while these arrangements do modify the effect of the milk supply on prices, they have not removed the price of milk entirely from operation of the law of supply and demand. To me, a "supply and demand price" for milk is a price that will keep the milk supply in reasonably close adjustment with the sales of fluid milk and cream, taking into consideration the arbitrary as well as the natural forces on both sides. As long as the milk supply in the short season (November), doesn't fall short and doesn't exceed the Class 1 and Class 2 sales by more than about 15 per cent, I would say that we have had a supply and demand price. In November 1938, 11 per cent of the milk in the New York pool was surplus; and in November 1939, 16 per cent. I doubt whether the dairymen of the New York milk shed will profit in the long run from prices that bring on more than 15 per cent surplus in the month of November, and corresponding proportions in other months based on the normal seasonal changes in the use of milk.

In this connection, the fact that the marketing orders were amended recently to provide for market service payments in November and December, as well as in other months, may be significant. I hope it doesn't mean that the policy of balancing production and consumption closely in that season of the year has been given up.

The people who drafted the Milk Control Law of New York State, and

presumably the Legislature and the Governor also, recognized that in fixing milk prices, even under state authority, one of the main considerations is the balancing of supply and demand. One section of that law provides that in fixing the prices of milk the Commissioner of Agriculture and Markets "shall take into consideration the balance between production and consumption of milk, the cost of production and distribution, . . . the cost of feeding stuffs used in the production of milk, the supply of milk in such market and the purchasing power and welfare of the public."

The Agricultural Marketing Agreements Act of 1937, which is the basis of the federal milk orders, provides that parity of purchasing power, rather than the balance between production and consumption, is to be the main consideration in fixing milk prices. I know, however, that those in charge of administration of federal marketing

NEW YORK MILK PRICES WITH COMPARISONS

orders always give serious attention to the supply and demand situation in determining what are the proper prices for fluid milk and cream in any market.

Under the conditions that have prevailed in the various milk markets since 1931 it has been no easy matter to hold to the supply and demand principle in fixing prices. Most of the time the "supply and demand price" has been too low to satisfy dairymen or to bring them an income sufficient for decent living. Last summer the seriousness of the drought was not recognized soon enough, and for two or three months New York dairymen received considerably less for milk than the supply situation warranted. The greatest difficulty, however, in attempting to keep the milk supply in good adjustment with demand by proper pricing is due to the slow, prolonged and somewhat unpredictable response of milk production to different price situations. I am confident that a much better job of price making for milk could be done, if certain basic conditions were improved. I have in mind particularly the following:

1. The prices for all farm products and basic commodities in general must be brought up closer to the level of retail prices, wages, taxes, etc. When that is done, "supply and demand" prices will be "living" prices for milk.
2. More complete, accurate statistics of milk production and consumption, costs of production, consumer incomes, and the like, should be made available, and these facts should be gotten out more promptly than is now the case.
3. A good deal of research concerning the responses of milk production to

various prices for milk, feed, cattle, etc., as well as to weather, crop yields, and the like, is needed to provide a better basis for forecasting the milk supply.

4. It should be possible to make the price changes which are needed from time to time more promptly and with less concern for political expediency.

5. Dairymen and others need to be better informed concerning the relation of milk prices to the production and consumption of milk.

6. The organization of dairymen in the milk shed should be perfected so that maneuvering for competitive advantage will be eliminated as a factor in determining the price of milk.

Milk Consumption Increasing

Recent report showed milk production in the New York milk shed from 13 to 14 lbs. per day per dairy higher than a year ago. Total milk production for U. S. in November was about equal to the record production established a year ago. For the entire country winter milk production is expected to continue about on last year's level.

The New York State Department of Agriculture and Markets reports that more New York State cows freshened between June and December than in the same months in any year since 1932. As a result spring freshenings are expected to be lighter than in most recent years. That, of course, is one reason for heavier winter production.

The Milk Industry Foundation reports an increase in consumption in New York City of 78 per cent in November as compared to November a year ago. November was the 9th consecutive month in which the daily average sales of milk in New York City were higher than for the corresponding months in 1938.

On December 1 dairy crop reporters stated that they were paying \$1.65 per hundred for dairy ration—a drop from the recent high figure of \$1.70 for October, but considerably higher than the price of \$1.49 on December 1 a year ago. On December 1, 1937, the price reported was \$1.72, and on the same date in 1936, \$2.00.

As compared with quantities of dairy feed on hand a year ago, dairymen reporting to the Department of Agriculture estimated the following supplies: corn silage, 87 per cent; alfalfa hay, 85 per cent; other hay, 73 per cent; oats, 86 per cent; barley, 83 per cent.

Estimates of cold storage holdings of butter on December 9 were 78,820,000 lbs., of which about 63,652,000 lbs. were privately owned, the balance by the government. On the same date a year ago cold storage holdings were 149,000,000 lbs., of which 45,775,000 lbs. were privately owned.

For the month of October some 23,000,000 lbs. of oleomargarine were sold, almost 7,000,000 less than a year ago. For the period of January to October, 1939, figures show about the same percentage as a year ago—namely 23 per cent.

On December 15 Federal Circuit Court of Appeals in Boston gave further backing to the constitutionality of the equalization pool in the Boston market. The Court dismissed appeal of five dealers who had previously been served with injunction to refrain from violating the provisions of the Marketing Order.

Plenty of Certified Seed Potatoes

Potato growers should have no difficulty in securing certified seed potatoes this coming spring. In the Northeast, including Canada, 53,096 acres of certified seed passed final inspection out of 70,111 acres entered at planting time. The approved acreage is 31% higher than a year ago and slightly higher than the approved acreage for 1937. Increases are reported for Maine, New Brunswick, Nova Scotia, and Prince Edward Island; while there were acreage decreases in New Hampshire, Vermont, and New York.

In bushels the available certified seed supply is estimated at 12,201,500 bushels, compared with 9,272,400 bushels a year ago and 13,826,000 for 1937. The Chippewa certified seed supply is over double last year. Other increases by

varieties are: Cobblers, 20%; Green Mountains, 39%; Katahdins, 72%. There is a decrease of 28% in production of Spaulding Rose certified seed.

Egg Production High

Receipts of eggs at the larger markets have been running well ahead of a year ago. Lower egg prices and higher feed prices are squeezing poultrymen. The number of hens per farm flock for the entire country is higher than a year ago and egg production per hen has been well above the five-year average but slightly below the record production of 1938. When the hen census is taken January 1, it is practically certain that more layers will be shown than were on farms a year ago. On the other side of the picture, the purchasing power of consumers is expected to be somewhat higher.

On the average, the price of eggs to U. S. producers the middle of November was 3c less than the same date a year ago.

The feed situation has brought about a change in broiler production. In the Middle-West, where home-grown grain is available, reports indicate an increase of 32 per cent in the fall hatchings of broilers; while in the New England area, where most of the feed is purchased, there was a decrease of 29 per cent in fall hatchings compared to a year ago.

Apple Holdings Moderate

Storage holdings of apples are usually at the peak for the season around December 1. The fact that U. S. holdings this year of 30,748,000 bushels on that date were slightly under last year's figures, as well as five-year-average holdings, is considered an optimistic note in the apple situation.

By areas, holdings in New England and New York were somewhat heavier than a year ago, with holdings in New Jersey and Pennsylvania below a year ago. Virginia's holdings were light last season and again this year, while the situation in West Virginia is approximately the same as a year ago. Western boxed apple regions have fewer apples in storage than a year ago. A decrease of over a million boxes is shown in Washington, half a million in California, and a considerable decrease in Oregon.

Important Notice

We take this opportunity to thank our readers and more than six hundred livestock breeders who have made this page the outstanding market place for livestock in the Northeast.

With this issue you will note that all Northeast Markets for Northeast Producers livestock advertisements have been condensed to one page. This has been done to accommodate more advertisers at farmers' advertising rates.

It is our earnest desire to continue to give the utmost in advertising value to more farm breeders. Beginning with this issue, the space units offered will be one-half inch, single column, or one inch, single column. No larger unit can be sold to any individual advertiser.

The rate for the one-half inch space remains the same as for the previous one inch space. This is \$14.00 when seven issues are published during a three month period or \$12.00 for a six issue, three month period. Similarly a one inch space is \$24.00 for six issues and \$28.00 for seven issues.

If you have livestock to sell and want to use this page, write your name and address below, attach your advertising copy and mail to American Agriculturist Livestock Department, Ithaca, New York.

NEARBY MARKETS for NEARBY POULTRYMEN

The Government Buys Some Eggs

By J. C. HUTTAR

I REALIZE that everyone won't agree with me when I say that the U. S. Government, through the agency of its Federal Surplus Commodities Corporation, has put in some saving licks for the poultrymen of this country. I have made this statement publicly before and have put it into print several times

J. C. Huttar

and now I merely repeat it so that you will know I haven't changed my mind. This is not an opinion or position that I feel anyone needs to defend. I shall, however, offer just one piece of evidence here because I think it's information that will interest you as a thoughtful poultry keeper who lays his plans ahead.

The year in which the Federal Surplus Commodities Corporation (hereinafter referred to as the F.S.C.C. as my lawyer brother would put it) made its biggest purchases was 1937. They purchased something over 500,000 cases. This is over twice as many as they bought in any year before or since.

Now, the folks with whom I've discussed this activity of the Government, and who object to it honestly, mostly bring this argument up. They call it artificial support which, they say, keeps prices at a level which is likely to encourage more poultry keeping, and thus the market price of eggs for the whole next year will be lower. If that were so then 1938 should have been a year of heavy hatching and poor egg prices.

Was it?

A Guess for 1940

I believe the second biggest purchase year is the one just ending. Again this would lead one to guess (on the basis of the argument I gave above) that we'll have an unusually large hatch in 1940, and poor egg prices all next year. Well, I'm going to take a chance in saying that I don't think this will come to pass next year. Now let me tell you why.

It's my idea that farmers go into chickens heavier or lighter because the preceding year was good or bad. Maybe that isn't clear so I'll be definite.

Last year (1938) was a good one for the man with hens, so they told me. And, although I'm not a dairyman, I believe it was a poor year for the cow man at least during the summer. I've also been told that it was not so good

for the bean man and the cabbage grower, fruit didn't yield so good and pigs were cheap. So a few cows were sold and fewer heifers raised (you check me, because I have no definite proof right at hand), fewer acres of cabbage and beans were planted, nothing much could be done about most fruits but fewer pigs were raised this year (1939). And a lot of these folks, who cut here and there bought a few extra chicks. Add all of these together and you had a whale of a hatch for the whole country.

Or, as the arithmetic teacher used to say to us in the Little Red Schoolhouse,—A good egg year plus a poor year in other lines of farming equals a big chick hatch the next year.

Now, it looks to me as if milk is doing better and so are potatoes and a few other crops, especially the grains. Eggs, on the other hand are not a very profitable proposition this year. So I think we'll have a smaller hatch.

I don't believe that the thing is so sure that you should go into it heavy. But it does look like a hatch like 1939 or a little larger will cause no distress regardless of how many eggs the government buys.

How and Why

Now that the federal government is again supporting egg prices, maybe you'd like to know how and why.

Back about 1933 Congress passed a bill which turned over to the Secretary of Agriculture 30% of the money taken in on import duties. And it told him that he could use this money to buy farm products for distribution to folks on Relief Rolls, in order to remove from the market burdensome surpluses which were hurting prices paid to farmers to a point where their purchasing power was cut down below 75% of the pre-war level (1910-1914).

The F.S.C.C. was set-up by the Secretary of Agriculture to do this job.

The Poultry Section of the A.A.A., with Dewey Termohlen as its chief, keeps figures which measure the level of this purchasing power. When these figures show that purchasing power has dropped below the 75%, Dewey's division advises the F.S.C.C. what price and what grades of eggs have to be bought to bring it back to that level. Dewey also informs them whether or not producers and producers' organizations are asking for government support of egg prices.

Take for instance this month. As early as November 30th the price of fresh eggs was already so low that the egg producers' purchasing power from the sale of eggs had dropped below 75% of the pre-war level. This situation was brought about not only by low egg prices but by higher feed prices as well. But it wasn't until December 9th that any great number of producers and their cooperative organizations had asked the government to stop the price of eggs from going any lower. I sat in on one of these meetings between producers and several government men and myself.

The Government Acts

On December 12th the F.S.C.C. started buying eggs in New York and a day or two later in Chicago too. The grades of eggs purchased to this date have been Mid-western mixed color Standards, Firsts and Mediums, Pacific Coast White Mediums and Nearby and Mid-western white mediums.

On the day before the F.S.C.C. started buying these various grades the

A. P. Warren Wins Purina Chick Contest

From left to right: C. S. Johnson, Manager of the Poultry Department of Purina Mills; A. P. Warren, Tarrant, Alabama, winner of the Chick Growing Contest; and William H. Danforth, Chairman of the Board and founder of Purina Mills.

A CHECK for \$1,000 went to A. P. Warren of Tarrant, Alabama, as first prize winner in the Purina \$7,000 Chick Growing Contest. The presentation was made by William H. Danforth before a group of 400 southeastern farmers. Mr. C. S. Johnson of Purina conducted the contest.

The prize was awarded on the basis of the number of chicks which lived and their total weight in relation to numbers. Chicks were grown for eight weeks on Purina Startena and Growna.

Second prize went to Benjamin Sheets of Fleetwood, Pa. Other cash prizes went to six national winners, to the winner in each state, and to the next ten high in each state.

It is none too early to begin thinking about next spring's baby chick order. The first step is to have a clear picture of the kind of chicks you want. If, for example, you want chicks that are free of pullorum disease, deal with a hatchery that has tested breeding stock until no reactors are found. Some hatcheries have had no reactors for a number of years, and naturally their chicks sell at a premium. The next step is to read ad-

vertisements in *American Agriculturist*. You will find several that will appeal to you. Then correspond with the hatcheries and get all available information to be certain that you are buying what you want. The third step is to order early and specify the date on which you want the chicks. Buying chicks is the kind of a job you should not leave until the last minute.

The O. A. NORLUND CO., Williamsport, Pa., has an ingenious ice creeper which is riveted to the heel of an over-

shoe and is folded under the instep when indoors or on dry pavements.

Several styles are offered for different types of heels.

Symbolic of the widespread use of rubber on the farm, members of the FIRE-STONE organization portrayed a complete farmyard group at Akron's annual Rubber Ball and won first prize for group costumes. All the barnyard denizens from the chicks to Ferdinand, the bull, were represented as were the farmer and the farmer's wife, attired in colorful and novel costumes all made of controlastic rubber fabric. Mr. J. W. Thomas, Firestone president, (left foreground) wore a Mardi Gras suit of formal cut while Mr. Russell A. Firestone, department manager, headed the farmers' contingent which included executives and their wives, all attired in brilliant-hued overalls and "gingham" dresses.

Government Buys Eggs

(Continued from Page 17)

top quoted prices on them in New York were:—Mixed color Standards 21¼c, Firsts 19¼c, and Mediums 16c; Nearby white Mediums 18¼c and Pacific Coast white Mediums 18c.

To-day (December 21, 1939) the prices are the following:—Mixed Color Standards 22¼c, up 1c a dozen; Firsts 20c, up ¼c; Mediums 16¼c, up ¼c; Nearby White Mediums 20c, up 1¼c and Pacific Coast Mediums 20c, up 2c.

In the last ten days the F.S.C.C. has bought only 4741 cases. This is only a very small part of the total supplies of fresh eggs.

Finger Lakes Poultrymen Organize Cooperative

Cayuga County, N. Y., poultrymen recently organized the Finger Lakes Egg Producers' Cooperative Association, with headquarters in Locke. Membership will be solicited from 12 counties in the Finger Lakes region. Eggs will be assembled, graded, packed and shipped under the trade name "Finger Lakes Cooperative Eggs." Officers include: Paul Kennedy of Scipio, President; Eber Salley of Scipio Center, Secretary-Treasurer; and Donald Wright of Moravia, Vice-President.

Floyd Lick of Locke has been hired by the Association to act as their agent. Mr. Lick will solicit new members, visit producers, settle disputes, and perform general services with the field agents. The membership fee is \$3.00.

The Association has copyrighted its brand and label, and the use of the label is restricted to members of the Association who pack their eggs according to quality standards that have been set up. Four New York City firms have been selected as receivers, and they will make returns directly to the producers, with the exception of 15c a case which is deducted by the receiver and sent to the Association to cover its expenses. The Association and the receiver each contribute 1c per case to an advertising fund which will be used to advertise this brand of eggs on the market.

Grange Gleanings

(Continued from Page 6)

member of Tuftonboro Grange, received his Golden Sheaf certificate. During the 50 years that Mr. Hersey has been a member of that subordinate Grange the latter has held 1200 Grange meetings and Mr. Hersey has been present at all but six of them. He has served his Grange most of that time as an officer and is at present the gate keeper.

A GRANGE VETERAN in Maine retires from active leadership in the decision of William B. Deering of Hollis not to continue longer as a member of the executive committee, in which position he had served for 12 years, a considerable part of that time as chairman. Mr. Deering is one of the substantial Patrons of the Pine Tree State and is a member of the State Highway Commission.

FIRE of undetermined origin swept the interior of the home of Fallkill Grange, Dutchess County, N. Y., on Sunday morning, December 24. Firemen from Staatsburg and Hyde Park subdued the blaze after a stubborn, smoky fight. But for the arrival of the Hyde Park pumper the structure would have been totally destroyed. Damage is estimated at \$2,500—a most saddening Christmas for the members of Fallkill.

LATEST FIGURES from the Educational Aid Fund of the Massachusetts State Grange show its present total to be \$124,152.08, a considerable increase during the past 12 months. In the 28 years that this beneficent Grange project has been in existence 2028 loans

have been made to young people to aid them in getting an education beyond the public schools, and the total amount of these loans is recorded as \$256,919. Since this Massachusetts loan fund was started 15 other State Granges have adopted a similar plan, and noteworthy among these is New York State, where the fund has already reached large proportions and is rapidly growing.

* * *

MRS. CORA D. TUCKER of Shelton, Connecticut, who has efficiently served as head of the Home Economics Department of the National Grange during the past year, has been reappointed by National Master Louis J. Taber for the year 1940.

* * *

AN IMPORTANT STEP taken by Massachusetts State Grange at its recent annual session in Pittsfield was the vote, 293 to 40, to change its meeting date from the second Tuesday in December to the fourth Tuesday in October, beginning with the session of 1941. A similar attempt in Rhode Island to change from December to November was rejected.

* * *

KENT GRANGE in western Connecticut is gaining quite a reputation for itself in the catering business, making a specialty of serving appetizing hot suppers in connection with the big husking bees which are an autumn feature in the town of Kent. Two of these were recently held, at both of which Kent Grange did itself proud in the supper line: The first was for 500 New Yorkers who came up on a railroad excursion, and the second was for 300 members of the general office athletic club of the New Haven Railroad Company itself. The fame of the Kent Grange suppers has traveled far and the members of that subordinate seem to know exactly what sort of a menu to provide in connection with such a spirited event as a husking bee.

* * *

WORTHY MASTER LOUIS J. TABER of the National Grange has appointed a special recess committee to make a thorough investigation of "cost of production as applied to agriculture", with a report to be presented at the next session of the national organization. One of these members will be State Master W. J. Neal of New Hampshire.

* * *

STATE MASTER David H. Agans of New Jersey is much in demand these days as a speaker at large Grange gatherings. He gave the principal address recently at the annual session of the Vermont State Grange at St. Albans, and is scheduled as the "top line" speaker for the Connecticut State Grange at Hartford, Wednesday evening, January 10.

(signed) F. E. P.

Feb. 15, 1939.

Here is my order for HALLCROSS Baby Pullets for the 6th season—ever since you advertised them in 1934 they have averaged 203.4 eggs per bird per year. Every chick I have bought has been raised to a laying pullet, except a few eaten on my table. They have paid me a larger profit than any birds I ever had in 50 years of poultry.

(signed) F. E. P.

Only one man's experience—but he brings out in a few words the key to our success. Few, low, or no losses, heavy production—better profits. It is largely because of these things

LIVABILITY • PRODUCTION • PROFITABLENESS

that more and more poultrymen each year are coming to HALL'S Chicks for more satisfactory profits. Mr. F. E. P. (name on request) is only one man out of thousands who could testify to the same qualities. Are those the kind of chicks that you would like? Send for our catalogue today.

We like to plan our hatches ahead. If you will cooperate with us by booking your order early, we will cooperate with you, by allowing you a

5% DISCOUNT For Early Orders

Let's cooperate this season, for your greater profits. New catalogue, price list and discount terms free on request.

Quality chicks since 1911. "Never a week without a hatch" since 1927. Pullorum free by State test since 1927. Each year we sell more chicks than ever before. Over 9 million last year. We ship prepaid and guarantee 100% live delivery. Catalogue and Price List free.

Calling All Quilt Makers

by
MRS. GRACE WATKINS LUCKETT

HERE IS A collection of quilt patterns to satisfy the heart of even the most fastidious, as well as those who want only a simple pattern. No

Pine Tree.

matter how simple or elaborate the pattern, a lovely quilt may result if beautiful colors are selected and care is exercised in cutting and putting them

together; for a quilt may be both beautiful and useful, as all know who are fortunate enough to have inherited some choice old ones from grandmothers and great-grandmothers.

Those who like appliqued quilts will have a wide choice from these: Fleur de Lis, No. M-706, a graceful, one-piece pattern, which repeats into an elaborate allover effect; Rose Tree, No. M-709, formal yet graceful for 18 inch blocks, and really charming in old prints or plain tints; Grape Border, No. M-710, a quaint old quilt pattern which is appliqued onto a scalloped or plain band and combines well with any antique quilt; Rose of Sharon, No. M-707, a very simple but popular pattern suitable for a block about 18 inches square; Rising Sun, No. M-708, a glorious applique which "shines" well if interpreted in three colors, orange, gold and yellow on white.

Pine Tree is a peculiarly American design, as popular today for pieced

quilts as it was among the Colonials. It makes a quilt top about 86 inches square composed of 16 pieced blocks set diagonally with large plain squares, which may be quilted with the feather circle or with a straight diagonal design.

Double Wedding Ring, No. M-304, is another old favorite. The cutting pattern alone, or the cut pieces, is available. The Wedding Ring Special includes it and the stamping pattern also.

Rainbow Around the World, No. M-422, is a most popular patchwork design consisting of over 2,000 squares to make a top 85 x 99 inches, including border. One ready cut assortment of squares, No. M-422-M, is of blending pastels—peach, orchid and green tones—four tiny prints with eight bright hues; the other ready cut assortment, No. M-477-M, emphasizes rose and green tones.

Fan Star, No. M-260, is perfectly irresistible, and makes up to size 84 x 96. The ready cut pieces radiate out from the center star of burnt orange through orange, gold, deep and clear yellow to pale primrose. From a pattern you could develop your own color scheme.

If you do not see here exactly the quilt pattern which you wish, no doubt you will find it in one of the following 16-page quilt books, 7½ x 10 inches in size, with 12 or 13 exact cutting patterns in each (full instructions and yardage estimates are given with each one):

Book No. M-631B: Bear's Paw, Crazy Ann, Weathervane, Rose Applique, The V Block, Pine Tree, Drunkard's Path, Swastika, Pieced Star, Lafayette Orange Peel, Old Maid's Puzzle, French Star, Album.

Double Duty Patterns

HERE are some extremely attractive models adaptable to many fabrics:

PATTERN NO. 3111 does double duty for either daytime or evening wear, depending on length of skirt, material and trimmings used. For daytime, give it a military touch by the two rows of buttons marching down the bodice; for evening make the blouse of lace or sparkling beaded cloth, the skirt of tulle or net. Sizes are 10 to 20 years. Size 16 requires 3 1/4 yards of 54-inch material for street length dress; 3 yards 50-inch for skirt, 1 1/8 yards 39-inch contrasting for blouse, for evening version.

SUSPENDER OUTFIT NO. 2989

"Talk — Talk — Talk — They're driving me nutty!"

Winter Night

By EMILY ESTEY.

There is something of a Sabbath
In a silent winter night.
The stars are tiny tapers,
And the snow a spread of white.

The evergreens are blackrobed priests
Who breathe a toneless chant;
Bare birch limbs, leaded windows
Through which the moon beams slant.

And o'er and through the stillness,
With the freshening of the breeze,
Comes a peal of organ music —
As the wind plays in the trees.

is a delightful style for little girls and their brothers. Sizes 2 to 8 years. Size 4 requires 1 yard of 39-inch material for girl's long-sleeved blouse, 7/8 yard 54-inch for girl's jumper.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Today in Aunt Janet's Garden

My Window Garden

BEYOND forcing the usual bowls of paper white narcissus, my indoor bulb activities have been few. The calla lily got off to a good start in November, having been potted in rich black soil during October. Now I have to bear in mind that it is a glutton for water and food so it must be fed frequently with bonemeal or a well-balanced fertilizer thoroughly watered in. One of my amaryllis bulbs was potted at the same time as the calla. It did not show signs of life until around the first of the year. It too needs a small amount of fertilizer every two or three weeks. If it keeps up its former reputation, it ought to be blooming in March. I potted it in new soil, but some authorities say that a well established bulb may be carried over by removing the upper two inches of soil and replacing with rich, potting soil.

I usually manage to get a few blossoms on the Christmas or crab cactus. I suppose I move it around more than it likes. I have been told that it should not be moved even two feet from its accustomed place. One of my plants which seems to be not quite so particular is the sultana or Impatiens plant. It bears its attractive spurred blossoms of salmon rose almost continuously throughout the winter. When the plant gets leggy and ugly, I cut it back to a mere stump or root new cuttings in water and transplant into new pots.

My cacti do not object to the dry atmosphere of the living room. The only thing they seem to mind is too much water. Yet their roots should never be actually dry. My old standby, the everblooming begonia seems to take quite a bit of abuse, yet it responds to the right treatment very satisfactorily, that is, just enough water and not too much direct sunlight on its leaves because of burning. But the light must be strong enough to keep it flowering. The large leaved foliage begonias spot badly if water touches their leaves.

On cold nights I either set the plants back from the window or put several thicknesses of newspaper between them and the window pane. One of my most satisfactory trailing pot plants is Campanula Isophylla, exactly like some of my hardy rock garden plants except that their blossoms are blue and the pot plant's are white. It starts blooming in late summer and continues practically the rest of the year. This is an old favorite but unfortunately is not listed in many catalogs.

Say you saw it in AMERICAN AGRICULTURIST

A BREACH of Hospitality

IT WAS something that we ought to have been ashamed of, I suppose. There were indeed certain extenuating circumstances, but — well, when all is said, it wasn't a nice thing to do. So much as that I wish to acknowledge at the start.

It was the second year after we young folks had gone home to live, the winter the old squire was engaged in making and marketing red oak shooks to send to Cuba for molasses hogsheads. He himself had four or five men riving and forming the shooks, and he was also buying shooks that others were making. In February he went to Portland for ten days to oversee the shipments by schooner to Matanzas. Grandmother Ruth went with him for a little rest from household labors; and they took Halstead.

The winter school had closed the week before; we had made fine plans, which included three evening gatherings to which the neighboring young folks were to be invited, a sleigh ride to an adjoining town and a snowshoe trip up to old Hughy Glinds' camp in the great woods. The "grandfolks" had set off at six in the morning. No sooner were they off than we began preparations for a festive evening.

At ten o'clock Ellen sallied forth to invite in our young friends, but at the door to the piazza she turned hastily back with a concerned look. "There's somebody coming up the lane," she said. "It's an ox team and the queerest sled you ever saw! O dear! What can it be?" The prospect of visitors just then was most unwelcome.

It was indeed a singular turnout. A yoke of sluggish old oxen were plodding slowly up the lane between the snowdrifts, drawing a wood sled and on it a little, low windowless hut from the flat roof of which projected a smoking stovepipe. In the open front end of the hut, with a goad in his hand, sat an old man with a bushy gray beard; and as the oxen plodded nearer we caught sight of an old woman's face in a green quilted hood peeping out from the hut.

The strange outfit came creaking alongside the door, and the old man shouted, "Whoa-hish!" to the oxen and then stared at us for some moments through his horn-rimmed spectacles. The old woman put out her head and stared also. A large black and white dog that had been following the sled now came forward and sat down on the snow. "Be Joseph and Ruth ter home?" the old man asked at last.

Addison made haste to say that our grandparents were at Portland.

"When be they acomin' back?" asked the old woman.

"Not for a week or more," Addison replied.

The old man sat and chewed steadily; then he looked at the old woman. "What say, marm, had we better stay, or drive on to Cousin Calista's in Waterford?"

"Wal, sir, I should say as how we'd better stop a spell now we've come so fur to see 'em," the old woman replied in a determined tone. Whereupon she clambered slowly out of the sled hut and, reaching back inside, drew forward a good-sized box with leather hinges and holes bored in the lid. Advancing to the side of the piazza, she set the box down and threw back the lid, and out stepped a big yellow and white cat. The old woman put the box back into the sled hut and then mounted the piazza steps.

Perceiving that her purpose was to enter the house, Theodora and Ellen backed indoors, and Addison and I followed the team to the barn, in the direction of which the old man was now

By C. A. STEPHENS

driving it. We opened the great doors, and he drove in.

"Wal, now," he said, "I want you boys to unyoke them oxen o' mine and tie 'em up in the barn and give 'em a good fodderin' o' hay, and bimeby arter they've hed water if ye've got some corn meal fer 'em, it won't hurt 'em a mite."

"All right, sir," Addison replied. Some minutes later as Addison and I were going into the kitchen, we met Theodora and Ellen coming out to find us. Their faces suggested distress and consternation. "O dear! I do believe it is old Elnathan Holeb and his wife!" were Theodora's first words.

We had once or twice heard of the Holebs, an old-fashioned couple and some distant connection of our folks, who usually spent the winter visiting their relatives. They lived up Skowhegan way, where they had a little farm which they tilled in summer; but as the weather grew cold and snow came, they were wont to shut up their house, take their dog and cat, and start out with the sled hut on a grand tour of visiting all their relatives from brother and sister down to the remotest sixteenth cousin — visit them and remain anywhere from three days to three weeks at a place. "We git through the winters, and it don't cost us a cent except fer tobarker," old Elnathan used to boast.

The last time they had visited at the old squire's, the winter before we young folks went home to live, they had stayed twelve days — a circumstance that pretty nearly touched the limit of Grandmother Ruth's forbearance; for they were far from being an interesting pair, and, what was worse, they both smoked atrocious old pipes and filled the house morning, noon and evening with the rankest of tobacco smoke. That habit alone nearly drove grandmother wild at times!

Ellen was nearly in tears. "Our good

time will be spoiled," she lamented. "They'll stay and stay, and we cannot go anywhere or invite anyone here with them around!"

We went into the kitchen. Thus far no fire had been kindled in the sitting room. Our visitors had made themselves comfortable at the kitchen stove, the old man on one side of it and his wife on the other. They had lighted their pipes, and the room was already smoky. The big yellow tomcat sat composedly between them, and near the outer door lay the dog.

The girls made shift to approach the stove and prepare the midday meal as best they could. When it was on the table and Theodora had announced it, our visitors put up their pipes, and, taking their places without a word, began to eat heartily. The large tomcat came and rubbed himself against our legs, and the great dog drew near and looked up with much interest.

"Ezra likes milk," the old woman at last said and stroked the cat's head.

Ellen took the hint and, going to the tin closet, fetched a basin and fed him. "Bill likes meat," old Elnathan remarked.

Whereupon Addison called the dog to the woodhouse and gave him some cold pork. Otherwise the meal passed without incident or conversation.

It was my turn that day to pump water for the stock at the barn, a somewhat lengthy and toilsome task. I was occupied with it for an hour or so. Meanwhile, as appeared afterwards, Addison and the girls took counsel together out in the woodhouse again and decided on a desperate expedient to get rid of the old couple.

When we gathered for our evening meal that night, I was not a little astonished at the poverty-stricken aspect of the supper table. Everything in the way of food on it consisted of an unsightly tin pan containing very small boiled potatoes in their skins and a platterful of badly scorched corn cake. Of butter there was no sign, though there was a saltcellar near the potatoes. I suppose I stared in amazement, for the table at the old squire's had always been abundantly served; but Addison pressed my foot with his, and then I understood.

Our visitors took their places and viewed the repast with evident disapproval. Ellen passed the corn cake

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

A Flag to Fly

Odd, how easy it is
To laugh and sing,
Gayhearted, so that friends
Say now, "How happy she is;
"How glad we are."

How easy it is
To thrill anew at the beauty of things—
A sun-touched bit of colored glass,
The baking of a favorite dish,
A tinted cloud against the sky;
Yet inwardly to feel the life-blood
Drip away drop by drop
From an old, unhealed wound.

Odd, how easy
A flag to fly.

—Mrs. Franklin Preston,
Treadwell, N. Y.

and then the potatoes. We four young folks made a great show of eating, and the meal proceeded in silence.

"Didn't your folks raise good crops this year?" old Elnathan finally asked.

"Our crops were not what they sometimes have been," replied Addison and passed the little potatoes.

"Aunt Salome" sniffed and tossed her head. To the best of my recollection not another word was said at table or until Theodora showed our visitors to their sleeping room. When they retired, we consulted in the kitchen.

"How long do you think they will stand it?" Ellen asked anxiously.

"I'm afraid they will stand it longer than we can," Addison said, laughing.

"But can't we have something to eat now they've gone to bed?" I asked callously.

"Oh, but that would be too bad!" Theodora said. "We ought to play the game fair with them." And Addison, still laughing, seemed to think so too.

Next morning the girls prepared in a frying pan what was left of the potatoes and warmed over the scorched corn cake. They also made coffee, but it was so weak that you might have seen the bottom of a big pitcher full of it. There were dour looks at table, but neither of our guests said much.

For our noontide meal the girls boiled the backbone and tail of a salted codfish and made more burnt corn cake. When we sat down to it, Aunt Salome suddenly pushed back her chair and marched with a determined air to the pantry to investigate for herself; but we had provided against that danger the night before by carrying everything edible to a cupboard upstairs.

That evening there was another panful of little boiled potatoes with salt and more shockingly scorched corn cake. Addison and I partook ravenously, or pretended to. I should have been famished except for the apples that I got between meals from the cellar. The girls, I noticed, looked wan but firm. Aunt Salome did not scruple to free her mind to them. "I used ter think that Joseph and Ruth sot a good table!" she exclaimed. "But that time 'pears to be gone by. Hain't yer grandmarm never teached ye to cook?"

"We cannot cook very well yet," replied Ellen darkly.

"Hez Joseph ben a-meetin' with revarses lately?" old Elnathan asked.

"Well, of course he has ill fortune at times," Addison replied soberly. "He has a large family now, you know,

The Song of the Lazy Farmer

cast 'em off I'll miss 'em so, that I'd be feelin' mighty low and lonesome like, them faults, by gee, have just become a part of me. If I cast them aside, why then, I'd have to git some more, and when it was all done, them new sins might be just as bad; on New Year's night I'll sit and watch the New Year in, and then the next day I'll begin to do just what I've always done, while neighbor frets and has no fun. He'll worry for a month or two, and then he will begin to do them things he swore off from, while I will live on peaceful, surely nigh a month or two of worryin' ain't no way to git rid of sin.

EACH year, on January one, my neighbor has a lot of fun, a-listin' out all of his sins, so that when the new year begins, he plans to leave them sins behind, he hopes that New Year's Day will find him all freshed up, without no faults; and so he gits to work and salts away his sins, and starts anew in hopes that ere the year is thru his character will blossom out, until he'll be known as about the best man in this neighborhood, for he'll behave the way he should. So he sits up all hours at night, the list he's made is quite a sight, of things that he won't do no more, like trackin' up the kitchen floor and usin' swear words on his mule, he'll keep himself quite calm and cool; no matter what may rile him up he won't turn round and kick the pup.

I s'pose I've got faults of my own, I've had 'em all since I was grown, and I'm familiar with each sin, they're like old friends, if I begin to

Yellow Lilies

By IRENE McDERMOTT.

I planted yellow lily bulbs
In a treasured azure bowl,
With secret hope that they would be
Nectar for my thirsty soul.

I placed them on the window sill
In a softly sunlit room,
And waited, watching patiently,
While they slowly burst in bloom.

But then my soul would not respond
To the fragrant, dewy treat,
Until I took it, bowl and all,
To a shut-in down the street.

and we all feel the need of being economical."

"Yas, I see ye do," the old man rejoined.

Before we were up from the table, we heard a noise in the pantry, and the girls espied Ezra on the top shelf, devouring what was left of the codfish's tail. In consequence we did not have it for breakfast as had been planned, but the girls boiled more little potatoes and baked a sheetful of "biscuits" fairly yellow with soda and so salty you might have used them to catch colts with. We also had "coffee."

In the midst of a painful effort to masticate one of the biscuits Uncle Elnathan suddenly stopped short and jumped up from the table. He could stand no more. "Marm," he cried, "I guess you and me better be agoin' over to Cousin Calista's."

"That's what I think, Elnathan, and the sooner the better," she said grimly. "Sech victuals I never saw. 'Tain't fit for a dog to eat! I never was so dis'p'nted in any place in all my born days!" she flung back as she left the table to get her wraps.

I am afraid that none of us even for courtesy's sake urged them to remain. Addison and I rushed to the barn to yoke the oxen before they changed their minds.

They set off without bidding us goodbye, nor did we say, "Come again." There was gleeful capering and dancing all about the house as soon as they were safely down the lane. Then we flung open windows and doors to free the house of that awful tobacco smoke.

The foodstuff from the cupboard upstairs we hurriedly brought back to the pantry. Cereal was soon cooking, and eggs were boiling. Cream, butter and cheese found their way back to the table. Bread, cookies, pies and preserves reappeared from their hiding places. It seemed to me that I had been starving.

The old squire and Grandmother Ruth returned during the evening of the tenth day. We had expected them that night. The girls had supper ready, and we all sat down together again.

But on passing through the sitting room, grandmother had smelled something suspicious. "Who's been smok-

ing in my sitting room?" she asked.

Now to be frank, we had conspired for good reasons not to speak of the Holebs' visit at all, but grandmother's question took us back. The girls and I looked at Addison for aid, and he rose to the emergency. "Why, when you first went away," he said casually, "an old couple who said their name was Holeb was here awhile, and they smoked a good deal."

Grandmother Ruth glanced quickly and oddly at the old squire. "Why, Joseph," she exclaimed, "that must have been Elnathan and Salome!"

"Yes, I guess it was," Addison said still casually.

"How long did they stay?" grandmother asked.

"Well, now, let me see," Addison replied as if pondering. "They were here two days and two nights."

"That all!" exclaimed grandmother in astonishment. "I hope you were not impolite to them," she added.

"Oh, no," Addison replied. "Not in the least."

"But how come they left so soon?"

"Well, I didn't ask them," Addison replied carelessly. "Perhaps they were disappointed because you and grandfather were not at home. Possibly we didn't set quite so high a table as they were accustomed to."

"I don't see why they needed to complain," said Grandmother Ruth, resenting the implied slight to the family table. As if the subject were not worth pursuing, Addison began asking Halstead about Portland.

Grandmother said no more, though she was plainly puzzled. The old squire made no comment. His air was one of quiet thankfulness, as if for having escaped a calamity.

As many as seven years elapsed before either of the old people learned the explanation of the mystery. By that time all of us except one had left home and had gone our several ways in life. But as often as we could we came back to the old farm at Thanksgiving; and on a certain Thanksgiving Day when we had all come back except Halstead, and were sitting around the table after dinner, we fell to talking over old times at the farm—the good times, the misadventures and some of the roguish pranks that we had been guilty of. Theodora glanced thoughtfully at the old folks; memory was very busy with her. "How about the Holebs, grandmother?" she asked at last. "Are they still alive and visiting as usual?"

"Oh, yes," grandmother replied. "I hear of them now and then, but for some reason they gave up coming here after that short visit they made while we were away at Portland."

Theodora glanced across at Addison. "Shall I?" she whispered.

Addison laughed and nodded. Whereupon Theodora began and with numerous promptings from the rest of us made a clean breast of that sad breach of hospitality on our part seven years before. I was afraid that the old folks would feel hurt, but they listened calmly and with scarcely a word of comment. Possibly they had suspected something of the sort all along.

"I have always felt a little ashamed of that," Theodora continued. "And now that we are all at home here and think of it, what do you say to our making up a barrel or a box of good things to eat and sending it to those Holebs—just to ease my conscience a little?" she added, laughing.

"Well, I hardly think I should," Grandmother Ruth said at last, placidly. "It will be quite as well to let bygones be bygones."

"Don't you think it would be well received?" Theodora asked.

"Oh, I dare say," grandmother replied. "No doubt they would like it. They might feel so grateful that they would come down here to thank us—and stay three weeks!"

"No EXPERIMENTS for Me When My Child CATCHES COLD!"

NOTICE TO MOTHERS . . . Today 3 out of 5 mothers—knowing how foolish it is to experiment with untried medications or constantly dose delicate stomachs—use this home-approved external poultice-vapor treatment to relieve distress of colds.

WHEN a cold makes your child feel miserable, all stuffed up—causes muscular soreness or tightness, irritation in the upper bronchial tubes or spasms of coughing—let the experience of other mothers help you to relieve the distress.

Here's what you do: At bedtime, rub the child's throat, chest and back with Vicks VapoRub. And see what morning brings!

Acts 2 Ways at Once . . . Almost immediately VapoRub starts stimulating like a good old-fashioned poultice. And, at the same time, pleasing—helpful—medicinal vapors are released by body heat and breathed direct into the cold-irritated air passages.

Then for hours this poultice-vapor action continues. It invites refreshing sleep. And when you see how it relieves distress you will understand why Vicks VapoRub is a family standby in 3 out of 5 homes. WHY TAKE NEEDLESS CHANCES!

IDEAL FOR CHILDREN . . . JUST AS GOOD FOR ADULTS

GOING TO FLORIDA?

Here's What You Want To
Know About Florida

HOW TO HAVE MORE FUN. Collier knows more about Florida than almost anyone. That's why you find Collier Hotels at the smartest resorts...with magnificent beaches, wonderful sporting facilities and everything you want for a perfect vacation.

HOW TO GET MORE FOR YOUR MONEY. Smart people who know Florida stay at Collier Hotels. Why? Because Collier saves money by operating TWELVE fashionable hotels under ONE management. This saving is passed on to you in the form of lower rates.

HOTEL MANATEE RIVER, Bradenton
HOTEL CHARLOTTE HARBOR, Punta Gorda
HOTEL SARASOTA TERRACE, Sarasota
HOTEL TAMPA TERRACE, Tampa
HOTEL FLORIDAN, Tampa

To Relieve Bad Cough, Mix This Recipe, at Home

Big Saving. No Cooking. So Easy.

You'll be surprised how quickly and easily you can relieve coughs due to colds, when you try this splendid recipe. It gives you about four times as much cough medicine for your money, and you'll find it truly wonderful, for real relief.

Make a syrup by stirring 2 cups of granulated sugar and one cup of water a few moments, until dissolved. No cooking needed—it's no trouble at all. Then put 2½ ounces of Pinex (obtained from any druggist) into a pint bottle. Add your syrup and you have a full pint of medicine that will amaze you by its quick action. It never spoils, lasts a family a long time, and tastes fine—children love it.

This simple mixture takes right hold of a cough. For real results, you've never seen anything better. It loosens the phlegm, soothes the irritated membranes, and quickly eases soreness and difficult breathing.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action in coughs and bronchial irritations. Money refunded if it doesn't please you in every way.

Managing Director

KIRKEBY HOTELS

To Sunshine Land with A. A. FOLKS

SEVEN MORE weeks to February 24, when our special train will head Westward carrying another happy company of *American Agriculturist* folks to a world filled with thrills, gorgeous scenery, strange and interesting sights, flowers, spring and summer warmth, pleasant companionship, delicious meals—in fact everything that goes to make a perfect vacation. Best of all, there will be some one from *American Agriculturist* on hand to shoulder all details of traveling, leaving those who come with us on the tour absolutely free to enjoy themselves.

If you have never been on an *American Agriculturist* tour, you may think we exaggerate when we say that our trips are something to write home about! So we are going to quote here a few paragraphs from a story about our last winter's tour, written by a man who went on it—Charlie Skeele, of Dalton, Pa. Mr. Skeele said he wrote his account of the trip so that he could always remember things seen and done on it, just as they happened at the time. He entitled his story, "A Journey Worth Taking," and begins it this way:

"Did you ever pick up a magazine, read an advertisement about a trip or a cruise, and have the picture painted so vividly and so elaborately that you wondered if it all could be true?"

"For a number of years I read about the trips that *American Agriculturist* offered its readers, but never had an opportunity to talk with any one who had made one of those journeys. Some advertisements so exaggerate what they have to sell that I had always wondered if it were not true of these A. A. trips. But I want to say that the trip not only fulfilled every promise that was made in the advertising, but gave us a great deal more for the money spent."

We are sorry that we do not have room to print the rest of Mr. Skeele's story of his trip, for it is an extremely interesting and well-written account of his personal impressions, and of the pleasure he gained from each day's new experiences.

Perhaps not everyone who goes on our trips can write so vividly of what they see, as has Mr. Skeele, but we think we are not exaggerating when we say that every single person who travels with us enjoys himself so much that, when possible, he comes back for more. One of the many inquiries we have received about our coming tour is from Mrs. Lee S. Dickinson, of Bridge-water, Conn., who writes:

"Your western excursion of last winter was so thoroughly enjoyable that I'll be glad to go with you again if I can. It was as nearly perfect as could be for me, and I think for the whole party. It is still a matter of wonder to me how you managed to give us so much at so small a cost."

We are really very, very enthusiastic about the itinerary we have worked out this time with the Northern Pacific Railway Company. It holds such a variety of charm, such a mixture of old world and new world places. The cruise on Puget Sound, giving a marvelous view of the Seattle skyline and the Olympic Mountain Range, will not soon be forgotten. The motor trip through the quaint old city of Victoria on Vancouver Island, thoroughly Eng-

lish in its customs, dress, and accent, will seem like a trip to Merrie England itself; and the beautiful Butchart's Gardens there, filled in March with a wealth of spring flowers, will leave a haunting memory of fresh beauty.

Ten whole days will be spent in Sunny California, and each will slip by

In the heart of San Francisco still stands the old Mission Dolores, established back in 1776 when the first land expedition reached the Golden Gate. The Mission is still used as a place of worship today, and will be visited by our party while we are in San Francisco.

like a bright bead on a treasured chain. Biggest thrill of all there will be our visit to gorgeous Yosemite National Park and the Mariposa Grove of Big Trees.

Later, when we reach Texas and cross the border into Mexico, we will come under the spell of another civilization and another clime. At Juarez, a city of 30,000 Mexican inhabitants, life will present a strange contrast to our own northeastern ways. Spanish, and not English, will fall on our ears. We'll see dark-eyed girls and swarthy men sauntering in the hot southern sunshine; brightly painted houses, rickety souvenir shops, and the old Mission, "Our Lady of Guadalupe," begun in 1659.

If you can possibly come on this trip with us, decide now not to miss it. You will enjoy it. We promise you that. *American Agriculturist* is host on the trip and we will exert ourselves, as usual, to make everyone thoroughly happy and comfortable. The best of everything is provided, and the itinerary includes—in addition to the places mentioned above—many other outstanding attractions. Our "all-expense" ticket (which costs approximately

"So that's the crow's nest. Could I have a peek at the little darling?"

\$325 depending upon where you join our party) covers everything, and remember that you will have no travel responsibilities. Everything is done for you. Let us send you a copy of the complete itinerary, which gives all details about the trip. Just fill out the blank and mail it to E. R. Eastman, *American Agriculturist*, Box 367, Ithaca, N. Y.

If you think you can come with us, we suggest that you make your reservation soon, in order to have first choice of Pullman accommodations. If anything happens later to prevent your going your money will be refunded in full.

Johnny Got Sick

"**W**HAT happened to Johnny Steinbrugger? Why didn't we hear him on Major Bowes' program on Thanksgiving Day as you said we would?" Letters asking these questions are coming to us from *American Agriculturist* readers in every state in the Northeast. Here is the story of poor Johnny's bad luck:

A week before Johnny was to appear on Major Bowes' program, he and his father hitch-hiked from Albany to New York City for his audition. It was evidently a hard, cold trip, because soon after Johnny got back home, he developed pneumonia and had to be taken to the hospital. For several days, he was so ill that even his father and mother, his little brother Silvertop, and his pretty sister Gladys, were allowed to see him only through the pane of glass in the door to Ward A-1.

Our only news of Johnny was from his Dad, until yesterday when a scrawled note came from Johnny himself, saying that he is back home and "pretty tired". It will be some time before Johnny will be able to go back to highschool, or to take up his dancing again; but we hope that later he will get another chance to appear on Major Bowes' program. So many readers have asked for Johnny's present address that we are giving it here: Johnny Steinbrugger, 105 Jay St., Albany, N. Y. Johnny would enjoy getting letters from A. A. folks, and he needs some cheering up after losing the chance that he hitch-hiked all the way from California to get.

Nine Year Old Girl Saves Boy

An *American Agriculturist* Life Saving Award has been given nine-year-old Virginia Snow of North Brookfield, N. Y. Last winter she and her nephew (aged five) were playing with their sleds near a pond where men were cutting ice. The boy, Lwellyn Pierson, slid into the pond. In some way, she can't tell just how, she succeeded in pulling him out of the water.

Lwellyn's mother writes: "The water was not terribly deep, but it was over the boy's head, and we feel sure that Virginia saved his life. We can't understand how she succeeded in getting him out without falling in herself."

The framed award reads as follows:

**AMERICAN AGRICULTURIST
LIFE SAVING AWARD**

Presented to Virginia Rose Snow

Who, at the age of 9 years, rescued Lwellyn Pierson when he slid into a pond from which ice had been cut.

New Year packed with more
happiness than you have ever
had before.*

Personal Problems

"Judge Not—" Say Readers

IN OUR November 25 issue, we published a letter from "Worried Mother," saying that her daughter was engaged to a young man in the community for whom everybody had high regard, as he had come there several years ago, worked hard and made a place for himself. Then, his first employer in the neighborhood told the mother that the young man (Eddie) had a prison record, having stolen a car and served time for it. "Worried Mother" wanted to know: Should they break off the match? Should they tell their daughter and let her decide? Should they confront Eddie with the facts and demand that he break off the match, or should they say nothing?

Many interested readers have written in reply to "Worried Mother" and we have forwarded their letters to her. The letters have been the most fair, heartening bunch of letters we have ever been privileged to read. Not one thought that Eddie should be condemned. "Judge not—that ye be not judged" was the gist of most of them. Granted that Eddie did wrong when he was young; they said, he paid his debt in serving his time; he has proven himself as wanting to go fair and square and he should be helped along this path by the girl he loves, and the encouragement of her parents.

Most, however, thought that Eddie should tell his bride-to-be before they are married to save her possible shock and unhappiness afterward. Some thought the girl's father should tell Eddie he had to tell her; some thought her parents should tell her. All agreed that if the girl was worth a grain of salt, she'd forgive him . . . and continue the match.

But let's ask several of our readers to speak for themselves:

"That young man paid for what he did when he went to prison. The way he has acted shows he has tried to make up for his past mistake. I think you ought to advise him to tell your daughter about it and if her love for him is great enough, she will forget it and keep on loving him."

Understanding Needed

"I think the girl's father should go to the young man and tell him that he knows of his wrong-doing and that he honors him for making good in spite of his handicap. The father should ask the man to tell his daughter about the affair, explaining the possible effect on the lives of their family, if they have any. If he consents, that will be added proof of his honesty, and whether or not the girl still accepts him will prove her fitness, or unfitness, to be his true, loving wife."

"In case this plan does not work, I believe the mother should, very kindly, tell the girl, but also tell her the disgrace was not in the punishment but in the act, which has long since been lived down, and that the only reason for bringing it up is the possible attitude of others if the fact leaked out. Then let the girl

decide, without more advice.

"If the parents cannot talk sympathetically and understandingly, they'd better keep still than make things worse. In any case, I think the neighbor should have kept still, but he didn't and I'm still for the young man."

* * *

"Life is indeed tragic if a mistake, even a serious one, made in early youth, can never be left behind no matter how fine a life one lives afterward."

"On the other hand, we know the stigma of a prison record is something which, right or wrong, clings to a person and may at some time cause unhappiness to himself and his family. So I think Eddie's fiancée should know the truth and decide for herself whether she is willing to assume the risk for herself and her children. The risk does not seem too great to me if they live where the prison record is not generally known, but no one but your daughter can decide. In any case, the knowledge now will cause her far less unhappiness than if she should discover it after marriage, when in addition to the shock of the discovery she might feel that her husband had not played fair with her in not telling her. The telling will be painful for both of them, but most hard things are less difficult when faced squarely than when evaded."

* * *

Future Most Important

"If Ed loves the girl enough, he will confess his past to her. The truth would almost surely come out, anyway, and she should know about it before saying the final 'I do'."

Apparently the crime was committed while Ed was very young. Any young boy under certain circumstances could be led astray. We all make mistakes sometimes; some profit by them more than others. The fact that this young man committed a crime and served time for it is of secondary importance in making this decision. The important thing is: Has the young man profited by his experience and is he trying his best to follow the straight and narrow path now?"

* * *

"I do not think anything is gained by concealing such things that have happened in the past. Telling now may save a loved one a great deal of unhappiness in the future."

"By all means tell your daughter, Worried Mother, and let her make her own decision as to what she'll do. If you sit quietly by and let her take the step without trying to save her from unhappiness later on, you are as guilty as the young man, if he evades his duty."

* * *

"The mother and father of the girl should sit down for a business-like talk with Ed. This should be sympathetic but thorough. All of the facts, good and bad, should be gone into. If at the conclusion of this talk they conclude that he has in him the stuff for regeneration they should extend to him the helping hand. If not, they should oppose the marriage. In either case the daughter should be informed as soon as they have reached a conclusion. They should not condemn the young man on his prison record; they should forget that and consider only the question of what there is in him today."

* * *

"Worried Mother says she has a deep and bitter problem in her heart. This isn't her problem, it's one that belongs to those two young people. Eddie spent two years in prison and paid for his crime against society. He has made good and become a respected member of that rural community. He should tell his bride-to-be the truth so that no ghosts will rise up between them in the future."

* * *

"Tell your daughter, calmly and without malice, just what you have heard. Then she can talk it over with the young man and they can face life together squarely. If they love each other enough and his record since that car escapade is clean, I can't see why he shouldn't have a chance to live a normal, happy married life."

"I beg your pardon, Sir, but you dropped your billfold."

THE AWFUL PRICE YOU PAY FOR BEING NERVOUS

Read These Important Facts!

Quivering nerves can make you old, haggard, cranky—can make your life a nightmare of jealousy, self pity and "the blues."

Often such nervousness is due to female functional disorders. So take famous Lydia E. Pinkham's Vegetable Compound to help calm unstrung nerves and lessen functional "irregularities." For over 60 years relieving Pinkham's Compound has helped tens of thousands of grandmothers, mothers and daughters "in time of need."

Pinkham's Compound positively contains no opiates or habit forming ingredients—it is made from nature's own wholesome roots and herbs each with its own special work to perform. One of the most effective "woman's" tonics made! In liquid or handy to carry tablet form (similar formula). Try it!

don't WORRY

Why put up with years of needless discomfort and worry? Try a Brooks Automatic Air Cushion. This marvelous appliance permits the opening to close, yet holds reducible rupture securely, comfortably—day and night. Thousands report amazing results. Light, neat-fitting. No hard pads or stiff springs to chafe or gouge. Made for men, women and children. Durable, cheap. Sent on trial to prove it. Never sold in stores. Beware of imitations. Write for Free Book on Rupture, no-risk trial order plan and proof of results. Correspondence confidential.

Kernels, Screenings and Chaff

By H. E. BABCOCK

December 27, 1939.

Mr. Henry A. Wallace
Secretary of Agriculture,
U. S. Department of Agriculture,
Washington, D. C.

Dear Secretary Wallace:

Herewith I resign, effective immediately, from the Board of Directors of the Central Bank for Cooperatives. I am taking this action after thoroughly and calmly examining all of the implications involved in your recent decision to assume active control of the Farm Credit Administration.

Regardless of your intentions, and I believe that you are fair enough to recognize that, under the circumstances, they are open to questioning by cautious men, it is, in my opinion, extremely dangerous and unfair to the farmer stockholders to place the machinery of the Farm Credit Administration in a position where it may be utilized to enforce economic philosophies or to further political ambitions. I therefore cannot go along with your new arrangement, even in a position of very minor responsibility.

It is my sincere hope that the Congress of the United States will take early action to restore the Farm Credit Administration to its former independent status and to clear the road for its ultimate control by the farmers who borrow through it.

Very truly yours,

H. E. BABCOCK.

I feel that I owe to the readers of Kernels, Screenings and Chaff an explanation of the above letter.

HILL FIRED

As many of you have read, F. F. Hill, who succeeded W. I. Myers of Ithaca, New York, as Governor of the Farm Credit Administration, has recently resigned. *The truth about Hill's resignation, up to this time cleverly concealed by Washington, is that he was forced out of office by the President of the United States on the insistence of Secretary of Agriculture Wallace.* The headlines correctly should have read "Hill Fired" instead of "Hill Resigns."

WHY HILL WAS FIRED

Hill was fired because he has a mind of his own; because, along with his predecessors in office, Henry Morgenthau, Jr., and W. I. Myers,

he refused to permit appointments in the Farm Credit Administration to be subject to the approval of the Democratic Party bosses—a system which everyone knows is now in effect in Wallace's Department of Agriculture. He also was fired, in my opinion, because Wallace and his friends in the Department of Agriculture knew that with Hill at the head of the Farm Credit Administration they could never use loans to farmers to force them to comply with their theories of acreage control, or the employees of the Farm Credit Administration to help get the

Democratic nomination for President for Mr. Wallace.

As Hill himself pointed out when he resigned, "The principal job of the Farm Credit Administration is not the lending of government funds, but the supervision of a group of self-sustaining cooperative credit institutions in which the farmers of the country have over one hundred and thirty million dollars of their own hard earned money invested."

A LITTLE DICTATOR

I have a very wise friend who keeps repeating that what he fears under a dictatorship is not the big dictator but all the little dictators he will have around him. *Today, the United States of America has a little dictator over its agriculture,* a dictator who has gained his position at a speed which must at times have excited the envy of even Der Fuehrer across the water. The complete power of Secretary Wallace over the farmers of the United States is just about clinched now

that he has full and absolute control over servicing their credit needs. *The way is definitely open for him to say to a farmer seeking to borrow money, "You grow the crops I tell you, on the acreages I allot, or else—"* Also for indirect but nevertheless potent hints by his agents as to how the borrower should vote.

THE ISSUE

I protest, with all the vigor at my command, the rate at which the agriculture of this country is coming under political domination. I am absolutely sure that what is happening is gradually forcing farmers to a lower standard of living and robbing them of political effectiveness. If the farmers of the United States want to end up finally as the wards of the state, it is all right with me, but I would be totally remiss in my duty to the agriculture of the Northeast if I did not point out **what** is happening and if I did not **refuse** to be a party to it.

(Above): The government hoards surplus corn at a country shipping point in the Midwest. (Below): Thin cows wait hopelessly for feed from empty haymows and water from dry wells on many dairy farms in the Northeast. Meanwhile in two weeks' time corn advances 20 per cent in price. What a muddle!

Conducted by H. L. COSLINE

A Matter of Simple Justice

ON THIS page in the July 22nd issue we reported an unusual case concerning an up-State subscriber who was being sued in New York by a correspondence school. Suit was for full pay for a correspondence course which our subscriber did not complete. The Service Bureau sought the services of a New York attorney who agreed, without cost to our subscriber, to attempt to get a "Change of Venue", that is to require the school to sue in our subscriber's own county.

The attorney was successful in his efforts but the school put in an appeal. Now we are pleased to report what may be the final chapter in this case. On appeal, the original decision was upheld, and now the school must not only sue in the subscriber's own county, but in addition, must pay costs amounting to approximately \$67.00, almost one-half the amount involved, before they can bring suit. We predict that the case will never come to trial! In handling the appeal the lawyer was forced to go to the expense of having a brief of the case printed, and, inasmuch as we had promised our subscriber that there would be no expense, the Service Bureau assumed this cost. We make no pretense of handling legal matters for our readers, and undertook this case only because it appeared to be a rank injustice to require our reader to pay the bill or to go to New York City to defend the case.

May Serve as Legal Precedent

In commenting on this case the lawyer says: "It is regretted that the appeal made it necessary for the *American Agriculturist* to pay for the printing of the brief. That it did so, however, and has thus prevented an injustice in this particular action, impels me to express my highest regard for the efficiency and sincerity of its Service Bureau. It is not unlikely that this decision will be cited in other cases and that a vicious collection practice on the part of foreign schools may thus be terminated. I am happy to have been associated with you in this work.

"I most certainly concur with you that, as stated in a recent issue, farmers should not be induced to break contracts. It is submitted, however, that the jurisdiction of the Supreme Court should not be abused by institut-

ing in the Court of highest original jurisdiction actions whose proper forum is the local Justice's Court, to be tried hundreds of miles from the residence of the defendant, so that the defense is wholly impracticable."

Naturally, the Service Bureau is gratified over the outcome of this case, but again we repeat that this is an exception, and that ordinarily we cannot represent subscribers in legal action. We appreciate that the lawyer did so without charge, because he too felt that this was an injustice. We are grateful for this service and omit his name only because giving it might result in more requests for similar action which he obviously could not take.

Baby Chicks

The Service Bureau cannot handle complaints against baby chick hatcheries who are not advertisers in *American Agriculturist*. Every effort is made to be certain that hatcheries advertising in *American Agriculturist* are absolutely reliable. Of course, no hatchery can guarantee that chicks will live or remain healthy. We, however, guarantee that your order will be filled or your money refunded, and that every hatchery will fulfill promises and statements made. At all times the Service Bureau stands ready to attempt to settle unsatisfactory dealing with hatcheries that are advertised in our columns. Please do not ask us to handle baby chick complaints against non-advertisers.

One Dollar Truck Licenses

Available to New York State farmers are \$1.00 farm truck licenses, legal for use only on highways between portions of farms owned by one man. The roads to which vehicles are so restricted are described on the certificate. No licenses are required for tractors used for agricultural purposes, even though these may be used occasionally on roads to get from one part of a farm to another. Neither is it necessary to get trailer licenses for tools occasionally drawn by motor vehicles, such as hay racks or wagons.

Lost, Strayed or Stolen

"On Wednesday evening, December 6, 1939, our Ford car, Model A, Engine No. 1139418, 1929, was stolen from Church Street, Mount Holly, New Jersey, while my son was attending the movies. This car had been recently overhauled, had over-sized pistons and was in good running order. It is a black, Tudor car, and the only one we have. Would appreciate any information that might lead to its whereabouts. Our license was AU 56 L."—*Harry Chafey, R. 1, Pemberton, N. J.*

Far Lands For to See

"What can you tell me about companies getting men to go to South America to build refineries and pipe lines? I am interested in going there and would appreciate the information."

It is true that big companies frequently send men to foreign countries, but almost without exception they send highly trained men who have been with the company for years. There is seldom a shortage of unskilled labor there. Frequently this question arises because some individual who lives by his wits, has offered, for a certain advance fee, to furnish information about securing jobs in South America. The person who pays the fee is out the money and gets no value in return.

—Photo by Louis J. Gendler.

THE CAR of Louis J. Gendler of 23 Beech St., Greenfield, Mass., struck a soft shoulder, pulling the car off the road. It hit a tree and knocked over a monument.

Mr. Gendler was badly injured, laid up six weeks and three days and was paid \$64.38, in weekly benefits, because he carried our limited travel accident insurance policy.

25.00 FRAUD REWARD—American Agriculturist will pay \$25.00 for evidence leading to the arrest, conviction and imprisonment for at least 30 days of any person or persons who defraud or attempt to defraud on the premises an AMERICAN AGRICULTURIST subscriber who has Protective Service Bureau Sign posted on his premises at the time such fraud is committed. Claim for the reward must be made promptly, not later than the date of conviction. Reward does NOT apply to conviction for theft.

American Agriculturist guarantees fair treatment of subscribers by advertisers. We refuse many ads known to be unreliable but if a fraud slips in, you are protected. To take advantage of guarantee, subscribers must say, "I saw your ad in American Agriculturist", when writing to advertisers, and then report unfair treatment promptly to Service Bureau.

Membership in the Protective Service Bureau is confined to our Subscribers. Free service rendered members consists of the adjustment of claims, collections of obligations owed by supposedly reliable business concerns (does not include obligations between individuals or any claim that is more than 6 months old); and any inquiries a subscriber may make concerning the problems of farming or home making. Address all letters to Service Bureau, American Agriculturist, Savings Bank Bldg., Ithaca, N. Y.

Ring Out the Old

AS THE NEW YEAR OPENS, farm families can look back on a year filled with cooperative achievements. Though 1939 brought many emergencies, farmers of the New York Milkshed used the machinery they had created to meet each new problem as it arose.

DROUTH. Last summer Northeastern farmers asked for and received a special agricultural conservation program to restore seedings damaged by drouth. Because they had already set up in G.L.F. their own purchasing and distribution facilities, they were able to get seed promptly even in the off season, and to secure seed with the ability to make a crop, granted an even break in the weather.

WAR. Wild, speculative buying at the start of the war quickly pushed grain and feed prices to unreasonably high levels. G.L.F. buyers—the patrons' hired men—watching the market closely, counseled only day-to-day buying until true values could be determined. During this period dairymen who had established themselves as regular patrons were protected against the worst effects of the rise by a special 20% dairy feed formula, priced at pre-war levels. As expected, prices receded within a few weeks. G.L.F. patrons were able to buy their feed at

more reasonable levels, and have continued to do so.

BAGS. War pushed burlap prices skyward too; but here again G.L.F. patrons had a program in operation which enabled them to make full use of their bags by returning them to be reconditioned and used over again.

MILK. A shortage of dry milk products for animal feeding, which may be at least partially permanent, threatened to make poultry mash

costs rise out of all reason. Poultrymen—who have long depended on milk to provide some of the vitamins essential to growth, health, and hatchability—needed relief. It was ready for them, because G.L.F. had been following the work of colleges and experiment stations, and knew that Brewers' Yeast could ably fill the bill. Introduced in Special Laying Mash, this new ingredient has already saved thousands of poultrymen several dollars per ton on mash costs.

* * *

So 1939 ends, with some concrete and definite things accomplished in meeting the day-to-day problems which are continually arising in connection with farming.

Ring in the New

THE NEW YEAR finds half the world torn by war. Even in America we cannot escape some of the consequences of the strife abroad. Many farm products have benefited, while others, such as eggs and apples, have been affected adversely. Prices in general are up—but most of the things farmers buy are higher than the things they sell.

Still the farmers of the Northeast can face 1940 with confidence. For they have proved

that by working together they can do something toward solving most of their problems. And when new problems arise, as they will, the dairymen, poultrymen, croppers, and fruit growers of this region will meet them with the strongest weapon farmers possess—cooperation.

Winners in the FLOWER WORLD

by
MRS. GRACE
WATKINS
HUCKETT

W. Atlee Burpee
Company.

THOUGH snow may be falling outside and Jack Frost busy painting pictures on city and country windows, flower lovers are already beginning to think of gardens and of spring and of seed catalogs, and to wonder what exciting new varieties of old flower friends will show their faces in 1940. Eagerly awaited each year at this time is the list of new introductions, both those chosen by the All-American Selections committee and those presented by individual growers who did not enter the competition.

New varieties selected each year by the committee are those which have met coast to coast tests and been given satisfactory ratings by the judges. Seed for the contest may be submitted by anyone in any part of the world. Leading in the 1940 selections are Petunias, followed closely by a new race of sweet peas, a new dwarfed ageratum and several other popular flower families.

Efforts seem to be directed toward producing dwarf compact petunias which stand erect and make a dense rounded bush about a foot tall, covering themselves with medium sized blooms over the entire season from late spring to killing frosts. These are most desirable for bedding purposes, but they are also used in borders and window boxes. "Glow" Petunia, originating in Japan, is the winner of the silver medal, receiving more points in judging than any other silver medal variety given in the All American selections. It is a bright rose tint with lighter throat to enhance its liveliness and loveliness.

Cream Star petunia, developed in California, was also awarded a silver medal. It is dwarf, compact and covered with creamy white flowers all season long. These blossoms are bluntly star-shaped with a faint cream colored star overlaying the white; it is unique in flower form and color and comes very true.

Ageratum has been one of the most difficult flowers to true up or train to uniform growth and blooming abundance. Other members of this family generally have not been very uniform, especially in the very dwarf, compact class. The newcomer, Midget Blue, seems to be the dwarfest, most uniform and prolific bloomer of the midget class of ageratum. A silver medal winner, its dense tufts

Rose Pink Sweet Pea, one of the new spring flowering sweet peas which are said to be more heat resistant than others, bloom between the early flowering and summer flowering types, and have extra long stems.

(Left above):
Cream Star Petunia, silver medal winner, is covered with blossoms all season long. Flowers are bluntly star-shaped with a faint cream colored star overlaying the white.

(Above): Heavenly Blue Scabiosa is of a new rounded bush form, less than 2 feet tall and bearing a profusion of azure blue flowers. Never needs staking.

(Right): "Rosalie", a welcome addition to the snapdragon family. It is rust resistant, vigorous, tall and strong growing, and its color is topaz rose.

of rich blue flowers almost blanket the 3 to 4 inch plants, highly suitable for edgings, for beds and borders.

Rose Pink Sweet Pea, rose pink on a white ground, wins a silver medal. It is a member of the new spring flowering class of sweet peas claimed to be more heat resistant than others, and blooming between the early flowering and summer flowering types. They bloom on extra long stems and are valuable for florists or home growers. A bronze medal goes to "Blue", a member of this new spring flowering group, mid-blue in color. Honorable mention goes to "Lavender", its name and color in this new class.

The snapdragon family is enriched by "Rosalie", topaz rose or intense rose pink with deeper center and gold suffusion. It is rust resistant, vigorous, tall and strong growing. Seed may produce a few off-color rogues but it wins a bronze medal anyway.

Heavenly Blue Scabiosa is of a new rounded bush form, less than two feet tall and bearing a profusion of azure blue flowers. Flowers are smaller than the taller varieties and with short stems, but they are fully double, very high crowned and almost (Turn to Page 12)

THE Pioneer Spirit LIVES ON

Aroostook produces a tenth of the nation's white potatoes—enough to make four train loads, of 60 cars each, every day from September 15 to May 15.

AROOSTOOK COUNTY of Maine is big, almost as big as Massachusetts. It is north; Fort Kent is farther north than Quebec. Aroostook is as far from Boston as Boston is from Washington. Aroostook is young. Many a farm is operated by the man who helped cut it out of the timber. Aroostook takes its chance on one-crop farming while the rest of the Northeast is diversified. But like farming everywhere, it puts a premium on pioneer vigor and frontier spirit.

Nobody knew how big Aroostook was, a hundred years ago. Maine claimed everything to the St. Lawrence Highlands, but England said the line was just north of Mars Hill.

Timber was wealth in those days, and grain and hay were too, when they could be turned into cash. Boundary troubles in the 1830's helped change that. When the army moved in, to fight the Aroostook war, it built a highway direct from Bangor to Houlton, 135 miles through the Maine woods.

The war was a hot argument but not a drop of blood was shed. The soldiers marched away in 1839, and three years later the boundary was defined—a line famed the world over because it divides two nations and is guarded to this day only by a will for peace.

Faith in their own hard work, plus a reverent desire to be independent on their own land, beckoned pioneers into Aroostook's woods to clear, to build, and to grow. Commerce went over the Military Road, and cattle were driven out by drovers.

Somebody started to grow potatoes. A starch factory opened at Caribou in 1871 and paid 25c

a bushel for them. Aroostook was in for a boom. As if touched by magic, it began to grow more and better potatoes than were ever seen before.

More than 40 starch factories sprung up. Acreage of potatoes tripled from 1880 to 1890. Next came the Direct Line railroad and the boom was on. Not every year saw a good price, but the crop crept up and up. The record was in 1934 with 47 million bushels, or 300 bushels to the acre for some 6000 farms. Every year Aroostook turns out a tenth of the white potatoes for the whole United States.

* * *

STANLEY ANNETT is typical of many a good farmer in Aroostook. He started farming 24 years ago at Presque Isle with \$400. Four years later he bought the farm where he now lives, just out of Houlton. Every year he grows potatoes and every year the job gets more technical. He's seen them worth \$10 a barrel, and he's

seen times when he couldn't sell them at all. That's the gamble of the game. Today, his place is free and clear and he aims to keep it so.

Like good farmers everywhere, hard work, careful spending and close study are his guides to success. On them he raises his family. On those principles he believes they too will succeed. For Stanley Annett, Aroostook is a grand place to farm . . . the Northeast a good place to live. The pioneer spirit lives on.

This is the Annett home near Houlton. Mr. Annett recently bought another farm nearby for one of his boys.

Another in a series of advertisements which are

An Expression of Confidence

In Northeastern Agriculture

Most farms in the Northeast have paid for themselves many times over. About half have done so for their present owners; they are now free and clear. The others are mortgaged. Some 30,000 farmers of New England, New York and New Jersey are using a type of mortgage which gives the greatest degree of safety to the man on the land. It is the Land Bank mortgage which requires small payments in any one year, gives a man a long time to pay out if he needs it, and bears a low rate of interest. Ask for the folder "Farm Mortgage Loans through the Federal Land Bank." It gives full details.

The Northeast is a Good Place to Farm

KEEP Farm Credit INDEPENDENT

Former Governor F. F. Hill States His Position on Transfer to Department of Agriculture

FOLLOWING his resignation as Governor of the Farm Credit Administration on December 20, F. F. Hill stated his position on Farm Credit in a letter to presidents and directors of National Farm Loan Associations and Production Credit Associations in the Northeast. Bearing as it does on a subject of prime importance to farmers in this area, we are summarizing some of the important points brought out in this letter.

After referring to the transfer of the Farm Credit Administration to the Department of Agriculture by government order on July 1, the statement by the Secretary of Agriculture that "The Farm Credit Administration will not become an integral part of the Department of Agriculture," and the later announcement on December 14 that the Secretary of Agriculture had concluded that if he was to have responsibility for Farm Credit, he should also have control over it, Governor Hill says:

Dependable Credit

"There is only one issue in the situation so far as I am concerned. That issue may be stated as follows:

"Should the Farm Credit Administration be reestablished as an independent Federal agency supervising cooperative credit institutions set up to serve agriculture OR should it become part of a large Department of Government responsible for the administration of a great many other programs, some of which, regardless of the intentions of the administrators, may tend to weaken and perhaps ultimately destroy the cooperative credit system?"

"There are no personal issues involved so far as I know. The question is simply one as to what form of organization will best assure agriculture a dependable source of credit at reasonable cost over the years to come, without placing an undue financial burden upon the government.

"In my judgment this can best be done by restoring the Farm Credit Administration to the status it had before July 1, 1939, as an independent

agency of government reporting directly to Congress and to the President.

"It is obvious that any credit system must limit the extension of credit to sound loans if it is to be self-supporting. By a sound loan I mean a loan which the borrower can reasonably be expected to pay off in the normal course of his farming operations without the lender having to provide a substantial amount of management service or other assistance."

Mr. Hill doubts that a cooperative Farm Credit system can be successfully administered by the same Department that has responsibility for other programs of distinctly different types. Says he:

"If the development of Farm Credit into a strong, self-supporting, cooperative system is to be continued, it is essential that farmers, investors, and the general public clearly distinguish between loans made by Farm Credit and government loans which involve a substantial element of relief, or at least high risk and extremely heavy supervisory costs. Otherwise, forces will inevitably be set in motion which over the years will cause the Farm Credit Administration to depart from sound credit policies.

From Taxpayers' Viewpoint

"If the system should depart from sound credit policies, even though there be no present intention to do so, and even if the changes are gradual, operating expenses and the cost of loanable funds for use in financing farmers and stockmen will increase. Such an increase might easily make necessary annual Federal appropriations for operating expenses and losses, or perhaps some form of government guarantee if credit is to be provided at interest rates comparable with those obtained by home owners, business and industry.

"The Farm Credit Administration would then become more and more a government-owned-and-operated credit system leaning heavily upon the Federal Treasury for support with all the

dangers such a situation would hold from the standpoint of both farmers and taxpayers."

Mr. Hill clearly states that he is not criticizing the other programs administered by the Department of Agriculture, nor does he reflect on either the present or future administrators; and adds:

"It is not a question of the merits of other programs to aid agriculture. The question is whether Farm Credit can be kept sound and self-supporting when it becomes a part of **** a Department responsible for the administration of programs of the type referred to. I do not think it can be done over a period of years."

Savings Doubtful

On the subject of possible savings, Mr. Hill says:

"It does not appear probable that any saving to the government or farmers can be made by closer integration of Farm Credit with the Department of Agriculture. It may be stated that the government's capital investment in the system is intact and could be recovered in the event of liquidation.

"The Reconstruction Finance Corporation, serving business and industry, and the Home Owners' Loan Corporation and the Federal Housing Administration, serving city home owners, were brought together last July under the reorganization plan to form what is now known as the Federal Loan Agency. This is an independent agency of government which reports directly to the Congress and the President, just as the Farm Credit Administration formerly did.

"If business, industry, and city home-owners are entitled to Federal organizations whose sole activity is handling credit, why not agriculture?"

"After all, the principal job of the Farm Credit Administration is not the lending of government funds, but the supervision of a group of self-supporting cooperative credit institutions."

A Real Record

The record which the Farm Credit Administration has made in the past twenty years justifies some pride. Mr. Hill points out that a complete credit system for agriculture is now available, including long-time farm mortgage credit, production credit, and credit for farmers' cooperative organizations. This credit has been supplied at reasonable costs, and interest rates now being charged are the lowest ever made available to farmers and their cooperatives except through direct government subsidy. As stockholders, farmers elect directors and share in management, control, risks and saving. The ultimate goal is complete farm ownership and control. Farmers themselves have \$130,000,000 invested in the capital stock of the various units.

Mr. Hill refers to statements that, in an endeavor to carry on a sound operation, the Farm Credit Administration has been an unsympathetic lender and collector. In this connection he points out that farm foreclosures in 1938 were only about a third of those in 1932, and lower than any year since 1926. Farmers are making progress in paying off their debts, and since 1933 have paid over half a billion dollars.

In conclusion Mr. Hill states: "In my judgment, the sound credit requirements of agriculture will be best met in the long run by a self-supporting cooperative credit system under the supervision of an independent agency of government directly responsible to Congress and the President, such as existed prior to July 1, 1939. This agency might be headed by a single administrator or a bipartisan board as has been suggested from time to time."

"THE DIESEL D2 IS MY IDEA OF PERFECT FARM POWER"

—HAROLD C. STEWART, HOLCOMB, N. Y.

"My Diesel D2 pulls a four 14-inch bottom plow at second and third speed in average ground—handles the double disk, harrow and pulverizer at fourth speed with ease," reports Harold C. Stewart, Holcomb, New York.

"It operates my power take-off combine easily on soft and muddy fields, up hill and down, to cut my grain on time. It goes where I want it to go on muck land, working close to drainage ditches. It is suitable for any soil and does not pack.

"The Diesel D2 saves two-thirds on fuel expense over gasoline models now in use. It's my idea of the perfect farm power."

Just 102 years ago this fall the Chenango Canal, 97 miles long, 40 feet wide at the top and 28 feet at the bottom, was opened between Utica and Binghamton. Above you see what remains of that waterway at a point six miles south of Oxford along Chenango Trail, where it goes through Emmett Stratton's pasture. When the Canal was built, Emmett's grandmother boarded some of the laborers, from whom she contracted smallpox and died. The Canal cost 4½ million dollars, did great things for development of a new country, and was abandoned after 40 years of service.

*"When the days begin to lengthen,
The cold begins to strengthen."*

Fun and Profit

I LIKE to think of the farm family, including Pa, Ma and all the girls and boys, and the hired man if there is one, as a Board of Directors for that particular farm business. And I like to think of that Board, during the long evenings at this time of year, sitting around the table, or the old "settin'-room" stove, in session as a Board of Planners to lay out the work of the farm for the coming year. Appoint one of the boys or girls or Mother as secretary, to keep the records.

For two or three evening sessions of this Board of Planners, I give you the following suggested program:

Make a drawing, outlining each meadow on the farm, then lay out the plans for each of those meadows. For example, let's call one of your fields Field A, or No. 1, or the South Meadow. Let's say it contains ten acres. Maybe the drawing and plans of this particular field will look something like this:

1939 Silage corn	Fall plowed
1940 Oats —5 acres	
Barley —5 acres	
Seeded to mixture of clover, timothy and alfalfa	
1941 Clover hay	
1942 Clover, timothy, alfalfa hay	
1943 Silage corn, or cash crop, or both	

Questions that Arise

Your own Board can answer most of the following questions. If not, write to *American Agriculturist*, or your College of Agriculture, ask for bulletins, consult your county agent. Read Dr. Myers' Outlook on the opposite page.

- 1. Length of Rotation.** If you are going to go in for grass farming, you must plan for a long rotation.
- 2. How can you improve the quality of your hay?** There is much recent knowledge on improving hay quality. This includes the latest about different varieties of timothy and other grasses, seed quality of all grasses, and particularly of alfalfa. Maybe the Board of Planners should vote to do a little experimenting with new grasses. It would be fun; it might be profitable. For example, how about this new legume that promises so much—birdsfoot trefoil?
- 3. Pasture Improvement.** Great strides have been made in improving pastures. What is your Board going to do about it this year?
- 4. How About Liming?** Have you tested any of your soils for acidity? How much lime do you need?
- 5. Re-Seeding Because of Drought.** This does not apply to the above field, of course, but what are you going to do about the field that you seeded last year and that did not come through?
- 6. Have You Bought Your Grass Seed?** If so, did you give careful attention to quality and to cost? If you have not made your purchase, ought you not to do it before the last moment?
- 7. Shall You Sow all Oats or Barley, or a Mixture?** Here comes the possibility for raising some of the grain for home feeding. You should consider how far you can profitably go with home-grown grain, and do you know the proper mixtures? Now is the time to decide, not when you are ready to plant.
- 8. What Varieties of Oats and Barley Should**

You Use for Best Results? Where can you get the seed?

9. What Variety of Silage Corn Will You Plant this Year? Are you sure that the corn you have been raising is giving the best results? Better appoint some member of the Board to look this matter up.

10. Get Prices and Figure Cost of Your Planned Program. Where can you cut cost without impairing efficiency?

These same questions apply to every other crop raised on the farm.

Such planning saves money, time, and worry after the season's rush starts, and not the least of the results is getting the interest of the boys and girls, and of father and mother too, in the work of the old farm.

There will be more suggested business for your Board of Directors in later issues. Write me about your meetings, and the problems discussed. We will pay a dollar for every good letter we can use.

"Any darn fool can sit up all night, but it takes a good man to get up at five o'clock in the morning."

Outlook for Farmers?

AS A LIFELONG student and teacher of Farm Economics under the guidance of Dr. Warren, and as a successful Governor of the Farm Credit Administration of the United States, no man is better able to discuss the outlook for farmers than Dr. W. I. Myers (known

Meet Mr. William F. Gelder, who, as postmaster, has distributed *American Agriculturist* to the farmers living in the vicinity of Bellona, Yates County, New York, for 32 years.

Mr. Gelder believes he has the longest record of service of any postmaster in the State of New York. What about it? Can anybody beat this record in New York, New Jersey or New England?

In addition to his duties as postmaster, Mr. Gelder has conducted the general store in the village of Bellona for over 44 years.

In passing, we want to express our appreciation of all postmasters and the Rural Delivery men who in almost every post office in the Northeast handle accurately and efficiently great bundles of every issue of *American Agriculturist*. The postmasters and the R.F.D. men are and have always been just about the best friends farm folks have.

to his friends as "Bill"), whose article we publish on the opposite page.

If his suggestions are read and followed, they may save you a hundred times the price of your subscription to *American Agriculturist*.

"There's a Heap o' Satisfaction"

NOTHING that has appeared in *American Agriculturist* in a long time has caused more general enthusiasm among our entire staff than our Full Cellar Contest and the hundreds of letters which we received as a result of it. Some of the prize-winning letters are printed in our Household Department, on Page 26, but they are by no means all of the good ones we received. In fact, it made the editors sweat to try to pick the winners.

This contest and these letters are exactly in accord with one of the fundamental policies of *American Agriculturist*, and that is that farm folks should get more of their living from their own farms, and depend less on buying their food and other supplies out of the markets at high retail prices. Not only will this policy of raising more of your own home supplies save money, but it adds much to the general happiness of farm life. Don't miss reading these letters.

What Does Your Inventory Show?

BY THIS time you have probably taken your inventory, but if not, there is still time.

The only way most farmers save anything is by increase in inventory, an extra cow or two, a good tool, etc. Taking an inventory shows up these gains. It also is good for a credit statement, and is a valuable record to have anyway.

Calfhood Vaccination

VACCINATION of mature cows for Bang's Disease does not work and is unsafe, but experiments in calfhood vaccination so far indicate that this is a successful way of controlling Bang's Disease or Contagious Abortion. It should only be practiced on heifers from five to eight months of age, and never done except with the advice and help of a competent veterinarian.

Weeds cost United States farmers \$44,000,000 a year. So the farmer who studies and applies the best practices of weed control is definitely adding to his annual income.

Eastman's Chestnut

A GROUP of my friends were talking about how taste governs demand for food. For example, there are people in big cities who have used evaporated milk instead of whole milk or cream all their lives, with the result that they like evaporated milk better. And, incidentally, that is something for fluid milk producers to think about.

To illustrate the point, someone told the story about the dairyman who had watered his milk for half a lifetime, and then he attended a revival meeting and got religion. He concluded that if he wanted to go to Heaven, he'd have to stop watering his milk. The next day an old lady who had long been one of his retail customers called him on the telephone and told him with considerable emphasis that she no longer wanted any more of his milk. When he asked why, she replied:

"Because it has a yellow scum on it!"

"Cautious Optimism"—

A Good Northeastern Farm Slogan for 1940

By W. I. MYERS
Head of the Department of Agricultural Economics
and Farm Management at Cornell.

WINTER is the logical time for making plans for farm work during the coming year and, perhaps less definitely, for mapping out a general outline of what is to be done for several years ahead. Because of the unsettled state of the world, we are faced with a good many uncertainties which make it difficult to chart a course; but although these difficulties complicate the situation, they make it even more important to figure our plans as closely as we can.

It seems to me that the facts that we have point to several policies which farmers must consider. You may not agree with all of my conclusions, but I am quite sure you will want to think them over carefully.

1. Avoid Over Expansion—It seems to me that now is no time for drastic changes in your farm program. Instead it is the time for orderly development of plans, not only for the coming year but for some years to come; and for those with a small farm business who can do so without undue risk, the time may be favorable for moderate expansion.

The one thing we can expect with reasonable certainty is a price level which is likely to fluctuate widely. If the present European War develops into a long conflict, the world price level will rise; and so long as we maintain our policy of a fixed price for gold, prices in this country will follow world prices regardless of whether or not this country gets in the war. Personally, I think we can stay out, and I certainly hope so.

Fortunately for agriculture a rise in prices will bring a better adjustment between prices of farm products and the prices which farmers must pay for supplies. When prices rose during the last World War, prices of farm products rose more rapidly than the cost of distribution or the retail price of food. When prices dropped drastically following the World War, prices of farm products dropped faster and farther than either the cost of distribution or the cost of living in the city. Prices of farm products have continued low and need to be raised considerably to bring them into adjustment with other prices. There is every reason to believe that past history will repeat itself, although it will not repeat itself exactly.

City consumers have become accustomed to low prices for food, but I do not expect any severe opposition from city consumers to reasonable increases in prices for farm products. Rising prices will result in increased employment in cities. Consequently the total income of consumers will be greater than it is at present, to the profit of both city and country.

2. Reduce Debts—I think we are justified in assuming that farming will be more prosperous the next few years than it has been the last decade, and rather than use these profits for over expansion, I suggest a reduction in farm indebtedness. In this way you will be putting money where it cannot be lost, and a dollar saved in interest payments is just as good as a dollar saved in any other way. In addition the present or near future may be the last time you will have an opportunity to refinance your farm mortgage on a long-time amortized basis at the present very low interest rates. The outlook is toward higher interest rates on borrowed capital as long as the trend of prices is upward.

Of one thing we can be certain—the longer the European War lasts and the higher our prices go, the more severe will be the readjustment when the much-desired peace arrives. That is one fact we should have learned from experience of the last World War, although there are many reasons for believing that we did not learn our lesson very well. If and when prices rise substantially, those of us who believe in a managed currency to control wide and violent price changes may get some recruits from those who fear the results of a price level which is

Laying plans for the coming year's farm work would be easy if we could clearly foresee future events. We cannot do that, but past history gives some indication of what may happen. A careful study of this page will help you.

too high. Wherever they come from, we will welcome all such additions to our forces.

3. Repair Buildings—I do not need to remind you that farm buildings and farm equipment have been neglected in the last decade. If agricultural income improves, I can think of no better place for part of it than to improve our agricultural plant, including homes, farm buildings, and equipment, to a point where it will be more efficient. Such action will result in lowering the cost of production of farm products, and what is equally important, it will increase the enjoyment of living on a farm.

While we are speaking of building, let's talk for a moment about city building. Aside from the effect of prices on prosperity, I can think of nothing more important than what we speak of as the building cycle. Construction in this country has never been even. There have always been a few years when construction has been on the increase. When it reaches the peak, construction decreases for approximately an equal length of time. At the start of the last war, building construction was declining from a recent peak; while at the present time, building construction is rising after a long period of relative inactivity. Judged on what has happened in the past, building will continue to increase for some years and will have an important and favorable effect on general business prosperity.

4. Build Up a Financial Reserve—This will give you a factor of safety in the future and will help cushion the shock of any reaction we may get after the war is over. There were plenty of persons who wished in 1930 that they had done this rather than use cash for further expansion.

5. Prepare for Severe Competition—If the price level rises, the prices of farm products will rise more rapidly than the cost of transportation. Consequently farmers living in western states will find it easier to ship their products to eastern markets to compete with ours. Such a con-

dition will have its good features as well as its bad. Surely northeastern farmers living right at the doorsteps of the best markets in the world should be able to hold their own, but it does point to the importance of continuing to lower production costs and working for better marketing of our products. We have in the Northeast some of the best cooperatives in the country, and in coming years we will need their help as much as, and probably more than, we have in the past. We are unusually fortunate in the Northeast in having farm organizations that will pull together. Our New York State Conference Board of Farm Organizations is unique, and the groups which make up the Conference Board have shown good horse sense in handling emergency farm programs without losing sight of the future.

6. Lower Production Costs—Prices of individual farm products will fluctuate around the general price level depending on the size of the crop and the demand for it. In the last war prices for milk, apples, and eggs lagged behind the price level; and the price of wheat and beans rose faster than most farm products. Probably the same situation will occur now, although increased consumer buying power will help to keep milk, apples, and eggs from lagging too far behind. At any rate, if farmers realize this tendency, it may help them to lay their plans, and particularly to use every means, such as better use of fertilizer, better seed and better animals, to cut production costs. Speaking of milk, we now have a more orderly marketing system which should also help to keep the price of milk in line with production costs and the prices of other farm products.

When prices are going down, it is a good time to put off buying until the last minute. On the other hand when prices are rising, the building up of a reasonable inventory of farm supplies is justified and profitable. However, you should do this gradually. Otherwise you will bid up prices, just as housewives did when at the beginning of the present war they decided to lay in a supply of sugar. They remembered that the price of sugar went up during the last war, but they forgot that it went up only after the war had been going on for several years. They bought a lot of sugar last September, and the price went up temporarily.

FARMS ARE GOOD PROPERTY

A good farm in the Northeast is good property to own, and it appears to me that in the years ahead such a farm will be even better property than it has been for some time. In fact, for the young fellow who has the right training and a reasonable amount of savings to invest, this is a good time to start farming. It is a much better time to start than it was from 1920 to 1930, when a good many of the men now farming bought land.

There is no good time for beginning to farm on a poor farm. As the farm situation improves, many will be tempted to put some poor land back into production. Rather than do that, I think it is a good time to set out a lot of this poor land to trees. That will remove the temptation to grow cash crops on it, and the trees will be an investment which will increase in value.

In suggesting some guides for your farm planning, I have kept three things in mind. The first is past history. When war broke out in Europe in 1914, there were few persons living who could remember first hand the effect that a major war has on prices. As a result, there were few who foresaw the effect of the war, and in addition there were few who felt that the war would last as long as it did. The situation is different now. There are plenty of people who remember what happened in the last World War, and most of them believe that the present war will be a long one. Past history shows very (Turn to Page 23)

**"TRUCK FARMING" doesn't
always mean
"GROWING VEGETABLES"**

A GOOD many farmers have discovered that their farm work, regardless of what kind it is, gets a lot easier and more profitable when they buy a Ford V-8 Truck.

The reason is that the Ford Truck is really a farm implement—rugged and dependable in the field, fast and economical on the road. Unlike so many farm implements, it is never put away for the season. There is always work for it to do. In winter, equipped with power take-off, it grinds the feed and saws the wood. In the spring it is out in the fields hauling seed, fertilizer and tools. All through the harvest it is a time and labor saver. And all year round it is back and forth from farm to market.

In 1940 you're pretty sure to find the exact Ford V-8 Truck that can make this kind of "truck farming" a paying proposition for you. There are 42 body and chassis types, 6 wheelbases and a wide choice of special equipment.

No matter what size your farm, check the advantages of a Ford V-8 Truck by making an "on-the-job" test.

Producers' Agency Proposes Changes in Milk Order

LOOKING forward to May 1 when the price amendments to the Federal-State Milk Marketing Order for New York City expire, the Metropolitan Cooperative Milk Producers' Bargaining Agency, at a meeting on January 3, proposed three amendments to the Order. Petitions on these amendments are being sent to Secretary of Agriculture Wallace and Commissioner Noyes. If they are approved, dairymen will vote on the amendments some time before May 1.

The first amendment would change the method of setting the Class 1 price. Instead of basing the Class 1 price on butter as has been done up to date, the price would be based on evaporated milk. The price of milk used for evaporation is set by a national formula which has been operating successfully since 1935. If the amendment finally goes into effect, this price, plus any premiums paid producers, will be used in figuring the Class 1 price. If the proposed method were in use at the present time, it would give a Class 1 price for January of \$2.85.

This amendment continues the principle followed in the past that the Class 1 price of milk should be related to the general price level. However, evaporated milk is a product that com-

petes more closely with fluid milk than does butter, and therefore is a better measure of the price of fluid milk.

There is also a provision to prevent a decline in the Class 1 price below \$2.49 a hundred before April 1, 1941.

The second amendment would require dealers to pay about 28c a hundred for skim milk where milk is made into cream or butter. This naturally would add to the returns dairymen receive.

The third proposed amendment to be included in the petition would require dealers to make payments into the producers' settlement fund each week rather than each month as they have done in the past. This would prevent the use of dairymen's money by dealers for cutting retail prices and insure the successful operation of the pool. On some past occasions payments have been slow in coming in, and there has been some uncertainty that all payments would be made by some dealers.

As the delegate body met in Syracuse, there was much confidence that putting these amendments into effect will prevent any such drop in milk prices as farmers experienced a year ago and that the milk marketing program will, as a result, be more stable and constructive.

Boston Milk Marketing Order Gets Results

SINCE February, 1936, milk marketing in the Boston milk shed has been conducted under provisions of a Federal Milk Marketing Order administered by Samuel Tator. Since that time it has been amended on two occasions, and previous to that time three other Marketing Orders were in effect for varying lengths of time.

The base price to producers for the month of November was \$2.226 per hundred for 3.7 milk in the 200-mile zone. The price the producer gets is a blend of the Class 1 price, which at present is \$3.13, at handlers' plants located more than 40 miles from Boston, and the Class II price for all other milk, which at present is about \$1.526. For the month of November about 66 per cent of the milk sold in Boston was sold for fluid purposes.

Under the able administration of Mr. Tator the Marketing Order has been giving general satisfaction to dairymen. Commenting on the situation, John McGrath of the Milton Cooperative Dairy Corporation, Milton, Vt., says:

"The Federal Milk Order for the Boston market has been a life saver for the New England farmer. Prior to the Order the farmer was obliged to take what was left after the dealer deducted the expense and profit. Today the farmer has a price paid him, based on the use made of his milk. The different farmers or their organizations do not have to compete in the market as before. In fact, the cut-throat competition between different selling agencies has been eliminated.

"It would be a nice thing if all farmers could work closely enough together so that there would be no need for an Order, but as that is impossible, we do need a Federal Order, not only for New England but all milk markets."

tion and everyone that I have spoken with unhesitatingly praises the work that has been done. I think I would be putting it conservatively to say that, if the License came up for a producer vote, at least 90 per cent of them would support the License. It is the first time since I have known anything about New England that such a great majority are united in supporting an issue."—J. Ralph Graham, Boscawen, N. H.

"As far as the terms of the Boston Milk Order are concerned, the less change made, the better the Order will operate, because there are always some distributors who would like to upset the operations of the Milk Order to their own advantage by bringing new court cases. The present Milk Order having gone through the Supreme Court, it would appear unnecessary and undesirable to make any material changes in the Order at the present time, except in the price of milk, which should be adjusted as conditions require adjustment."—Wesley H. Bronson, Treasurer, New England Dairies, Inc., Charlestown, Mass.

"Concerning the government Order controlling the handling of milk in the Boston milk shed, I think the whole scheme has been of material benefit to the milk producer, and I think as a whole they are very much in support of continuing the scheme. Every possible effort should be made toward simplicity and economy. The distribution of the escrow funds was a day that will long be remembered in New England. The farmers as a whole made good use of the money in paying accumulated bills and making long-needed repairs and replacements."—O. M. Sherbino, General Manager, New England Dairies, Inc.

Here are other comments from New England which are self-explanatory:

"I have talked with a great many farmer producers and farm leaders in the last few weeks about the milk situa-

PURINA EMBRYO FEEDING

-builds Chicks before They're Hatched

A BABY CHICK inside a hatching egg feeds on the yolk and white material, just as a chick feeds on starting feed out of a hopper after it hatches. That's why hens that are producing hatching eggs need a special ration.

In addition to laying lots of eggs, they have to put into those eggs a plentiful supply of the many necessary food elements that the chick embryo needs to grow and develop. If the supply of certain of these elements runs low, the embryo dies—that's the cause for so much low hatchability.

Not only that, but the egg must also contain a reserve supply of food to give the chick a good start after it hatches. This is the way you get high livability.

There is only one way of putting those food elements into the egg for the embryo, and that's through the feed which the hen herself eats.

If you want to produce eggs of high hatchability, ask your Purina dealer about the Purina Embryo Feeding Plan. Ask about Purina Breeder Lay Chow to be fed along with your home grown grain, or Purina Layena, the complete, all-in-one feed. Both feeds are specially fortified with Puri-Flave and other ingredients for high hatchability and the production of embryo-fed chicks. See your Purina dealer and ask him for full details of the Embryo Feeding Plan, the plan that's designed to give you high hatchability, and strong vigorous chicks after they're hatched.

STEPPED-UP FOR HIGH HATCHABILITY

AS WE GIVE,
WE LIVE

DURING the first few days of the New Year we think of new beginnings... resolutions... self-improvement. While there is an everlasting need for developing ourselves, never did we need to give of our strength more than today. Never was there a greater need of sharing all of our blessings with others less fortunate. Never have we so needed to believe that there is a living God, and that He and He only can direct our paths.

So, as we face new beginnings and make new resolutions, let us especially keep before us the fact that *As We Give, We Live*. We can give in a far-reaching way...

with a gentle voice that will carry a message of gladness.

"I was thirsty and ye gave me drink."

with outstretched arms to lift loads that are baffling weary souls.

"I was naked and ye clothed me."

with feet swift to carry food to the hungry.

"For I was an hungred, and ye gave me meat."

with a mind to sense needs and make burdens light.

"I was a stranger and ye took me in."

with a warm heart overflowing with love and sympathy.

"I was sick, and ye visited me."

May we together, in this practical way, put real significance into our lives during the New Year ahead.

"Help us, O Lord, clearly to perceive that to receive,

and to have, imposes the obligation to give and to share.

Help us to measure our responsibilities by our privileges."

The Right Fertilizer

Complete Fertilizers Now Formulated so they give Good Results in Both Wet and Dry Seasons...

THIS is being done by using materials whose plant foods are both completely available and resistant to leaching. This is quite simple with materials supplying phosphoric acid and potash, practically all of them meeting these requirements. Urea and ammonia nitrogen also meet the requirements for nitrogen.

Urea Nitrogen is Quickly Available ... and Stays Put

Urea nitrogen becomes available to crops even in relatively dry soil. Numerous investigators also report that urea is resistant to the leaching action of rains. They have found that urea goes to work quickly and keeps work-

ing, whether season is wet or dry.

"Urea gave the largest yields," says **Maine Agricultural Experiment station**. In reporting results of experiments with nitrogen fertilizers for potatoes (Bulletin 134), the highest yields, 313 bushels, were secured with urea. The data show that the urea plot was the highest-yielding plot in one dry year and in three years "when the rainfall was sufficient to cause serious leaching."

More and more manufacturers formulate complete fertilizers and top-dressers with urea nitrogen because it is—

1. COMPLETELY AVAILABLE
2. RESISTANT TO LEACHING
3. LOW IN EQUIVALENT ACIDITY and is
4. GIVING THE DESIRED RESULTS.

The Fertilizer Outlook for 1940

By T. E. MILLIMAN

FARMERS in 1940, in spite of the European war, need not expect sharp increases in fertilizer prices.

Many will remember the course of fertilizer prices in the first World War, when in 1917 wholesale prices of nitrate of soda jumped to \$97.70 a ton, sulphate of ammonia to \$99.00, muriate of potash to \$437.50, and 20% superphosphate to \$22.75 a ton at Atlantic port plants, without bags. On 20% superphosphate the farm price was not less than \$30.00, a high price certainly, but one which reflected much less increase than occurred on other fertilizer materials, because America was self-sufficient on superphosphate only.

Today, twenty-three years later, the nitrogen sources available to American farmers, industry, and our government munitions, have been greatly enlarged. We have still available all the Chilean nitrate that may be needed, with an uninterrupted access by sea to the coast of Chile via Panama Canal. We have also an enlarged capacity for the production of by-product sulphate of ammonia to the extent that the size and numbers of steel mills, and illuminating gas plants have been increased.

The most significant change in the national nitrogen situation has been brought about by the development of three enormous plants for the fixation of atmospheric nitrogen. The largest of these is in Tidewater, Virginia, another is in the mountains of West Virginia, close to coal, and the third is at Niagara Falls, Ontario, where advantage is taken of low rates for the use of electric power. The combined productive capacity of these plants when added to the nitrogen sources referred to as being available to us in the last war, adds up to a figure in excess of our national needs, even in the face of a possibly active munitions market. Nitrogen should go up in price very little in the next six months, and is now at prices of a year ago.

Phosphorous, or superphosphate as we know it, is found more abundantly in America than elsewhere in the world. The ability of the phosphate mines of Florida and Tennessee to produce the raw phosphate rocks, and of our exceedingly numerous acidulating plants to convert rocks into superphosphate by the use of sulphuric acid, far outstrips any demand that the farmers of this country have ever made. The national productive capacity on sulphuric acid has also been

stepped up considerably in recent years. Superphosphate may, however, cost about 5 to 7 per cent more in 1940 because of sharply increased ocean freight rates on phosphate rock from the loading ports at Tampa and Boca Grande, Florida, to the Atlantic ports of Baltimore, Philadelphia, New York, and Boston, from which northeastern farmers get their superphosphate. The increased ocean freights also affect sulphur, which is moved from Texas ports on the Gulf Coast to the same northern ports and is there converted into sulphuric acid. Slight upward influences on superphosphate costs are also traceable to the increased value of the oil and the Negro labor used in phosphate rock mining.

Potash went sky high in the last war because Germany had about all of it. Farmers use close to 100% of the potash produced, and need not be worried about the price of it in this war. The lack of the need to worry is traceable to two situations, the lesser one being the return of the potash producing Province of Alsace to France at the Treaty of Versailles. France now has about 30% of the potash of Europe and is located far enough south of the North Sea to permit Transatlantic movement of ships with reasonable safety. French potash continues to be received in this country.

Of much greater significance to the farmers of U. S. A., however, is the rapid and continuous development of our own potash deposits which are very large. The earliest of these to be opened is the so-called Trona Bed, consisting of a brine lake heavy in potash and borax, in a desert region of southern California. Two actual mines, where rich potash ore is taken out at the 1,000 ft. level, are now in operation in the semi-arid cattle country at Carlsbad, in southwestern New Mexico. A third production at Carlsbad is about ready. Both the New Mexican and California grades of refined potash are fully equal, chemically, physically, and in crop producing power, to the best French or German goods. American production now accounts for about two-thirds of national consumption; and there is no fear of a shortage, or need for increased prices beyond reflecting increased costs of production, if any.

Fertilizer prices will be moderate for spring, 1940. Fertilizer is one of the cheapest and most result-getting commodities farmers can buy.

"I'm cleaning up on fines. They either have to stop by the fire plug or go through the sign!"

"TEN BELOW and Blowing"

By Romeyn Berry

THESE brisk mornings, when the family rush into the kitchen from the icy halls like a man stealing second base, when they get as close as possible to the hot stove and ask "how cold is it" and Elmer says "ten", everyone understands, of course, he means "ten below". If he had meant ten above he would have said so, and, indeed, on a warm morning like ten above no one would have asked.

There is a strange similarity about the breakfast conversations at our place on all mornings when the thermometer is well below zero—once the foundation of buckwheat cakes and sausages has been properly laid and work has begun on the second cup of coffee. On all such mornings table talk invariably starts with a few timely remarks by Elmer on the man who invented steel milking stools. Elmer's against him! Our county agent rather insists on our using steel milking stools, because they are more sanitary, and most of the year Elmer doesn't mind much, but when it's ten below he prefers wooden ones and isn't afraid to mention it.

There is something about starting a cold morning on a steel milking stool that we all regard as needlessly discouraging, and next year we propose to have two sets—steel ones most of the time as a concession to the county agent and the inspector; warm wooden ones, kept back of the kitchen stove, for our personal use on sub-zero occasions. We wouldn't think of doing anything calculated to endanger the health of the customers but we are pretty sure bacteria are inactive at ten below, and we're darn positive county agents and inspectors are.

Another thing we're apt to talk about over breakfast at ten below is the tea kettle. Any time my wife makes a pass indicating she has it in her mind to use the contents of that tea kettle for dish washing, Elmer and I have something to say; and it is that on all mornings when it is ten below and blowing, the tea kettle is to prime the pump with—and don't let anybody forget it. Commonly we are considerate and polite, but priming the pump is a mean enough job under the most favorable circumstances and the least a man has a right to expect is first call on the hot water.

Farming must have been a far less interesting occupation in the days before farmers had thermometers. Suffer-

ing from extremes of weather becomes almost enjoyable when you are given scientific assurance that you have a perfect right to suffer. Not that we couldn't tell pretty well how cold it is by the cats' milk dish at the far end of the cow stable. Our cow barn keeps pretty cozy on the coldest night from the radiation of the cows themselves, but once in a while the cats' milk dish gets a scum of ice on it, and that means it's at least ten below outside. I suppose farmers had something like the cats' milk dish to go by even in pioneer days before thermometers, and that the old fellows found the same grim satisfaction in stamping into the kitchen with the report "the cats' milk is froze again" that we do with our communique of "ten below and blowing."

Another pleasant thing on cold mornings is looking up in the farm diary what she was a year ago. (People who don't keep a farm diary miss a lot). That valuable literary production is apt to be brought out about the time the stove needs another stick of wood, and Elmer says he "couldn't eat another pancake to save himself from getting hung for it", and a peek through a scratch on the frost-encrusted window shows it isn't nearly light enough yet to see to work. About then we push back in comfortable repletion and look up what she was a year ago, and are strangely pleased to learn, "January thaw started in. Eaves dripping at daylight with soft breeze out of the South. Bright sunshine. Mr. Updike came over and we worked all day without coats or mittens on the new hen house."

An entry like that is distinctly encouraging. It rather makes us enjoy the prospect of cleaning up the rest of the barn chores and getting in a few licks at the woodlot even though it's ten below and blowing. And if that isn't enough to encourage the troops, I'm apt to turn back at random to something like this:—"June 28. A scorcher. 82 at sunrise. Dry and no dew. In the lot at 7 and got in five big loads from the East lot by dinner time. Finished this year's haying at 5:30 with four more loads. Too hot and tired to eat any supper. Drank glass of milk and went to bed at 7:30."

That isn't a bad thing to read after breakfast on a cold morning. The moral of it is, of course, that farming always

BETTER
DAIRY FEED!

MANY dairymen forget that it takes the equivalent of 25 lbs. of 4% milk daily to cover overhead and feed costs of maintaining the average dairy cow. Profit comes from the production they get above 25 lbs. daily.

A good average cow, giving 30 lbs. of 4% milk daily, on an average grain ration, should be fed 10 lbs. of grain daily. It is not unreasonable to expect a high-quality Beacon Dairy Ration to increase her daily production a pint (1 lb.) or more per day.

On this basis for every 10 lbs. of Beacon Dairy Ration you could get the price of a pint of milk more than you could get by using 10 lbs. of the average ration. In other words the difference in production per ton of the rations would be 100 quarts of milk.

But equally important, Beacon Dairy Rations will help to maintain the condition and health of your cows—thereby helping to increase production through successive lactations and lengthening their productive life.

Why Beacon Dairy Rations are Better

The reason for all this is the Beacon policy—a policy which definitely states *that every ingredient used in Beacon Feeds must be of first quality and must make a distinct contribution to the feeding value of the final ration. All ingredients are blended according to the latest scientific research and the soundest feeding experience.*

This policy has guided us from the very beginning. Even when the price of certain high-quality ingredients increases, we never cheapen our formulas or let down our standards. That is why thousands of Northeastern dairymen have proved that it pays to buy Beacon—even though it may cost a few cents more per bag.

For more detailed information about our specialized Dairy Rations, see your nearest Beacon Dealer or write us for a Free Copy of the new dairy booklet, "Profitable Dairy Management," by P. E. Newman.

HOLDING IT STRAIGHT

toward a Living Price for Milk

THE machinery of the State and Federal agreements is in good running order. It's doing a good job. And dairy farm co-operatives are holding it straight on its course toward a **LIVING PRICE FOR MILK**.

Farmers have proved conclusively that *they can* manage their own industry if given a fair chance. But there must be no let-down in their efforts, no change in their methods. If the machinery of the State and Federal agreements needs repair or overhauling, let's not go at it blindly—let's ask the engineers who built it to tell us what should be done.

For today we must stand watchfully on guard against those who would throw a monkey-wrench into the machinery . . . against those who try unceasingly to wreck the helpful Federal and State agreements . . . and who overlook no chance to weaken the organizations that have built and supported these agreements. So let's hold to what we

have. Let's keep it in good running order. For only by that means can we keep our prices where they belong.

Never before in the history of this milk shed have dairy farm organizations been able to control their own industry. Never before have farmers been able to write their own price tag for the milk they sell. Now they have the opportunity to do both. And now—as never before—they should fight to protect those hard-won rights . . . and to resist all efforts that would take them away.

For nearly a quarter of a century, the Dairymen's League has fought and worked and sacrificed so that **ALL** farmers could have such rights. Because we knew that when **ALL** farmers worked together, fought together and stuck together, no dealer nor group of dealers could take our rights and our rightful prices away from us. And that means a happier spirit among farmers and happier farm homes.

Establishing Alfalfa

By J. S. OWENS,
Connecticut State College of Agriculture.

ATENTION to a few details will practically insure a stand of alfalfa. Except that the omission of certain treatments is more likely to invite failure, there is little difference between starting alfalfa and properly starting the more common forage crops.

Since alfalfa will produce a large crop of valuable feed, it should make satisfactory returns on the best land on the farm. However, with liberal fertilization, it will do well on coarse textured, "light" soils which are often considered poor and not satisfactory for shallow-rooted crops. Where the water table is within three feet of the surface, or on soils which are "heavy" and wet, either because of topography or compact subsoils, serious injury frequently occurs the first or second winter. Even on moderately wet soils, the addition of some alfalfa seed will usually make a better hay crop than clover and timothy alone.

Preparation of Soils

Liming. Alfalfa is more sensitive to acidity than most other farm crops. Liming to reduce the acidity to between pH 6.3 and pH 6.7 is one of the inescapable requisites in the preparation. Most unlimed Connecticut soils are strongly acid (around pH 5.2) and require about three tons of limestone (or two tons of hydrated lime) per acre. With strongly acid soils it is safest to apply the lime the season before seeding, or in the spring before summer seeding. Moderately acid soils (pH 6.3-pH 5.8) require one to two tons of limestone and may be seeded soon after harrowing the limestone into the surface soil.

Fertilization. Since alfalfa produces large yields of hay and pasture high in feed nutrients it is not surprising that it takes large quantities of minerals from the soil. Fortunately alfalfa secures its own nitrogen from the air and only the minerals, calcium, phosphorus and potassium, must be supplied. Liberal additions of these before seeding aid in starting a crop, in reducing winter injury, and in maintaining good yields and stands over a long period. From 400 to 600 pounds of superphosphate, 20 per cent or equivalent, and 100 to 200 pounds of muriate of potash per acre are usually desirable. It is best to apply enough phos-

phorus before seeding to last several years, enough even for the life of the crop. Potash can be applied more effectively as a topdressing and, unless manure is used, a yearly application is often desirable, especially on coarse textured soils.

The Seed and Seeding

Varieties. Only the hardy or northern grown variegated varieties are suitable for Connecticut conditions. Of these the Grimm has been used the most widely, chiefly because the producers have placed it on the market with certification seals which insure identification. Canadian Variegated, Hardigan, and other varieties which have been developed in the northern

states are equally satisfactory but identification is sometimes difficult or even impossible.

Amount of Seed. Even a few pounds of seed scattered evenly on a compact, smooth seedbed, and covered lightly (one inch or less) will make a thick stand. Very thick stands mean small, weak plants. The following amounts (pounds per acre) will furnish ample seeds for thick stands when seeded carefully:

(1) 12-15 pounds alfalfa or (2) 12 pounds alfalfa, 2 pounds timothy for establishing alfalfa. (3) 4 pounds alfalfa, 6 pounds red clover, 4 pounds timothy for introducing alfalfa.

Mixture Number 2 has many advantages for conditions favorable for alfalfa. There is not enough timothy to cause serious competition but there is enough to make a turf which will reduce winter injury, reduce lodging of the first crop and fill in spots where alfalfa fails, yet not decrease the quality of the hay appreciably.

Mixture Number 3 contains ample clover and timothy to make a good

crop without the alfalfa. Under conditions favorable for alfalfa it may make a satisfactory alfalfa-grass mixture after the second year.

Inoculation

Inoculation is necessary on land which has not grown alfalfa recently and costs so little that it should never be omitted. Secure a handful of soil from about each of a half dozen thriving plants in an established alfalfa field, dry in the shade (don't heat), sieve, and mix about a quart to a bushel of seed just before seeding. Slightly moistening the seed with a sugar syrup (equal parts sugar and water) before adding the soil will make more soil adhere to the seed.

Editor's Note:—Slightly less troublesome is the use of one of the commercial inoculants on sale at most farm supply stores.

Time of Seeding

It is essential that alfalfa make a vigorous growth of at least six inches the first season. Other problems concerning the time of seeding are chiefly

(Continued on Page 12)

HAVE YOU SEEN THE New McCORMICK-DEERING TOOLS FOR 1940?

Plows and tillage tools of every variety and description, for all soil and land conditions, are available in the McCormick-Deering line. They are built in several sizes to make possible the most advantageous use of the power and speed in each of the new Farmalls.

Great strides in design have been made for 1940 by International Harvester engineers! The good values of other years have been outdone all along the line. Unless you have seen the new McCormick-Deering Tools, with their new crop-saving, time-saving improvements, you have no idea what really good farm equipment can do for you.

Introduction of the four new Farmalls has brought an entirely new line of simplified, improved Farmall machines. Many are designed for use with the wonderful new "Lift-All" hydraulic lift. Others are built for manual operation and are priced at new low levels.

Tractor drawbar machines and horse-drawn machines have come in for their full share of improvement. There are outstanding values in store for you in plows, tillage tools, planting equipment, etc.

McCormick-Deering dairy equipment is setting a new pace with a brand-new cream-and-stainless-steel cream separator, a new portable milker, and modern coolers in new sizes.

So it goes! New values—new improvements—new opportunities to save by seeing the International Harvester dealer! See his display of 1940 tractors and tools—or phone him and ask him to come out to your place.

● Planters and cultivators to meet every need have always been outstanding equipment for McCormick-Deering Farmalls. And this is just as true today with the new Farmalls. A great new line of tools has been engineered by Harvester for these new all-purpose tractors.

"Aw shucks, Ma — you've got those black spots before your eyes again!"

NATURAL FOOD for BIGGER, BETTER CROPS

To improve yield and quality, feed your crops with Natural Chilean Nitrate of Soda. It is the world's only natural nitrate . . . natural food for bigger, better crops.

Chilean Nitrate is guaranteed 16% nitrogen. It also contains, in natural blend, small amounts of other plant food elements—protective elements such as iron, manganese, magnesium, boron, iodine, calcium, potash, zinc, copper and many more. These protective elements act much like vitamins in their effect on your crops.

Use Natural Chilean Nitrate. It is well suited to your crops, your soil, your climate.

Establishing Alfalfa

(Continued from Page 11)

those of convenience and economy. The following are being used successfully:

- | Spring
(April 1-May 15) | Crop Association |
|---|------------------|
| (1) In fall sown rye. | |
| (2) With oats: $\frac{3}{4}$ bushel if cut for hay; $1\frac{1}{2}$ bushels if pastured. | |
| (3) Without companion crop. | |
| Summer
(July 1-Aug. 15) | |
| (1) On harrowed oat stubble. | |
| (2) Following tobacco or other early harvested tilled crop. | |
| (3) Following early cut hay. | |

Seeding in rye is increasing in popularity. It demands complete liming before seeding the rye. The seed is scattered on the rye before the growth starts in the spring; then harrowed lightly to cover most of the seeds. Many seeds will cover without harrowing. However, a light harrowing is generally helpful. The rye can be pastured, or cut early for hay or bedding.

Seedings with oats should be made early and only where some lime has been used previously. A light seeding of oats and early cutting will give the alfalfa a better chance and not reduce the hay yields very much.

Cutting and Pasturing

If seeding is done early in the spring and conditions are favorable for alfalfa, there should be a growth large enough to pasture or to make hay in late July or August. Sometimes two crops can be secured. Such removal will not injure the stand, provided the alfalfa has made a good growth and is approaching maturity before the cutting. September cutting is usually disastrous. It is much better to cut or pasture in October, at the end of the growing season.

Winners in the Flower World

(Continued from Page 1)

ball-like in appearance. They never need staking.

The popular and reliable marigold family is awarded a bronze medal, this time to Limelight, a pale primrose or deep cream in color, really an early flowering Dixie Sunshine or incurved chrysanthemum-flowered type. Limelight comes true and early, is free flowering and of uniform growth, is stronger than Early Sunshine.

Among honorable mentions is Rose Marie, a rich bright rose China aster in the new Early Giant class. It is wilt-resistant, very large, is long and strong stemmed with long, heavy petals and fluffy centers. Branches develop from the base, a great advantage in cutting.

Royal Blue Salvia is an annual farinacea variety introduced from England. Its growth is much more erect, of richer blue, and gives abundant long stemmed spikes of cutting flowers. Foliage and stems are grayish green.

From Holland comes a wild flower originally discovered in Northern Africa. It is called Convolvulus, Lavender Rosette. It is highly suitable for the rock garden, making a delightful rosette of leaves, spreading a foot or

more and bearing a cluster or rosette of 1 1/4 inch blue morning-glories, white throated with dark blue veining, not over six inches off the ground.

Marigold Yellow Pygmy grows only 8 inches tall, a compact, rich green ball of foliage surmounted by small, double button-like flowers of light lemon yellow.

Last year's selections of annuals had varying degrees of success when grown by individuals, some being highly successful, others not so popular. The hollyhock Indian Spring, a beautiful pink annual blooming the first year, seems to have come up to expectations. As one may expect from highly hybridized stock, the seedlings are frail and need to be protected, but the results more than justify the extra trouble. A second year of bloom can be expected from them.

The aster Early Giant met with favor because of its resistance to disease; also, because of its attractive lavender blue color which improves with age. The stem inclines to be a little weak, but its other fine points offset this weakness.

There is much variation in the reports on the red morning glory Scarlett O'Hara which received the 1939 gold medal. Some were highly enthusiastic, while others failed entirely with it. It seems to do exceedingly well under favorable conditions, yet never is a tall climber.

Apparently the same varying reports come regarding the petunias Hollywood Star, Apple Blossom and Lady Bird. Apple Blossom and Lady Bird met with more favor than the Hollywood Star. Scabiosa Blue Moon needs ideal conditions to do its best. As a matter of fact, several growers thought that it showed little improvement over the kinds already existing.

These varying reports seem to indicate that some selections are more successful in one part of the country than in another. One can tell only by experience which is best adapted to her own location. The fun of waiting to see a new flower bloom is in a class all by itself—a joy that I would not miss for worlds.

I was much pleased with the performance of the zinnia Will Rogers, introduced in 1939. It is bright scarlet and dahlia flowered, fine for cutting or for the border. A red Fantasy zinnia which others have liked is Wildfire. The creeping zinnia Linearis, although introduced some time ago, needs to be better known because of its charming single yellow flowers and its particular usefulness as an edging plant.

Grass Seed Supplies

ALFALFA — For the entire country the 1939 crop of alfalfa is estimated at 1,357,900 bushels, which is 31 per cent above a year ago and 44 per cent above the ten-year average. Retail prices this spring will probably be about the same as they were a year ago.

RED CLOVER—Crop is estimated at 1,713,700 bushels, which is 10 per cent below last year's big crop and 72 per cent above average. It is predicted that prices of red clover seed will be a little higher than they were a year ago.

ALSIKE—Estimated crop is 304,300 bushels, 24 per cent below a year ago and 9 per cent below average.

TIMOTHY — Estimated seed crop is 1,412,800 bushels, 10 per cent more than last year but 18 per cent below average. Growers are reported as receiving about \$1.00 a hundred more than a year ago. Therefore, it is expected that retail prices will be up slightly from last year.

SWEET CLOVER—1939 crop is estimated at 1,351,600 bushels, which is 81 per cent above last year, 71 per cent above average, and 15 per cent higher than the previous record crop in 1937.

The combined supply of alfalfa, clover and timothy seed is about 8 per cent higher than last year and 29 per cent above the average.

Want better fence? INSIST ON THIS QUALITY CERTIFICATE

Now you can buy—with certainty—definitely better fence. You buy feeds and fertilizers of *specified* quality or formula. For years railroads and industrial firms have bought fences to specifications. Now you can buy our fences at regular fence cost, and get with them a certificate showing that they meet certain minimum high quality specifications.

The certificate testifies that all fences of Pittsburgh Steel Company manufacture are made of genuine copper-bearing steel of an analysis developed expressly for premium quality fences; the wire is uniformly zinc coated, by the charcoal-wipe process, successfully, with an average minimum of .8 oz. of zinc per sq. ft. of surface, using the purest quality of zinc which can be obtained. The resulting fences are as brilliant in performance as they are brilliant in appearance.

Be sure to get a specimen copy of the new fence Certificate, which gives more complete information about our specification quality fences and how you can identify for yourself this quality of fence by examination of the fence itself. Write today for your specimen copy of the Certificate; then make sure that your fence dealer gives you this quality of fences. They cost no more.

NORTHEASTERN *Slants* ON THE *National* NEWS

■ No Trade Pact With Argentina

UNCLE SAM'S best hoss-tradin' efforts failed this month when trade talks between United States and Argentina broke down. The talks, which have been going on since August, got nowhere because the two countries produce too many farm products which compete. Unfortunately, failure of the negotiations makes it less likely that United States and Argentina will become better friends than in the past. They have often opposed each other in many Latin-American matters, and it was hoped that trade pact would pave way for better understanding and closer cooperation.

Reciprocal Trade Agreement Act, under which Secretary of State Hull has concluded trade treaties with 21 nations, is due to expire June 12, and a bill to extend it for three more years has been introduced into Congress. In his annual message, President Roosevelt pleaded for its continuance, as one way America could help to bring about world peace. Failure of trade talks with Argentina, it is believed, improves chances for extension of the Act, since the proposed Argentine pact was the one which drew the most opposition.

SLANT: There is no doubt that mutually profitable trade agreements between nations make for friendship and peace; but the trouble with the Administration's trade program, as far as farmers are concerned, is that it is being pushed along with another Administration policy which is diametrically opposed to it—the AAA crop control plan. Farmers cannot see the point of having government pay them not to produce crops, and then turn around and import the same thing from a foreign country. Nor can taxpayers who foot the farm relief bill see the point. The reciprocal trade program would be ideal if no two countries produced the same products—but that's a big IF.

■ "The State of the Union"

EARLY this month saw a gathering of all clans in Washington, as Senators and Congressmen assembled for opening of third session of 76th Congress and prepared to listen to President's annual message on "the state of the Union."

Addressing joint session of House and Senate, President Roosevelt spoke gravely of international situation and stressed that this country could not find security by pretending that the European war is none of its business. America, he said, should take an active role in world affairs—not by sending American boys to fight over there, but by constructive efforts toward peace. In particular, he urged:

1. That Congress give authority to continue the present reciprocal tariff reduction program, which both the President and Secretary of State Cordell Hull consider the most promising contribution which United States can make toward lasting world peace. (Authority for program expires in June. Considerable opposition to it, especially on part of farmers, has developed, and Administration sees its

trade program in danger. For further discussion of this, see "No Trade Pact With Argentina," on this page.)

2. That more money be voted for national defense in order to protect this country from peril of war. While strongly urging this, President also declared that this country's final defense lay in finding a solution for our own economic troubles so as to avoid the path of dictatorship and to justify democracy. "As a united people," he said, "we must keep ablaze on this continent the flames of human liberty, of reason, of democracy, and of fair play as living things to be preserved for the better world that is to come."

ANOTHER YEAR "IN THE RED"

Next day, Congress heard another White House message—this time on state of the Union's needs and pocket-book. Budget submitted by President for fiscal year ending June 30, 1941, calls for spending of \$8,400,000,000, which is \$2,176,000,000 more than nation's estimated income for that year, and is the nation's 10th annual deficit running into billions of dollars. Amounts asked for both work relief and farm relief were less than in past years, but sum asked for national defense is near two billion mark, or about one out of every four dollars which nation may spend in 1941.

NEW TAXES ASKED

To meet part of burden of national defense spending, President recommended that Congress find some way to raise \$460,000,000 in new taxes. Even if this is done, the 1941 deficit will bring the national debt to \$44,938,000,000 (on basis of President's budget). This figure is so close to \$45,000,000,000 (legal limit on national debt) that Congress is in uncomfortable position of having to raise new taxes in a Presidential election year, or raise national debt limit, or else reduce spending.

■ Dies Committee Reports

"UN-AMERICAN activities," especially those of the German-American Bund, have been getting plenty of publicity since Dies Committee, appointed by the House, went into action. A unanimous report recently presented to the House by the committee says that it has found:

1. That there are un-American activities here which are directed by foreign governments, but that these have lost some of their influence since the war started.

2. That it has evidence to show that not over 1,000,000 people in the U. S. can be said to have been seriously affected by these essentially foreign or un-American activities.

3. That "front organizations" are used to spread foreign "isms", and therefore well-meaning persons should be careful when joining an organization with a high-sounding title to find out what it really does and who controls it.

4. That Communists have made an effort to gain control of labor unions.

5. That Nazi and Fascist groups have promoted their work by trying to stir up racial and religious intolerance. Regarding evidence of Communistic influence in American Federation of Labor and in C.I.O., committee reported that Communists have had little

success in the A. F. of L., but that leadership of some 10 or 12 of the 48 C.I.O. constituent unions "is more than tinged with communism." Among these it listed United Cannery, Packing and Allied Workers.

Now pending before Congress is a resolution to continue the committee, although there has been some opposition to its methods as being in themselves "un-American." Another criticism heard is that the committee is doing work which properly belongs to the courts of law and to the Federal Bureau of Investigation.

■ European War Fronts

FINLAND continues to be center of interest in European theatre of war. Just when the world had decided that war was so mechanized by modern science that it had become merely a titanic struggle between tanks, underground fortresses, and high explosives in sea and air, there comes across the water thrilling tales of gallant white-clad ski troops in the Far North, gliding swiftly and silently across the glittering snow and ice-crustured lakes of little Finland; weaving in and out of her dark forests, and keeping at bay the Russian bear.

Russian-Finnish war is now about six weeks old, and Russian offensive seems to have bogged down on all fronts. Reasons why Russia, with a population of 180 millions, is doing so badly against tiny Finland, with its 4 million people, are said to be: 1. Finns' dogged resistance; 2. Russia's poor system for distributing supplies; 3. Too many Russian officers shot down in 1937 purge of Red army, causing shortage of brains and experience.

Finland, however, is still in deadly danger because she is now using everything she's got, and cannot replace men or munitions without more outside help. Also, Germany through her press is threatening Norway and Sweden if they allow the Allies to continue to send aid to Finland through their countries. Should Germany succeed in cutting off this source of supplies to Finland, it would be a worse blow than any the Russians have inflicted so far.

JUST BEGINNING

Now in its fifth month, the conflict between Germany and the Allies seems to have reached a stalemate until spring, with the prospect that the war will really begin then with a great German offensive by land, sea and air. Military experts estimate that 10 million men are mobilized in France, Britain, and Germany, and that each side is spending the winter in speeding up its war machine for a gigantic military showdown. Whether by that time the war between Germany and the Allies, and the war between Russia and Finland, will have become one huge war with France, Britain, Finland, and perhaps Norway and Sweden, on one side, and Russia and Germany on the other, is a question uppermost in the minds of many people.

■ Foods Bought With Blue Food Stamps

WHAT SURPLUS foods do people on relief buy with the blue stamps given to them by the government? According to December report of Bureau of Agricultural Economics, about one-quarter of the stamps are being used for butter and another one-quarter for eggs. Thirteen per cent is being used for wheat products; 34 per cent for fruit and vegetables.

The food stamp plan, which aims to move farm surpluses and to improve diets of needy families, was

started last May in Rochester, N. Y. Since then it has been tried out in a number of other cities, with some variation in method by which families secure blue stamps. In Rochester, plan provides for sale of orange stamps (which can be traded for food and other household commodities sold in grocery stores) to people on relief, WPA workers, and other needy families. With each purchase of orange stamps, purchaser gets free from government blue stamps totaling one-half the value of his orange stamps. The free blue stamps are good only for foods designated as surplus commodities by Secretary Wallace.

Up to Nov. 1, approximately 173,000 persons in 8 cities took part in the program, and these families received about \$1,272,000 in blue stamps for surplus purchases. Since May, surplus list has included butter, eggs, dry beans, rice, dried prunes, raisins, white and graham flour, oranges, grapefruit, fresh pears, fresh peaches, apples, dried onions, corn meal, pork lard, snap beans, cabbage, fresh tomatoes, and green peas. List is changed from time to time according to season and economic factors affecting the commodities.

■ What's In Store?

ECONOMIST Roger W. Babson is said to answer the question, "What's in store for the next 6 months?" with the following forecast:

Business: 10 to 15% gain over first half of 1939.

Trend: Some dip from current peak levels.

Politics: No new important legislation.

Markets: Uptrend, but no runaway prices.

Farmers: Prices, income and profits up.

Workers: Jobs, wages, strikes higher.

Retailers: 8% gain in sales; prices up 4%.

Consumers: Less than 5% rise in living expenses.

Realtors: Rents, values, activity steady.

Investors: Selected securities to strengthen.

Summary: Best 6 months in 10 years.

SLANT: We hope he's right about farm prices and income.

■ A "Quiz" That is a Quiz

EVERY TEN years, Uncle Sam comes around, regular as clock work, to make a call on each of his nephews and nieces and to ask them all about themselves. On January 2, the 1940 census got under way. Before it is over, more than 121,000 government workers will ask the questions and tabulate the answers.

Some of the things that Uncle Sam will want to find out this time, in addition to how many people there are in the country, what they do for a living, and how much they earn, are:

What percentage of young people, who have never had a job, want one.

What percentage of housewives would normally work at a paid job, if they could get one.

What percentage of the population works part time, and how much of the year are these people employed.

What farm products—both new and old—is industry using, and how much of what is used is raised on American farms.

What percentage of the population are farm hands. (**SLANT:** Thirty years ago, 16 per cent of gainful workers in this country were farm hands. Last census showed drop in this class of workers to 9 per cent. With WPA competing for farm labor today, 1940 census is likely to show further decrease.)

Government also plans to get all the facts on the housing situation. Questions asked will show whether houses

are occupied or vacant, rented or owned, single-family or multiple dwellings. Uncle Sam will also want to know whether you own a radio, whether your house is equipped with plumbing, refrigeration, and other conveniences, what cooking and heating fuels you use, what kind of lighting you have, and whether your house is mortgaged.

Many businesses, as well as government, will make their plans for the next ten years on the basis of what the 1940 census shows.

Farmer's Day

COST ACCOUNT studies compiled at N. Y. State College of Agriculture show that New York farmers and their helpers put in an average of 9½ hours a day during 1938. Average cost of an hour of farm work on all 75 cost-account farms studied was 31 cents. Most common working arrangement was for the regular hired man to work for a monthly wage and to get a house to live in, milk for family use, fruit, vegetables and similar farm privileges. Average cash wage for this type of help on these farms was \$56 a month. If the value of the privileges is added to the wage, it makes a total cost of \$74 a month to the farmer-employer.

Men who boarded with the farmer's family were paid an average of \$35 a month; the board being estimated to be worth \$25 a month. About 11 per cent of all the work on the farms was done by other members of the farm operator's family, who worked on the farm without pay.

More Farms Purchased

YEAR-END figures from Farm Credit Administration show that during last half of 1939 there was an increase in new farm mortgage financing for first time in several years. About 8,300 farmers and tenant families borrowed around 19½ millions from the 12 Federal land banks and the Land Bank Commissioner to help them to buy farms in second half of 1939. During same period year before, 7,500 borrowed a little over 17½ millions.

In the last four years, more than 80,000 families have financed purchase of farms through agencies supervised by FCA. After dropping sharply each year from 1935 to 1938, total farm mortgage lending by the land banks and Land Bank Commissioner for all purposes leveled out in 1939.

Farmers are now paying off mortgage loans from Federal land banks at faster rate than in 1929 or any year since then. Total payments, including regular installments, aggregated \$112,430,000 in first 9 months of 1939, compared to \$87,610,000 in like period of 1938.

Year-end figures also show more and more farmers using production credit associations for short-time loans. From the 532 associations, farmers borrowed last year \$323,700,000, about 21 millions more than year before. Report states that condition of loans outstanding shows noticeable improvement over 1938 in financial position of farmer members. In the six years of operation ending Sept. 30, 1939, these associations loaned farmers \$1,347,000,000, of which \$1,173,000,000 had been paid back by Sept. 30.

\$500,000,000 Rat Bill

Seventh Annual Convention of National Pest Control Association held in New York City recently reminds us that this country's rat population is double its human population, with each

rat doing at least \$2.00 damage annually, or a total of more than \$500,000,000 a year. To get rid of rats, Convention recommended expert use of extracts of red squill, or of certain mineral poison, or of bacterial cultures. If it's mice you're after, they said, omit the red squill and try either mineral poison or bacteria.

Besides rats and mice, Convention declared war on other pests. For cockroaches, silverfish, ants, etc., they prescribed various powdered insecticides. For moths, flies, mosquitoes, and bedbugs, they said lethal sprays do the trick. When all else fails, they recommended thorough fumigation with certain deadly gases to be handled only by specialists. These, they promised, would rid any premises of bugs and rodents.

Good Books to Read

THE COUNTY AGENT, Gladys Baker. The rise of the county agent is an interesting and important development in the field of government. This book surveys his transition from local itinerant vocational teacher of farming methods to his present leadership in national programs.—*University of Chicago Press.* \$2.00.

Good Movies to See

GULLIVER'S TRAVELS. Filmed in technicolor, this is a full length feature picture in animated cartoon form. It's a "tall story" of a sailor's yarn, told by Lemuel

Gulliver, an English sailor, who in 1699, was shipwrecked on an uncharted island inhabited by the strange little people of Lilliput, the tallest of whom is not more than 6 inches. It is comedy, melodrama, tragedy, all combined in one marvellous miniature drama, provoking laughter, thrills, and even tears.

GERONIMO. This is much more than a glorified Western picture. It is a blending of historic fact with dramatic fiction. The background is the Apache country of the Southwest, where from 1876 to 1886, Chief Geronimo terrorized the pioneers of Arizona and New Mexico, hating bitterly all whites because some settlers had massacred his family. Chief Thunder Cloud, who portrays Geronimo, is a full-blooded Cherokee Indian, a graduate of the University of Arizona. Grand entertainment for all lovers of the heroic action picture.

CHEVROLET TRUCKS FOR 1940

Best Haulers . . . Best Savers . . . and "BEST SELLERS" in the entire truck field!

Chevrolet—the nation's largest builder of trucks—now offers its great new line for 1940—56 models on nine wheelbase lengths, all of them selling in the lowest price range!

Extra-powerful Valve-in-Head Engines . . . extra-strong Hypoid Rear Axles . . . extra-sturdy truck units throughout . . . make all these new Chevrolets *gluttons for work*, whether you choose a Sedan Delivery or a Heavy Duty Cab-Over-Engine model.

And Chevrolet's famous six-cylinder economy . . . plus the exceptional dependability and long life of Chevrolet trucks . . . means that all of them are *misers with your money* when it comes to gas, oil and upkeep.

Choose Chevrolet trucks for 1940 and you choose the nation's greatest truck values . . . the trucks that have *proved* their quality leadership by winning volume leadership . . . the best haulers, best savers and "best sellers" in the entire truck field!

CHEVROLET MOTOR DIVISION, General Motors Sales Corporation, DETROIT, MICHIGAN

New Sealed Beam Headlights (with separate parking lights)

Full-Floating Rear Axle (on Heavy Duty models)

(Vacuum-Power Brakes, 2-Speed Rear Axle optional on Heavy Duty models at extra cost.)

More than ever, the "THRIFT-CARRIERS FOR THE NATION"

from SKEFF'S NOTEBOOK

By L. B.
SKEFFINGTON

Fruit Growers Oppose Farm Credit Change

THE New York State Horticultural Society at its annual meeting in Rochester voted its opposition to absorption of the Farm Credit Administration by Secretary Wallace, and urged Congress to restore it to independent status. It recommended that it be administered by a non-partisan board, with terms of members staggered to provide for continuity of policies and administration.

The Governor and the Legislature were urged to restore research items which have been cut from the budgets of the State College of Agriculture and the Experiment Stations. The resolution pointed out that sound research is vital to agricultural progress, that the economic need now is great, and that interruption or curtailment of such programs may prove more costly in the end.

The matter of a state apple advertising tax to be levied upon growers was referred to a joint committee of the Horticultural Society and the State Farm Bureau Federation. The society directed this committee to prepare a plan and in the meantime voted to oppose levying of such a tax. One of the principles outlined was that when and if a tax is levied it should be administered by growers.

The Legislature was requested to give agriculture representation on the Board of Regents.

The good work of the New York and New England Apple Institute was commended and all growers urged to support it.

Wessel Ten Broeck, Jr., of Hudson was elected president in place of J. Roe Stevenson of Cayuga. Mr. Ten Broeck was not able to be at the meeting as he is recovering from serious illness.

Vice-Presidents Percy A. Morgan of Lewiston, Brice P. Jones of Hall and Theodore Oxholm of Esopus were re-elected. M. E. Buckman of Sodus was elected fourth vice-president. Roy P. McPherson of LeRoy was re-elected secretary-treasurer. Wilbur Schumaker of Youngstown and M. C. Albright of Cossack were elected to the executive committee. Members of the committee holding over are Jay Gelder of Chazy, Frank W. Beneway of Ontario, Rolland J. Reitz of Cold Water and Theodore Cross of Lagrangeville.

Reviewing the not too bright conditions in the fruit industry, President J. Roe Stevenson of Cayuga also summarized favorable factors in the outlook. These he listed as follows:

- 1—On Dec. 1 there was less fruit in storage than a year earlier and less than the five-year average.
- 2—Use of the food stamp plan, if generally extended, would rapidly clean up surplus fruits and vegetables.
- 3—In some sections orchards are being eliminated, especially those on marginal land and of poor varieties.
- 4—There is greater attention to utilization of by-products which would relieve the pressure of low-grade fruit on the fresh fruit market.
- 5—The health value of apples is being recognized more widely.
- 6—There is rapidly growing sentiment for an apple advertising tax.
- 7—Government purchases of apples is helpful.
- 8—There are expectations that exports will pick up eventually.
- 9—The way great chain stores have increased their sales of apples and peaches is encouraging.
- 10—Increasing industrial activity already is with us. This should increase apple sales.
- 11—Normally a lesser crop, with bet-

ter prices, is in prospect for 1940, but no guess is hazarded as to the crop and prices two years hence.

Stevenson said that biggest problem before farmers is monetary reform. He quoted Frank Gannett to show that those countries which had revalued their currencies had lifted farm prices and pulled out of depression.

Interest in Non-Wash Spray

M. E. Buckman, manager of the Sodus Fruit Farm and former manager of the Wayne County Farm Bureau, said that during the past year he used a non-wash spray of nicotine and oil in place of the usual lead arsenate spray to control codling moth. Cost of the non-wash spray is considerably more than lead arsenate, but Buckman said he obtained as good results as he would have expected to obtain with lead arsenate. He noticed that the apples so sprayed were dull in color until about 10 days before harvest, when they colored satisfactorily.

S. W. Harmon of the Geneva Experiment Station said the non-wash spray was effective primarily for light infestation. He said more than three applications, or possibly four, would have a tendency to dull the apples. He was unable to give comparative costs for the season, but said that generally

speaking nicotine cost about three times as much as lead arsenate although there would be some saving of the cost of washing.

Wash at Low Cost

Frederick Cornwall, Jr. of Pultneyville said that he and his father had washed about 30,000 bushels of apples this season. The washing operation is done as part of the grading and packing operations and the cost of water and power, etc., is figured at one-fourth to one-half cent a bushel. He said they wash apples whether they come from the orchard dry or wet and find no trouble in storing wet apples.

Chester Lyman of Albion said he found brushing more satisfactory than washing for a small operator, as frequently the cleaner has to be stopped to permit handling accumulated apples. If fruit stays in the acid bath more than five minutes it may be harmed.

Attractive Apples Needed

Dr. A. J. Heinicke, head of the Cornell promology department, summed up the situation of New York growers as having "favorable growing conditions and reasonably favorable marketing conditions." The main thing, he said, is to make best use of these conditions.

Prof. R. D. Anthony of Pennsylvania State College said "we have got to make our apples more attractive to consumers if we do not see lower prices. These things can be done and not cost very much. Many growers may have to go to the wall if prices go much lower. Many will stay in business and make better profits."

Anthony said a large proportion of costs run on about the same level regardless of yield, indicating that one way out is to increase the yield and the proportion of high-class apples. "More growers go to the wall because they can't grow, rather than because they can't sell," he said.

Dr. F. A. Harper, Cornell, analyzed prices by varieties for the 1937 crop year to show that McIntosh, Delicious and Northern Spy, in that order, returned practically twice as much as other varieties. Three points he offered

were:

1—The market distinguishes sharply between varieties in price, even though consumers know little about varieties.

2—Difference in price between varieties is changing constantly. Over a period of 60 years Northern Spy averaged highest, and since McIntosh and Delicious came in they have been running ahead.

3—Of this point he said he was "less certain," but had found that Cortland started on about an average price basis and has showed little fluctuation. New varieties that, as a rule, do not show sharp rise after five to eight years, may not be expected to bring a premium, although it is possible there may be exceptions to the rule.

General trend of discussion at the sessions was that the industry needs to increase yield per acre, increase proportion of good apples, find some way to keep the low-grades from killing markets for good fruit, and do everything possible to increase consumption. In this connection the Apple Institute was commended for excellent work in retaining and developing market outlets.

Production Credit Association Meetings

This is the time for annual meetings of Production Credit Associations in the Northeast. These Associations, designed to provide short term credit to farmers for various purposes (including purchase of seeds, fertilizer and livestock), are part of the Farm Credit Administration system, with headquarters for this District in Springfield, Mass.

The Syracuse Association, serving farmers in Madison, Oneida, Onondaga and Oswego counties, will meet at 10:30, January 20, in the Masonic Temple in Syracuse. President of the Association is Ralph DeWolfe of Oneida. For the past six years this Association has made loans of over \$3,000,000, and there are \$700,000 of current loans outstanding.

The Olean Association, serving farmers in Allegany, Cattaraugus, Chautauque and Steuben counties, will meet at 10:00 on January 25 at the Knights of Columbus Hall in Olean. President of this Association is Francis Alvord of Friendship. This Association, in six years, has made loans of \$2,729,000 and now has \$465,000 of current loans outstanding.

At both meetings lunch will be served at noon, reports of officers will be given, there will be an election of directors whose terms have expired, and a talk will be given by H. B. Munger, President of the Production Credit Corporation of Springfield, Mass.

Gov. Lehman Points the Way

IN HIS New Year speech to the people of New York State, Governor Lehman said so much that merits the thoughtful consideration of all Americans that we are quoting briefly from it here.

Pointing to war-torn Europe and to the millions of men and women over there "who have been deprived of freedom and the right to live as human beings," the Governor spoke feelingly of the great contrast of peace and security that prevails in this country. He urged his listeners to safeguard the blessings and the traditions of liberty which are ours through the heroic fight of the founders of this Republic.

The task of the United States now, the Governor declared, is to keep ourselves "strong and independent in order to fortify civilization and help restore the concept of freedom and justice in a sick world." To do this, he said, we must solve our own social and economic problems in a democratic way, and we must strengthen our religious life and resist doctrines which spread intolerance of any class or creed.

"Injustice to any group or any individual," said the Governor, "will eventually tear down the structure of democracy. . . . We in this beloved land of ours maintain a strong defense in the two great commands, 'Thou shalt love the Lord thy God', and 'Thou shalt love thy neighbor as thyself'. American democracy will live so long as these commands are not forgotten."

Vegetable and Potato Growers Hold Fine Meeting in Utica

WITH THE largest winter-meeting attendance in years, conventions of the New York State Vegetable Growers' Association and the Empire State Potato Club in Utica were rated highly successful.

Henry Marquart of Orchard Park was continued as president of the vegetable growers, but in accordance with his request Roy A. Porter of Elba retired as president of the potato club. Mr. Porter has carried the load for several years and a year ago consented to re-election only upon assurance that it would be his final term. Porter is chairman of the Central-Western New York Potato Improvement Committee of the potato club and the State Farm Bureau Federation, which office he will retain. Harold Simonson of Glen Head, L. I., succeeds Porter.

The vegetable association again asked the Legislature to appropriate \$30,000 for greenhouses, personnel and equipment for a vegetable breeding program at the State College of Agriculture. A year ago the Legislature voted such an amount, but the bill failed to receive the Governor's signature. A number of growers expressed themselves to the effect that this appropriation would be a very sound investment for the state in view of results obtained in breeding new varieties. Some of them mentioned the new iceberg lettuce as indicating how an improved variety can regain markets.

Want Better Market News

Improved market news reports was urged by both groups in resolutions. It was pointed out that a start should be made to report truck movements because they frequently cause gluts and price breakdowns in markets. Only carlot movements are now reported and with many vegetables the carlot movement amounts to little, while the bulk of a crop may move by truck.

The potato club offered a number of points for revision and improvement of the state-federal market report on

potatoes. It urged that prices be given by variety, grade, area in which they are bought, whether they are upland or muck potatoes, that no price be quoted on a grade when there are no sales, and that Maine potatoes be quoted delivered price rather than FOB shipping point in Maine.

To carry out these recommendations it urged that \$3,500 cut from the budget of the State Bureau of Markets last year be restored, and that \$2,500 additional be provided for temporary seasonal help. As a result of the cut last year telegraph and teletype service was curtailed and, according to the potato club, the value of the market reports was lessened considerably.

Want Independent FCA

Both groups adopted resolutions demanding that Congress restore the Farm Credit Administration to independent status, and that it be administered by an independent board with members serving staggered terms, thus providing for continuity.

Both groups likewise declared opposition to discriminatory and punitive taxes which would impose hardship on any method of distribution.

The vegetable growers by resolution said that some published crop estimates had been a detriment and urged that any such reports be identified with the person or agency responsible for it.

The potato club recommended that the state brand be continued on a self-supporting basis.

Full indorsement was given to the work of the Northeast Vegetable and Potato Council and it was commended for developing a unified program of action for the 12 states in this area.

In Buffalo Next Year

The plan of the two organizations meeting at the same time and place, with one or two joint sessions and a joint dinner, was declared to have been very satisfactory. Accordingly, it was decided to hold a joint convention next year in Buffalo.

NEW DE LAVAL

MAGNETIC SPEEDWAY MILKER

The new De Laval Magnetic Speedway Milker is far out ahead, unequaled by any other method of milking—it's the world's best and fastest milker.

New, exclusive features enable the time-tested De Laval principles of milking to be applied still more effectively—magnetic pulsation control, uniform, rhythmic, vigorous milking action . . . new tough, long-lasting Delatex rubber parts . . . new Stainless Steel Comfort Teat-Cups with easy-to-clean, Sani-Cap combination teat-cup bottoms and milk tubes . . . new Fast-Flow, streamlined, one-moving-part pulsator which never re-

quires oiling . . . new polished, silvery, one-piece, durable, sanitary Stainless Steel Pail . . . new improved operating top with removable sight glass . . . these are just a few of its many exclusive features.

Whether you now milk by hand or by machine you have a real surprise in store for you when you first see its unequaled fast, clean milking . . . listen to its uniform, rhythmic action . . . notice how the cows respond to it . . . observe its convenience and ease of handling. And you must **SEE** and **TRY** it to really appreciate it.

DE LAVAL CREAM SEPARATORS

WORLD'S STANDARD SERIES

At the reduced prices for which De Laval Separators are now being sold they represent the greatest values in separator history. For 62 years De Laval's have always been best—that's why they are the most widely used. And the De Laval's of today are the best separators ever made; they skim cleaner, last longer, run easier, and are easier to clean and operate than any others.

See and try a new De Laval—your De Laval Dealer will gladly loan you one. Many separators in use today are wasting valuable butterfat and you may find a new De Laval will increase your cream check or butter money enough to pay for itself. Sizes for every need and purse—and sold on easy installment payments.

JUNIOR SERIES

This year . . . it will pay you to try

HUBBARD'S PROFIT-BRED NEW HAMPSHIRE

**BECAUSE OF BALANCED BREEDING
WE GIVE 30-DAY FULL
SATISFACTION GUARANTEE**

Start the chick season **RIGHT!** Buy **BREEDING** this year. Buy **BALANCED** breeding. Increase your poultry income! Select the "profit-bred" strain—Hubbard's New Hampshires.

Hubbard's 8-point Balanced Breeding program insures a "well-rounded" bird. The money-making characteristics are bred **INTO** the strain. The unprofitable features have been bred **OUT**. Hubbard's chicks are strong, vigorous, big-bodied, officially Pullorum passed. They live—grow fast—mature early—become excellent layers. And they have the stamina to stand up under continuous heavy laying.

Remember the quality of chicks you place in your brooder house determines the season's profits. So try a flock of Hubbard's New Hampshires this year. **SEXED DAY-OLD PULLET AND COCKEREL CHICKS AVAILABLE.** Rock Crosses for broilers. 30-day Full Satisfaction Guarantee. Mail the card to the right. Get your free Hubbard catalog before you buy chicks.

They live, inherit vigor and vitality.

They grow fast, feather well and mature early.

They become excellent layers of large-sized eggs.

Health Regulations and the Milk Supply

By LELAND SPENCER

IN THE previous article I mentioned that the milk supply for New York and other markets had been regulated to a considerable extent by health authorities. For the most part this type of regulation has been indirect. The health boards have not specified the number of farms that might produce

Leland Spencer

milk for any market but their regulations have tended to set up certain barriers that made it difficult for some producers to get into the market milk business who would have liked to do so.

For one thing the requirements concerning stables, milk houses, dairy utensils, cooling, and disease-free animals have called for the investment of much extra capital in the business of producing market milk. Interest and depreciation on these investments are continuing costs. Likewise the health regulations have meant added costs for labor, ice or electric cooling, and milk hauling.

Health authorities also have sometimes restricted milk supplies more directly by limiting their inspections to a certain area or by refusing to approve new plants or dairies when there was already an ample supply of milk for the market. The New York City Department of Health has limited its inspection of dairies to the region east of Ohio. Recent legislation in New York State provides that additional dairies outside the state may not be approved for markets within the state unless the Commissioner of Agriculture and Markets certifies that more milk is needed.

The payment of indemnities for removal of diseased cattle is a special health measure that has had much effect upon the supply and price of milk in the past 20 years. Since 1918 about one million head of cattle have been removed from New York State dairy herds under the TB eradication program. This job has been practically completed. In the past few years a considerable number of animals has been taken out for Bangs disease and Mastitis but present indications are that these programs will not have anything like the importance of the campaign against T. B.

It is difficult to judge the net effects of the various health measures upon the present milk situation. At times, certainly, the health regulations have tended to check the increase in supplies that would normally have come along with the growth of the market. It seems doubtful though whether we should now have any more milk in the pool, or any more surplus, if fewer and smaller barriers had been thrown in the way of milk production for the New York market.

Recently it has been suggested that the health authorities might control the milk surplus by withdrawing inspection from plants that have not shipped a major part of their milk as fluid milk or cream during a period of months, or perhaps a year. As I understand it, the thought behind this plan is somewhat as follows: The dairies and plants now under New York City inspection supply more milk than is needed at any time of year. (About 84 per cent of the total was used as class 1 and class 2 in November, 1939.) The unnecessary surplus in the pool pulls down the blended price. The result is that class 1 and class 2 prices have to be high

in order to give the producers who are essential to the market a living price for their milk. In other words, due to an over supply of milk, New York City consumers are charged more than is necessary for their fluid milk. Their welfare requires that the unnecessary surplus be eliminated. It is proposed to do this by withdrawing inspection from certain plants. This in turn will cut off some of the dairies and reduce the milk supply. (According to the terms of the Federal and State orders for the New York market, only those producers are permitted to share in the New York pool whose dairies are approved by the health authorities of New York City or other municipalities in the marketing area).

Obviously the plan as stated is open to serious objections. In the first place it must be recognized that all producers who have invested considerable sums to comply with the health regulations and who have continued to meet all sanitary requirements have vested rights in the markets for fluid milk and cream. Interest and depreciation on the extra investments in stables, milk houses, cooling equipment, and disease-free cattle will continue even though the farmer is no longer required to comply with the health regulations. Moreover, the value of his farm may be seriously affected. The effect of any such plan upon the incomes and welfare of these producers should be considered very carefully before it is put into operation.

One matter which needs to be studied most carefully is the selection of plants and dairies to be eliminated from inspection. Most important of all, before any such plan is inaugurated it should be determined as to whether the over supply of milk is permanent or only temporary. If all the dairies now under inspection are likely to be needed any time within the next three to five years it probably will be unwise to exclude them from inspection now.

Some of these questions will be examined in later articles of this series.

Milk Consumption Correction

On this page in the January 6 issue a statement was made that "The Milk Industry Foundation reports an increase in consumption in New York City of 78 per cent in November as compared to November a year ago."

This was an obvious error, and should have read ".78 per cent". We only wish that the figure were higher, but felt that any increase in consumption was worthy of comment.

More Livestock Sales According to the U. S. Department of Agriculture the principal favorable factors in the dairy outlook are a general rise in commodity prices and the improvement in business. Dairy cattle showed a small increase in numbers in 1938 and 1939. Further increases are in prospect for 1940 and 1941. This means that there will be a good market for livestock.

If you have livestock to sell and want to use this page, write your name and address below, attach your advertising copy and mail to American Agriculturist Livestock Department, Ithaca, New York.

A. J. DAY, R. 4, AUBURN, N. Y.

By J. F. (DOC.) ROBERTS

DAIRY cow herds have been culled out more thoroughly this fall and early winter in the Northeast than for at least the last four or five years. Generally speaking, this has been a most satisfactory operation, because the cows have brought a satisfactory price and the dairyman is now in a good position to receive at least a fair price for his milk during 1940.

If this were the entire picture, it would tend to increase production through more cows in the Northeast; but taking the country as a whole, there will be as many or more cows in production during 1940 than there have been the last few years, and therefore, if the Northeast will not expand, it is in the most satisfactory position of any section of our country, from a dairy standpoint.

Market cows are now bringing from 50c to 75c a cwt. more than they were six weeks or so ago. The interesting feature in regard to this is that cows actually are not costing the packer any more than they were at that time, because after a cow has been put in the barn and given dry feed, its condition and yield to the packer is at least that much greater in value to the packer. This is one reason that you can almost depend upon a higher market on cows during the latter part of December and the first of January, but it is a big question whether they are netting the farmer any more than if he marketed

them off grass earlier in the fall.

* * *

The Golden Fleece is almost a true name for wool this season, with its farm value around 45c a pound. This brings up another interesting problem in regard to shearing your lambs or ewes this winter or spring. The packer has found it impractical to vary prices according to the amount of wool a sheep or lamb carries. In fact, all the little packers sell their pelts by the piece; the purchaser then works that price out on an average. Generally speaking, the packer, therefore, is in a position to give you as much or more for your wool on the sheep's back, as you can get for it shorn. This year, however, if you have sheep or lambs which carry a heavy fleece, they should be shorn before marketing, and if they carry a light fleece, they should not be shorn. In this way, you can work away from average pelt values, and "cash in" when you have better than average fleeces, and the high price of wool this season will more than pay for that operation.

* * *

Summarizing some of the livestock features of 1939, and prospective features for 1940, we find that the upswing in meat production during 1939 was one of the greatest on record, and yet prices for all classes of livestock with the exception of hogs, in the last few months, have been high enough to show profits to feeders and producers. Cattle slaughter was 107% as compared with the 10 years 1923-1932. Calf slaughter was 102% of the average, and sheep 114%. Hog production increased from 76% of the 10 year average in 1937 to 96% in 1939. Leaders in agriculture and packtown say the livestock raising and meat packing industries are entering the New Year in the soundest position of any recent year. Meat output in 1940 will be large, but a broader demand is expected to hold average prices at least up to, and probably above, those of 1939.

Clean Wool is in Demand

By JOHN P. WILLMAN, Cornell University.

CLEAN and neatly tied fleeces of the flock owner, the wool buyer, or the manufacturer. The wool buyer is interested in the condition of the wool, the length of staple, strength of the fiber, and the presence or absence of foreign material. He is interested in obtaining fleeces that will yield a high percentage of clean, strong, uniform wool. If the fleeces contain too much yolk or other foreign material the shrinkage will be too great to allow the buyer to pay a premium price. The buyer cannot pay for something that is of no use to him if he wants to remain in business.

The flock owner or wool producer can improve his wool clip and increase his income by caring for his sheep properly from one shearing time to another.

If the sheep are healthy the fleece will grow throughout the year and a strong fiber is produced. When a sheep becomes ill the fleece may develop a tender spot or a "break". Tender wool is less valuable than normal, sound wool produced by a healthy sheep.

The presence of burdocks or other weed seeds, hay seeds, chaff, grain and other foreign material spoils the appearance of the fleece and also makes it necessary for the manufacturer to remove this before it can be manufactured into woolen fabrics. It may even be necessary to treat the wool with chemicals such as sulfuric acid or aluminum chloride in order to remove vegetable matter. The cost of this additional process known as carbonizing is, in the final analysis, borne largely by the producer.

The most careful and successful shepherds do all they can to produce clean wool. They do not allow the fleeces to become infested with bur-

docks or other objectionable weed seeds. They feed their sheep in such a manner that the grain and other feed does not get in to the fleeces. They prefer the combination hay and grain racks that protect the fleece from such foreign material. In case the racks are unsuitable they may drive their flock out of doors at feeding time if this is possible. If for any reason it is not possible to turn the flock out into the yard, they exercise great care in feeding the hay and grain to prevent the soiling of the fleeces. If molasses is fed it may be mixed with the grain or spread in the bottom of a trough in ribbon form to protect the fleeces. A fence of some sort placed around the straw stack and hay chutes constructed in such a manner as to keep foreign material from getting on the fleeces are practices followed by many flock owners.

The value of many fleeces is lowered because the owner marks his sheep with an undesirable wool branding liquid. Tar is one of the worst kinds of marking liquids. If the wool sorter fails to remove a small particle of tar from the fleece it may cause considerable damage later on in the manufacturing process. It is not necessary to discontinue the use of wool brands for there are available on the market numerous wool branding or marking fluids some of which, it is claimed, are removed from the wool in the scouring process at the mill.

A clip of clean fleece, free from dungy locks and foreign material, properly tied with paper twine should be the goal of every wool producer. The efficient flock owner will not be ashamed of his clip when it goes over the grading table and in the long run will be amply repaid for his efforts to produce clean wool.

Super-Construction for HAY—the Marietta Way!

MARIETTA
CONCRETE SILOS
BUILD TO ENDURE

Marietta's NEW Super-Construction Concrete Stave Silo IS surely America's No. 1 silo—as proved by 1939 record demand. Built sufficiently strong to provide safe, sure, investment.

With every perfection known to modern concrete engineering, it is ESPECIALLY built for HAY—making, also, most perfect Silo for CORN. Our exclusive-type hooping and other perfected features provide TESTED strength for ANY POSSIBLE INSIDE PRESSURE.

Equipped with famous Marietta Redwood hinged doors. And, NOW, our own Metal Dome Roof—built ONLY for Marietta Silos, strictly to their high standards.

For endurance, economy, efficiency and long-time PROFITS—a Marietta IS the unmatched Silo investment. Write TODAY.

MORE BUTTERFAT means MORE PROFIT

» Everyone knows that increased butterfat test means more money but how to get it and maintain milk production is the problem. Hundreds of dairymen have found the answer in CREAMATINE—the feed that has stood the test since 1934—not only increasing and maintaining herd average butterfat production, but also increasing milk flow. » There's no mysterious magic about CREAMATINE. Just sound nutrition built in a formula that really "clicks"—maintaining cows in prime condition—enabling them to produce as close as possible to their inherited ability. » Results?—Records from hundreds of herds like yours prove that dairymen have increased net profits by switching to CREAMATINE—You can do the same. » Write today for FREE manual.

Young Vegetable Growers Organize

The Junior Vegetable Growers Association of America was organized in Chicago recently at a banquet and program given for youthful growers by A & P FOOD STORES. Officers of the new organization, who also won team trophy symbolizing highest junior honors in vegetable judging, are shown receiving congratulations of men guiding their work. Left to right are: Prof. Grant B. Snyder of Massachusetts State College, advisor of group and donor of Snyder Trophy; C. B. Denman, agricultural counsel of food chains; Aubert Johnson, Binghamton, N. Y., president; Butler Dewey, Syracuse, vice-president; Louise Mullen, Stafford, N. Y., member of executive committee, and Earl R. French, national promotional director of Atlantic Commission Company, A & P buying affiliate, and host at banquet.

FARM AND SHARE GARDENING

The turn of the year marks the arrival of new catalogs from nursery houses and growers of farm crop seeds and flower seeds. As usual, this year sees some new offerings and some improvements in the old; and long winter evenings afford an opportunity to become familiar with them and to lay plans prior to the actual garden operations. A supply of penny post cards directed to *American Agriculturist* advertisers will bring these catalogs to you.

WENE STILL HATCHES CHICKS

On December 4 fire damaged the incubator house of the WENE CHICK FARMS at Vineland, N. J.; but Elmer, owner of the Wene Chick Farms, tells us that the damage was less serious than early reports indicated.

"We will proceed as usual," says he. "We are hatching chicks for winter trade and are booking advance orders for spring."

Mr. Wene states that everything is now back to normal.

POWER FOR FRUIT GROWERS

The place of modern power in modern orchards is the subject of a new booklet, just issued by CATERPILLAR TRACTOR CO.

Showing the application of Diesel-powered track-type tractors to every phase of fruit growing, the booklet sets forth cost figures, photographs and owner statements in its 24 pages.

In addition to mechanical features of the tractors, the booklet has sections devoted to spraying, power take-off spraying, cover crop disking, hilly work, irrigation and miscellaneous jobs.

Copies may be obtained by writing to Caterpillar Tractor Co., at Peoria, Illinois, and requesting Form 5792.

NEW BOOK FOR DAIRY FARMERS

A brand new 100-page book, packed with valuable information that will interest every dairyman has just been published by THE BEACON MILLING COMPANY, INC., Cayuga, New York.

This new dairy book, entitled "Profitable Dairy Management," has been prepared by P. E. Newman, Beacon's Dairy Specialist. It discusses Feeding and Management of the Milking Herd, Disease Control, Raising Calves, Test Cow Feeding and Feeding Formulas for using Home Grains. Free copies can be had

by writing to The Beacon Milling Company, Inc., Cayuga, N. Y.

Can you imagine what farming would be like without the help of steel? You will find the booklet "Steel Serves the Farm," published by the AMERICAN IRON AND STEEL INSTITUTE, 350 Fifth Avenue, New York City, an interesting pictorial record of farming from ancient to modern times. It is a long jump from the day when farmers stirred the soil with hand wooden implements, and later with wooden plows, to the present tractor-drawn steel plows. Progress in other lines has been quite as startling.

SHEEP-SHEARING CHAMPION

Roland Burkhart, 27 year old southpaw shearer from Pandora, Ohio, won the Second International Sheep Shearing Contest at the Livestock Exposition at the Chicago Union Stock Yards, December 8. Burkhart won over a field of fourteen contestants representing the states of Minnesota, Arkansas, Pennsylvania, South Dakota, Oklahoma, Illinois, Michigan, Wisconsin, Nebraska, Indiana, Connecti-

cut, Ohio, Iowa and New York. Prize money totaling \$300 was donated by the Chicago Flexible Shaft Company, whose Stewart hand-pieces, combs and cutters were used in the contest.

Speed was only one of six considerations on the judges check sheet, other factors being: absence of cuts on sheep, manner of handling sheep, absence of second cuts in fleece, condition of fleece, appearance of shorn sheep.

NEARBY MARKETS for NEARBY POULTRYMEN

The Measure of a Good Breeding Flock

By L. M. HURD,

Department of Poultry Husbandry, N. Y. S. College of Agriculture.

RIGHT NOW poultry breeders and hatcherymen have just about finished writing their catalogues and the selection of the breeding stock which will produce next year's crop of chicks. A little later you will receive their catalogues with glowing descriptions of the quality of the stock from which the chicks are produced. As you read the advertising from different sources, each claiming that his chicks and stock are the best, it will become increasingly difficult, especially if you are a beginner, to decide who really has the kind of stock you want.

If you look over the sources of baby chicks you will find that they come from either an advanced breeder, a hatcheryman or what I call a flock breeder. My definition of a good flock breeder is one who is interested in maintaining a high level of quality in his poultry flock, but does not care to go through a complicated program of trapnesting and record-keeping to build up his flock. An advanced poultry breeder is one who trapnests and follows a careful plan of breeding which should include progeny testing. The results on such farms vary, but the chances of building flock improvement are best. Both the flock breeder and the advanced breeder usually carry on flock improvement work with their own birds on their own farms, and sell eggs, chicks and breeding stock.

The flock breeder may be one who supplies eggs for a hatchery, or he may produce chicks for sale and for his own use.

A hatcheryman is a producer of chicks who buys eggs for hatching purposes besides those produced on his own farm. In some instances all the chicks produced by a hatcheryman are from purchased eggs. Most hatcherymen are anxious to secure eggs from good quality stock, but the extent of flock improvement varies. Some hatcheries are satisfied to have eggs from good flock breeders without being too particular about the males used, while others carry on advanced breeding operations on the home farm as a means of supplying their flock breeders with good males. Still others buy pedigree males from advanced breeders for their flock breeders and do no advanced breeding.

It is quite evident that the best bred stock will be on the farm of a good advanced breeder who has an up-to-date breeding program based on the progeny test. In many instances, where flock owners or hatcheries buy males regularly from the best breeders and select the females carefully, the chicks may be almost as good as those from the best breeders.

The problem that faces you as a buyer is to know the standard of selection of the hatchery or breeder from whom you buy your chicks.

The first point to be determined is who selects the hens. Does the operator select his own flock, or does he employ some paid culler, service man, or a representative of a State agency to do this work for him? However the work is done, the question is—what is the standard? Many flock owners feel that the flock improvement work is likely to be better done when it is supervised by an official State agency, for certain standards of quality are then required, depending, of course, on the degree of breeding carried on by the operator.

The official State agency in New York State is a poultryman's organization incorporated under the State cooperative law, known as the New York Poultry Improvement Cooperative, Inc. The object of this organization is to assist and encourage poultry improvement work throughout the State through close cooperation with the Poultry Department at Cornell.

The members of the Cooperative have accepted the National Poultry Improvement Plan as the official flock improvement program best adapted to their needs. This Plan has definite breeding requirements for the five different breeding stages. It is administered by the Bureau of Animal Industry of the United States Department of Agriculture in cooperation with the Cooperative and the Poultry Department. This arrangement supplies a double check on the selection work and gives the chick buyer a way of determining the breeding value of a flock.

The second important measure of a good poultry breeding flock is the type of males used. Here again the flock owner may select the males used in his breeding flock himself from his own flock, or he may depend on the hatcheryman to do this, or some State agency. In many cases the flock owner may use pedigree or progeny-tested males from an advanced breeder. This type of male is far superior to the one selected from the flock and the use of such a male is more likely to improve the stock, or help to maintain it at a high level of quality.

If the flock owner is participating in any part of the National Poultry Improvement Plan, the type of male used in the different grades is definitely specified. Of course, progeny-tested males are best.

By progeny-tested males I mean those that come from families in which the offspring of matings have been tested for the qualities which the breeder wishes to establish in his flock.

Next to good breeding the control of pullorum disease is important in the breeding flock. Thousands of chicks are lost annually because breeders have failed to use proper methods to control the disease. Pullorum disease can be entirely eliminated from a breeder's stock by a continued program of blood testing and removing the reactors, and by carrying out certain sanitary precautions.

There are three stages in the control of pullorum disease by blood testing. (Continued on Page 25)

"Keep your eye on that new man. I think he's drinking our number ten oil!"

Your Questions Answered

Vaccinating for Pox

Is it advisable to vaccinate for chicken pox as an insurance measure, even though I have had no trouble with the disease in the past?

This is a difficult question to answer. Certainly vaccination is not easy on the birds, but on the other hand, there is no certainty that you won't have an outbreak. Some poultrymen vaccinate on range at least a month before the pullets are put in laying quarters. On range the fowl pox vaccine is used, which gives immunity for the life of the bird. Where the disease breaks out in the flock after the pullets are put in the houses, it is common practice to vaccinate with pigeon pox vaccine, which gives a temporary immunity, usually long enough to stop the outbreak of the disease. The fowl pox vaccine is not recommended when the birds are in laying houses as it will cause a serious drop in egg production and some mortality.

Before vaccinating, it is well to become familiar with various methods and to get all possible information about the process in order to make no mistakes. Your State College of Agriculture will be glad to give information, and in many localities there are veterinarians who are giving more attention to poultry diseases than they have in past years.

* * *

Thin Shells

Why do the older hens lay so many eggs with shells that are thin, rough, or otherwise defective while the pullets (birds in their first year of laying) on the same ration do not seem to be affected?

This is one of the unsolved problems. It has been recognized for a long time that there is a seasonal decline in egg quality. It is found in laying hens of all ages but is less noticeable in the younger ones. Its cause is not known. It is probably not related to the diet. The term "oviduct fatigue" has been used in this connection. It implies a

tiring of the shell-making organ. This is probably not a correct explanation of the trouble since shell quality may improve later in the season under continued production. Other guesses might be; high temperature, short nights, overly-fat birds due to too heavy feeding of grain.

* * *

Coccidiosis

Is coccidiosis carried on the shells of eggs, so that chicks will be given the disease in the incubator?

No. Recent studies have demonstrated that the life of the infective agent (coccidiosis) does not extend beyond two or three days in the incubator. Fertile eggs that had been infected hatched normally and none of the chicks showed any evidence of the disease.

How can a poultryman distinguish between pullorum and coccidiosis? It seems to me that the symptoms are somewhat similar.

Pullorum attacks chicks when they are just a few days old. Some chicks actually have the disease already in their bodies when they are hatched, but a few diseased chicks may easily spread the trouble to the rest of the flock.

Coccidiosis, on the other hand, attacks the chicks when they are a few weeks old, and if the flock acts dumpy at this age, there is a good chance they have coccidiosis. If you kill one of the sick chicks and find that the two blind guts (ceaca) are swollen and inflamed, the diagnosis is certain. The severity of coccidiosis is directly related to the number of organisms called coccidia which the chicks swallow. That is why it is important to rotate the range so that chicks are not on it more than once every three years. Prevention is important, but when an outbreak occurs, the common treatment is to feed the chicks mash containing 40

lbs. of dried milk to 60 lbs. of mash, at the same time withholding scratch feed. This mash is fed for from three to five days, then returning to the regular ration and repeating the milk mash ration if necessary. Droppings will be very loose, so it is important to change litter frequently.

* * *

Cooking Hen Feed

Is the cooking of poultry feed ever recommended?

The cooking of feed is not ordinarily profitable because it requires so much time and expense. The one exception may be potatoes as it is believed that cooking makes the starch more digestible. Potatoes are high in water, and when they are fed it is important not to overdo it.

* * *

Mold on Oats

How can I prevent mold from growing on sprouted oats?

The use of a formalin will usually handle this. For a tray 2 ft. x 2 ft., soak 6 quarts of oats in 6 quarts of lukewarm water to which has been added one teaspoonful of formalin, which you can buy in any drugstore. After the oats have soaked from 36 to 48 hours, spread them out on the trays at a depth of from 3/4" to 1".

* * *

Green Feed

When is the best time of day to feed green feed?

Usually it is best to feed green feed at noon, although it can be fed in the late afternoon. The thing to avoid is the over-feeding of green feed, which is very important as a tonic and appetite stimulator but which is not high in nutrients. Therefore, if the hens fill up early in the morning their consumption of mash is likely to suffer and so is their production.

* * *

Crop-Bound Hens

Is there any cure for a hen that becomes crop-bound?

Sometimes you can save a hen by making a slit in the skin near the upper part of the crop. Then move the

(Continued on Page 24)

Cautious Optimism (Continued from Page 5)

clearly that any long major war results in a big rise in the world price level.

Experience a Good Teacher

The second thing I have kept in mind is that the present situation differs in many ways from that of 1914. I have already mentioned that we know the effects of war on prices and that we expect a long war. I have also referred to the difference in the building cycle, which is now on the up-trend while in 1914 building was decreasing. There are some other differences. For example, World War No. 1 was preceded by 20 years of slowly rising prices, and government debts were not excessive. The present war was preceded by 10 years of falling or low prices and farm prices are still low. At present government debts are high.

Before the first World War the value of gold, as measured by its buying power, was in approximate adjustment considering the world supply of gold. At the present time the value of gold is abnormally high—that is, prices are abnormally low. Our present world supply of gold is capable of supporting a world price level considerably above what we now have.

How Prices Change

The third thing I have kept in mind is certain principles of price changes which I state as follows:

A long major war always results in a higher price level.

The price level in this country fol-

lows the world price level. When we devalued in 1933, our price level rose instead of declining with world prices. Since that time, it has moved up and down in the same direction, but has remained above the world price level by the approximate amount of devaluation. As long as our monetary system is based on a fixed price for gold, prices in this country will continue to follow the trend of the world price level.

When prices go up, the prices of raw materials, including farm products, rise more rapidly than transportation costs, wages, or the cost of living; and when prices go down, these raw materials go down faster and farther.

Considered as a whole, the farm outlook for 1940 is reasonably optimistic. On the other hand, we are faced with a period of uncertainty. Marked price increases are likely to occur only after Europe has been in war for at least two years. War is always destructive. It takes millions of men away from productive jobs and makes them heavy consumers. After industry reaches maximum production and when the world wants to buy more than the world produces, history shows that prices go up rapidly.

The coming months and years will certainly reward the man who gets and uses every bit of available information and who considers this information carefully in making his plans for the future.

FEED LAYERS
"NOPCO XX"

DURING the winter months, more than ever, you need a Vitamin A & D source you can depend on—to keep your layers working at full speed.

"Nopco XX" Fortified Cod Liver Oil fed regularly at recommended levels is flock protection against possible Vitamin A & D deficiency. No waste—no dangerous variation—GUARANTEED to contain 3000 U.S.P. units of Vitamin A and 400 A.O.A.C. units of Vitamin D per gram.

Don't take chances. Make sure your layers get their full quota of Vitamins A & D by feeding "Nopco XX" daily. High in potency, it goes farther than ordinary oil and saves you money.

Thousands of mill-mixed mashes contain "Nopco XX"—identified in many by the familiar Red Top guarantee tag. Also available from dealers in handy 2 and 5-lb. cans.

**"Nopco XX" is a registered trade-mark of National Oil Products Company

NATIONAL OIL PRODUCTS CO.

Dr. Naylor's

MEDICATED

Teat Dilators

Safe and dependable treatment for Spider Teat, Scab Teats, Cut and Bruised Teats, Obstructions.

Dr. Naylor Dilators are sterilized, medicated and saturated with the antiseptic ointment in which they are packed. They have a deep yielding surface of soft absorbent texture which fits either large or small teats without overstretching or tearing and which carries the medication INTO teat canal to seat of trouble.

The Only Soft Surface Dilators

Whether infection at end of teat, cut or bruised, the resulting condition which closes teat canal making it hard to milk is always the same—INFLAMMATION.

To relieve inflammation in a wound or bruise the treatment most universally used by the veterinary and medical profession is—to apply antiseptics, healing agents and a sterilized, soft absorbent dressing.

Dr. Naylor's Medicated Teat Dilators apply this same treatment for removing inflammation from the milk canal of cows' teats. They carry antiseptics and healing agents into teat canal to combat infection and promote healing.

The dilators themselves are sterilized, soft, absorbent dressings which protect the inflamed area, absorb inflammatory exudates and keep teat canal open in its natural shape while tissues heal.

(Continued from Page 23)
skin to one side and put a slit through the crop so you can remove the material in the crop with a small pair of tweezers. Then take two or three stitches in the crop as well as the outside skin, and the hen will usually recover. However, it appears that hens with low vitality are the ones that usually become crop-bound, so the hen may not be worth the trouble it takes to cure the condition.

Bad to Breathe
Is there any danger in feeding musty feeds to hens?
A hen's digestion will handle some materials that cause trouble in other animals. Nevertheless, it is not advisable to feed musty or moldy feed because there are some molds which get into the hen's respiratory system and cause inflammation which may cause her death.

Bumble Foot
What causes the round, hard lumps on the bottom of a hen's feet?
Apparently this is a bruise, usually caused by jumping from perches onto hard floors. This bruise may develop pus underneath the skin, and is very similar to an abscess or corn. The best remedy, of course, is to provide plenty of litter as a prevention. There is usually a core in these abscesses which can be easily removed with a pair of tweezers and the wound can be disinfected with iodine and the hole filled with carbolated vaseline.

Poultry Shifts
There have been a number of significant shifts in poultry production in the last few years. One shift is toward more fall eggs. Production per hundred hens from March to June during 1928-37 was less than 1/2 per cent greater than for the same months of 1925-34, but production from November to January was 8 per cent higher.
The second trend has been toward breaking and freezing eggs rather than storing them in cases. Average peak holdings of eggs usually occurs on August 1. From 1928 to 1937 there were 668,000 cases less than the average on the same date for 1925-34. Smaller holdings of shell eggs were just about offset by larger holdings of frozen eggs.
The third shift is toward more poultry in northeastern states.

Hillsborough County, N. H., Holds Poultry Meetings
On January 8, 9 and 10 meetings were held at Nashua, Peterborough and New Boston by the County Extension Service for discussions of poultry problems. At each meeting time was devoted to discussion of housing problems by leading growers as follows: at Nashua, by Grant Jasper, Oscar Coombs and Dana Goodwin; at Peterborough, by Edwin Larrabee, Malcom Atherton and J. Prentiss Weston; at New Boston, by W. T. Whittle, Fred Cann and Arthur Grant. Dr. Bradley of the extension service conducted a 45 minute question box at each meeting, and a movie, "A poultry tour of New England" was shown.—*Alfred French.*

One Omelet—One Egg
Joseph Rocco of Hartford, Conn., has been raising chickens for 20 years, but he learned something when one of his eight months old pullets presented him with a bouncing egg measuring 8 1/2 inches in circumference. The egg was 3 1/2 inches long.

"Ten Below and Blowing" (Continued from Page 9)

has been like good bacon—some fat and some lean—and you never get enough of the one extreme or the other to make it really hurt, that there is no monotony in the business and that there are compensations going along with all the incidental discomforts. Any time the weather is bad it's pretty apt to change and get worse. Haying days that are so long and so hot and so exhausting that you can't eat any supper produce the best hay. And days that start on a steel milking stool at ten below and end in the woods at dark are just what you've got to have to bring out the innermost meaning of hot meats. Lobster newburg? No, thank you! Roast duck a la Margery? Throw the darn stuff away! After a morning in the woodlot there is nothing for Elmer and me except spare ribs garnished with smoking mashed potatoes and gravy and the whole business seasoned liberally with the compelling sauce of "ten below and blowing."

The Measure of a Good Breeding Flock (Continued from Page 22)

A flock in the first stage is known as a tested flock. This means that the flock has been tested, usually once a year, and reactors removed. A flock in the second stage is known as pullorum-free or passed flock and is the result of testing several times, or until no reactors are found.

A flock is classed in the third stage, and called clean, when it has been tested twice within six months with no reactors found. Once a flock is clean an annual check-up is desirable to be sure the disease has not been introduced. Whereas testing a part, or all of a flock, once or twice, and removing any reactors is a creditable thing and a step in the right direction, it does not insure that all the reactors have been removed, or that the chicks from that flock will be free of pullorum disease. It is merely a tested flock.

Furthermore, due to the variations in antigen (used in pullorum testing), the methods used in conducting the testing on farms and the accuracy of reading the tests, many poultrykeepers think this work should also be under the supervision of some official State agency.

In New York State and other nearby States, when the testing is done through an official State agency in an approved manner, the flock owner should have an official statement or certificate to show the status of testing on his farm.

"There's a Heap o' Satisfaction!"

Letters from "FULL CELLAR CONTEST" Winners

IN OUR November 25 issue, we offered six cash prizes for the best letters from readers telling how they had stocked their cellars for a good winter living from the farm. When the contest closed, we found ourselves with a large box filled with letters from every state in the Northeast—and such excellent and stimulating letters that the task of picking six winners from among them has been very difficult.

We are so enthusiastic about these letters from farm women that we wish we could print all of them. Nearly every one was packed with good, practical suggestions; with an intelligent appreciation of the opportunity which the farm affords of giving the family an adequate year-round diet, and with determination to make the most of that opportunity.

In the box on this page is the list of those winning prizes or honorable mention. Reprinted below are as many of the winning letters as we could squeeze in. In some cases, we have omitted numbers of cans, etc., to save space:

Color in the Cellar (First Prize Letter)

THIS topic you present, "Stocking the Cellar for a Good Winter Living", awakens warm response in this home, for it seems that the whole summer's activities are centered around this theme. In the first place, the whole family gardens. Father has "big gardens"; the oldest son of 13 years has "middle-sized gardens" as a 4-H project; "middle-sized sister" has the flower gardens to beautify the home; and youngest son of 7 years has "little gardens" from which he also donates to the table and sells some to earn his own pocket money. I take time off in the summer to devote to supervising and assisting in all gardens, preparing the foods for the table, and canning, pickling and preserving the winter's supply.

Thus through the summer months we are all busy in the sun laying up a store of vitamin D for the winter months. Beginning with the succulent green peas and the juicy rhubarb, the vegetables and fruits come on in rapid succession and a constant parade of gay colors in cans seems to march down the cellar stairs to assume an orderly sparkling mosaic of color on the shelves.

Strawberry red is the next one added as these delicious berries are canned for sauce, or crushed and made into syrups for gelatine desserts or sherbets. Jar after jar of jam is added, for this is the children's favorite. Then comes the red of cherries, the light and dark of sour and sweet, in jams and in cans for pies, puddings, and sauce. To me, the next red is the most beautiful of all—raspberry red. These are canned and made into jellies and jams, alone or in combination with other fruits. Currants add their red in juice and jam. Then come the deeper reds of black raspberries and black-

berries and baby beets.

For contrast now appear the greens and yellows—greens of mint jelly, beet tops, spinach, the green Kentucky Wonder bean and lima beans; yellows of bush string beans, summer squash, corn and succotash and pears; deeper orange of baby carrots, peaches canned for sauce, spiced and marmaladed. Apple sauce is added and the crabap-

Dried limas have been shelled. A holiday's hike added butternuts. From neighbors come maple syrup and honey. Roots of our French Endive are packed in boxes of sawdust in the cellar to provide us with our salad greens later in the winter. Chickens have been canned, hogs fattened for the delicious fresh cuts soon to appear on our table and the hams and bacons for later use.

"Full Cellar Contest" Winners

Mrs. Howard Weeks, Afton, N. Y.
Mrs. Ruth Parker, Derry, N. H.

ple lends itself to jelly and to spicing. Shell beans add a brown tone.

Red comes again as the march of the tomatoes begins—down the stairs they go, tomatoes canned whole, tomatoes juiced, tomatoes spiced, tomatoes pickled, tomatoes in chutney, in chili sauce, in Spanish sauce, in conserve, in mincemeat—over 200 qts. in all. Red peppers are canned and made into pepper relish. Elderberries, prunes and grapes add the deeper tones again in cans, juice, jellies and jams.

Mushrooms from the fields are added in the later fall days, and just before the killing frosts come, all garden products are rounded up to make pickles, relishes, and vegetable soup mixtures. Nature crowds and drives at times, but with an average of 2 days each week devoted to canning, we three—electric stove, pressure cooker, and I—manage to keep abreast of the growing things; and when the score is tallied, the grand total of 730 cans, exclusive of jams and jellies, is my reward.

While this kind of storing has been in progress, the late fall days have not found the men of the farm idle in this business of rounding up the winter provisions. Squash, golden pumpkins, carrots, beets, turnips and onions appear by the basketful. Potatoes fill two huge bins. Yellow, red, and green apples add their gay notes. Cabbage is brought in to store and to fill the sauerkraut jar. Popcorn has been husked and dried.

Lard will fill some empty jars. What we cannot eat fresh of a crossbred steer will go into roasts, stews, soup stock, meat balls, chili con carne, individual meat loaves, and roulades. Corned beef, too, will fill a large jar.

I look at our cellar shelves and breathe a sigh of thankfulness that summer brought products, time and strength thus to provide for the winter months; for,

There's a heap o' satisfaction
In the food you've raised yourself,
There's a heap o' glowing beauty
In the canned food on the shelf.

—Mrs. Edmund H. Gleason, Groton, N. Y., R. 2.

Planned a "Protective" Diet

(Second Prize Letter)

MY FAMILY consists of three adults and three children. I looked up some data on the canning requirements of a "protective" diet, and made plans accordingly. I found that each member of the family should have 20 quarts of fruit, 30 of vegetables, and 25 of tomatoes.

I have 131 quarts of fruit and 30 of fruit juices. We raise more plums and pears than we can use, so I used all the small ones for juice. Mixed with some tart juice, as grapefruit, these make an inexpensive and delicious breakfast drink. I exchanged some of our surplus apples for peaches, and with the berries, grapes, currants, citron, cran-

berries, etc., I have a good variety. We plan to use 10 bushels of apples this winter.

Corn, succotash, shell beans, peas, green beans, baby beets, and many greens, including 20 quarts of "fiddle-heads", made a total of 214 quarts of vegetables. We have stored in sand a bushel each of turnips, beets, and carrots. We have three kinds of dry beans, and I can any left-over baked beans in winter to save on summer fuel. I will can some squash and pumpkin before the ones we have stored are "gone by". I have 110 quarts of tomatoes in juice, soup, paste, and cold packed. Plenty of potatoes are stored.

Having part of a venison to make use of, I canned 7 quarts of the meat and made 14 quarts of mincemeat. I also canned 10 quarts of veal and 5 quarts of fish. When our pig is butchered, there will be smoked meats, salt pork, leaf lard, and canned and fresh meat.

I made different kinds of jelly, jams, marmalades, totaling 16 quarts, and also 45 quarts of pickles. Some maple syrup on hand from last year lends variety to our meals.

I have made a sort of skeleton menu for the winter, dividing my amounts of canned goods over the number of weeks they will each be needed, and I hope in this way to produce interesting and varied, as well as balanced, meals. Our family should have a good "protective" diet with very little outlay of cash this winter.

—Mrs. Erland W. Curtis, Richmond, Maine, R. 2.

"Ought to Keep the Wolf From the Door!"

(Third Prize Letter)

LET US take a little trip to the cellar and see how we are prepared for winter. At the foot of the stairs on the front side are a row of stone crocks. The largest contains about 50 lbs. of salt pork; and the next one is nearly filled with pigs legs and fat and lean pieces of meat in brine to use in boiled dinners. Next comes a crock holding 20 doz. eggs nicely preserved in water glass, and beside it is a crock containing 30 lbs. of fine yellow butter resting in a brine bath. This was made in June and early July when we had an over supply and the price was low.

Next we come to a 3 gal. firkin of salted fish, the result of a deep sea fishing trip. Lifting the cover of the next jar we see 5 gals. of small cucumber pickles, and alongside it are a three gal. crock of sliced tomatoes and onions made into sweet pickle, a two gal. crock of piccalilli, and a wooden firkin holding 18 lbs. of lard. Between these jars and the chimney is a rack of poles fastened to uprights with spikes driven through them, on which are hung 42 cabbages with stalks left on. Suspended from the floor timbers is a bag of onions and a bunch of dried sage. Across one end of the cellar are bins for apples—20 bushels of 11 different varieties.

On the third side of the cellar are bins holding 16 bu. of potatoes, 1 bu. each of carrots and beets, 2 bu. turnips, a box of sand containing ½ bu. parsnips, and 6 bunches of celery rooted in sand.

Now come the vegetables in glass jars—dandelion greens, spinach, swiss chard, kale, asparagus, string beans, peas, cut corn, corn ears, shelled beans, succotash, cauliflower, tomatoes, lima beans. Beside these in a cupboard for meats and drinks are 15 pints of chicken, 11 of roast pork, 5 of turkey, 9 of venison, 21 of boiled beef, 7 of roast lamb, and 20 qts. of vegetable beef soup. For drinks we have 20 qts. of sweet cider, 15 pts. of grape juice, and 7 pts. of raspberry juice.

Shelves for pickles hold tomato catsup, jars of ground horseradish, mustard mixed pickles, sweet ripe cucum-

AUNT JANET'S Favorite Recipe

FORTUNATELY cabbage is a valuable food, especially if not overcooked. It may be made more interesting by combining it with other valuable foodstuffs in a casserole for the main dish:

Baked Cabbage and Tomatoes with Cheese

3 cups boiled cabbage	1 cup bread crumbs
1½ cups seasoned stewed tomatoes	1 cup ground cheese
	1 tablespoon butter
Salt and pepper to taste	

Butter a baking dish, put in a layer of tomato and then one of cabbage. Sprinkle each layer with cheese and then with bread crumbs. Continue in this way until all has been used, and make the top layer of bread crumbs. Dot the top with bits of butter and bake it in a slow oven for about 30 minutes.

servative and flattering to almost any figure. The variety of neck and sleeve treatments make it possible to please anyone's fancy. Sizes 14 to 48. Size 36 requires 4¼ yards of 39-inch material.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

Today in Aunt Janet's Garden

Give Tools Beauty Treatment

IN THAT last rush of getting everything tucked away for winter, it is not unusual for garden tools to be overlooked, yet real damage occurs if they are left without protection.

Ease Winter Out

DO NOT put off getting those early spring clothes in shape until they are actually needed. Besides, the end of winter always calls for a bit of freshness underneath the heavy winter coat. The beautiful new lightweight woollens can be worn well into spring.

PATTERN NO. 3035 for jumper skirt ensemble is ideal for girls and small women, being both stylish and practical. The three pieces, jacket, blouse and skirt go well together or are good companions for other articles in the wardrobe. Sizes 11 to 19 years. Size 16 requires 7/8 yard of 54-inch material for bolero; 1½ yards 39-inch for blouse; 2 yards 54-inch material for jumper skirt.

DRESS PATTERN NO. 3099 is top-notch for an all-day dress, smart, con-

One way of preventing trouble is to coat all exposed metal parts with a mixture of crankcase oil and kerosene in equal proportions. If crankcase oil is lacking, it is very easy to wash or rub off the soil and after drying the tools coat them with some unsalted fat or heavy oil. If one has the time, painting of wooden handles helps to preserve them.

Lawn mowers, rollers and similar implements last longer if they are cleaned carefully and protected either by oil or paint.

In addition to the tool checkup, stored roots and bulbs need to be looked over to see if they are keeping well. Any sign of rot is a danger sign; so is undue shrivelling. Most tubers and bulbs need to be stored in soil or peat-moss, which should be damp but not wet. Too much moisture causes decay. If this has started, prevent further trouble by cutting away the decayed parts and dusting the cut with dusting sulphur or some of the new formaldehyde dusts; then store in less moist surroundings.

In our experience of storing gladiolus corms, potatoes, carrots, etc., our cellar proved too warm, although the furnace room is separated from the rest of the cellar. So we made insulated bins in the garage and, except in very bitter weather, we find that roots keep in better condition there than in the cellar. Carrots, beets and parsnips are stored in bushel baskets of sand, while glad corms and other roots are either in trays or lightly covered with sand or peatmoss. In extreme weather, extra covering can be put over the trays, or they may be brought into the cellar for a brief period. The bushel baskets of sand are covered with extra newspapers and bags, and extra panels are "buttoned" in position in front of the regular bin doors to shut out the cold.

NOW-MAKE BREAD WITH MACA

New Form of Fast, Dry Yeast

MACA is a new form of yeast for home baking—new in name and form and in its combination of advantages. Announced in a restricted district less than two years ago, MACA demand has grown by figurative leaps and bounds. And this, mind you, with practically no sales effort or drive behind it.

What does this indicate? To us it seems an extraordinary endorsement of the product itself, mute testimony that housewives like it! Well, why do they like it so much? These may be the reasons:

(1) MACA is a dry yeast, yet it works fast. (2) It is keepable simply on the pantry shelf. That is, it retains its ferment quality for days or even weeks without refrigeration.

Women have written us that "MACA gave me my biggest thrill in 14 years baking experience"; that "MACA has the good points of both dry yeast and wet or 'fresh' yeast". Enthusiastic, genuine and honest expressions—maybe you'll feel the same way once you try MACA.

No tricks to work; no magic to perform; *nothing new to learn*. Just follow your favorite straight dough method and you should have successful baking results.

Try MACA YEAST today. You can get it at most grocers' or your store will gladly order it for you. If you want to try MACA before you buy, send the coupon below.

Splendid Cough Remedy Easily Mixed at Home

Needs No Cooking. Big Saving.

To get quick and satisfying relief from coughs due to colds, mix your own remedy at home. Once tried, you'll never be without it, and it's so simple and easy.

First, make a syrup by stirring 2 cups granulated sugar and one cup of water a few moments, until dissolved. A child could do it. No cooking needed.

Then get 2½ ounces of Pinex from any druggist. This is a compound containing Norway Pine and palatable guaiaicol, in concentrated form, well-known for its prompt action on throat and bronchial membranes.

Put the Pinex into a pint bottle, and add your syrup. Thus you make a full pint of really splendid medicine and you get about four times as much for your money. It never spoils, and children love its pleasant taste.

And for quick, blessed relief, it is amazing. You can feel it take hold in a way that means business. It loosens the phlegm, soothes the irritated membranes, and eases the soreness. Thus it makes breathing easy, and lets you get restful sleep. Just try it, and if not pleased, your money will be refunded.

SHEEP and DOGS

EDITOR'S NOTE: In reading Mr. Stephens' interesting account of sheep-killing dogs, remember it was written over forty years ago. Since that time laws have doubtless been changed in some states. Therefore, this story should not be considered as necessarily applying to the situation today.

SOME years ago, when so much was said about the "abandoned farms" of New England, I formed with another young man what we fondly believed to be a rather fine plan for establishing ourselves comfortably. We were then salesmen in one of the great stores in Boston. We were not altogether happy in our occupation, for we liked out-of-door life. As we had been prudent enough to save a little money, we thought we might look about, buy some old farm, stock it with sheep, and live leisurely and healthfully off our mutton and by the sale of our wool.

We talked this scheme over throughout one entire winter and spring, and spent our two weeks of summer vacation driving through the northerly counties of Vermont, New Hampshire and Maine, in quest of old farm property. At last we found in Maine what suited us pretty well—four run-out, upland adjoining homesteads of about a hundred acres each; and we were able to purchase all for twenty-eight hundred dollars.

As there was much similar farm property near by, we could, if our experiment proved a success, add to our territory and increase our stock. At the outset, and during the succeeding autumn and winter, we purchased one hundred and sixty sheep, which we divided into four flocks.

On one of the four farms was a fairly comfortable old house; and in the spring we went there to live, having engaged as housekeeper an elderly but very energetic woman whom we called Aunt Deborah.

Our neighbors were seven or eight families, none wholly prosperous, some slovenly and shiftless; and they all kept dogs.

Within a radius of two miles of our sheep pasture there were, as we soon had occasion to reckon, seventeen or eighteen dogs, including four hounds, and all exceedingly dear to their owners. There were "otter dogs" and "deer dogs" and "partridge dogs", and a great many very valuable "woodchuck dogs". And many of these precious animals were fond of making nocturnal raids into our sheep pasture.

In the first spring after we had taken up our sheep farm we had a hundred and forty lambs when the sheep were turned out to pasture on the third day of May. Four days later six lambs and two sheep were missing. Bits of wool, bones and the remains of one sheep, all found in secluded places, showed that some animal had killed and eaten them.

As bears or wildcats were not numerous in that locality, we felt morally certain that dogs had done the mischief, and we particularly suspected two dogs kept by a neighbor named McFadden, living a mile distant. One was a bulldog, the other a large mongrel cur, one of the highly esteemed woodchuck dogs.

My partner and fellow shepherd, Ward, carried two buffalo-skins to the pasture, hid himself in a clump of low hemlocks, and watched during the following night with a gun, resolved to shoot any dog that came near the remains of the sheep. He saw none, although a lamb was killed during the night in another part of the pasture. When dogs go to sheep-killing they seem often to revert to the cunning and slyness of their wild ancestry.

By C. A. STEPHENS

In all these vexations we had a warm sympathizer in "Aunt Deb." She hated dogs on general principles, and for the special reason that on a number of nights when the bulkhead door chanced to be left open, some animal stole into the cellar and raided her pans of doughnuts, custard pies and other eatables.

"Now, boys, just you let me try my hand on those dogs," she said, at the breakfast table. "I'll fix 'em for you."

Addison's Son

William H. Sanders of Bedford Hills, N. Y., called our attention to a book review in the December 24 issue of the New York Herald-Tribune. The book is "Underground Minerals, Metals and Gems." It is written by A. Hyatt Verrill who, so the report says, is the son of the late Professor Addison E. Verrill of Yale University.

Mr. Sanders tells us that Professor Addison Verrill is the identical Addison so often referred to in C. A. Stephens' stories.

When it comes night you just go to bed and sleep. I'll answer for the dogs."

"Go ahead, Aunt Deb!" we said. "You shall have a lamb for every dog you dispose of."

Toward night we saw her pounding something in an old mortar; and just at dusk she went alone into the sheep pasture. She had, although we did not know it at the time, pounded up two glass bottles, and with the powder she "doctored" the remains of the sheep and the lamb last killed. The next day we discovered that the carcass of the sheep had been taken away; and on

the following day tidings came that McFadden's two suspected dogs had expired, and were supposed to have been poisoned.

Now if we had been wise we should have remained quiet. A mere smattering of law, which was all we possessed, is dangerous knowledge for a man to act on, and is pretty sure to get him into trouble. We knew that we had a right to kill a dog attacking our flock, and that we could legally collect double damages from the dog's owner; and as we thought we had good evidence that these two dogs were the transgressors, we went immediately to McFadden and demanded damages for the seven lambs and two sheep killed.

McFadden threatened us with his ax, and his wife, declaring that she would scald us, put the kettle on a hot fire. They were very angry over the loss of the two dogs, particularly of the woodchuck dog, which Mrs. McFadden feelingly asserted had kept the family in fresh meat all summer.

Instead of obtaining damages from McFadden for our sheep and lambs, he sued us for poisoning his two dogs; and unfortunately for us, we had supplied him with all the evidence he needed. When at last the case came to trial we found the law far different from what we had supposed it to be. The following points came out:

First, the fact that these two dogs came up and ate of the dead sheep did not prove that they had killed the sheep.

Second, as Aunt Deb was our hired housekeeper, we were as much responsible for her act as if we had done the deed ourselves.

Third, although we had a legal right to kill dogs molesting our sheep, we had no right to poison them; and the proved fact of our having "laid out poison" for them subjected us to a fine of fifty dollars, and also to payment for the dogs, which were held to be worth five dollars each.

Fourth, glass, although not poison in its ordinary form, was held to be poison to all intents and purposes when pounded to a powder and put into meat for dogs to eat.

Finally, as we went home from the trial, the victorious McFadden drove behind us and reviled us.

Our own mortification was slight,

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

After the Ice Storm

O flame-girt angel with the stern, sad eyes,
Guarding so patiently the gates of bliss,
Rest you! I do not want your paradise
While I have earth upon such nights
as this.
These trees of jet and diamond never grew
In Eden's groves; they need a frostier air,
This ebon, star-flecked sky, the frozen dew
Of ice a-glitter on dark boughs and bare.
They need yon wintry moon, remote and cold,
To etch their crystal radiance on the black;
A wrack of drifting cloud above the world;
One lost star flashing down its silver track—
Angel, you watch the fruit of life in vain.
My North has trees that, dead, shall bloom again!

—Dorothy A. Hurlbutt,
Hanover, N. H.

however, compared with that of Aunt Deb, when the results of her dog physic were made known to her. I really thought for a time that she would fall sick of her indignation, and we had some difficulty in preventing her from visiting the McFaddens in person. Aunt Deb's exploit cost us exactly one hundred dollars, in fines, price of dogs and costs, but our lambs were not molested again that season. That was our one crumb of comfort, for there remained not the slightest doubt that the two poisoned dogs were the offenders.

In the next summer the sheep of another neighbor, named Fotherly, came into our field, where potatoes and peas were planted. They partook heartily of the green peas, and not only of them, but of Paris green, which had been sprinkled on the potatoes to kill the potato bugs. Two or three of the sheep died; and mindful of the McFadden triumph, this ill-disposed neighbor prosecuted us promptly for exposing poison, and declared that he would "land" us in Thomaston jail for it.

But this case went against Neighbor Fotherly. In addition to the costs, he had to settle with us for the peas at our own figures, and also to pay damages for a malicious prosecution, because of his threatening publicly before the trial what he would do with us.

He suffered to the amount of a hundred and fifty dollars, for in this case it was held that the poison was lawfully used. So it is a very nice question when a man may lawfully expose poison. If those sheep had come into the field through the least neglect on our part, the result might have been more agreeable to Fotherly.

The year following our sad legal contest with McFadden, lambs disappeared mysteriously week after week from our pasture. At first we suspected human thieves, as no trace of wool or bones could be discovered; but a boy whom we had employed to watch reported that a large brown and white foxhound had leaped the wall, seized a lamb and jumped out with it, all in

The Song of the Lazy Farmer

MY NEIGHBOR'S havin'

quite a pain, because we lack so much for rain, he says the air's so all-fired dry that he can't spit, or even try. The ground has all dried up to dust, and so he's gittin' pretty fussed; his well has almost given out, there ain't no water in the spout, he works but can't git his shirt wet, because it's too blamed dry to sweat. He says the climate's changed, there ain't no answer to all his complaint, because the rain clouds fail to come, the weather man he ain't to hum, or mebbe he has gone to sleep; a feller cannot even weep, there ain't no moisture anywhere, and neighbor says it isn't fair. He says that this fair land is bound to just dry up until the ground is all a desert, bleak and bare, with no crops growin' anywhere.

I hate to see my neighbor sad, but I don't feel so very bad, because I've seen it dry before, but always it has rained some more. There always comes another day when it will rain upon our hay, first thing we know we'll have a flood and start to kickin' cause the mud has got so deep that we can't git to town to gossip and to sit. The weather is a funny thing, we cannot do a bit to bring the rain, but it will come and then we'll wish that it was dry again. If it is cold or if it's hot, 'twill change again as like as not. We have it dry and have it wet, and always will again, I'll bet; the weather's never been just right and so we blame it for our plight, but still we git along some how, and mebbe if we plant and plow and do our part we'll git along in spite of weather that's all wrong.

less than half a minute. He identified the hound as the property of one Clucker, a poor neighbor living half a mile away.

The hound was the mother of five puppies, and could obtain nothing, or next to nothing, to eat at home. It was doubtless a case of dire necessity on her part; and our hired boy, who frequently visited the family, affirmed that the Cluckers shared the lambs which the hound captured.

My partner posted himself behind the pasture fence with a gun loaded with buckshot, but on the following afternoon the hound entered the pasture and caught a lamb before Ward could get near enough to shoot. Jumping the wall, the hound ran for home, half-dragging, half-carrying the struggling lamb.

Ward gave chase, but was unable to come near the hound until it gained its master's dooryard, where it turned and faced him, growling savagely. Ward fired and the hound fell, just as its master opened the door and raised an expostulating hand to prevent the shot.

It is evident that in the excitement of the moment my partner had made a rather free use of his gun, but he had in mind the words of the law: "Any person may lawfully kill him whenever and wherever found."

Clucker, the owner of the dog, incited by McFadden and Fotherly, took legal advice and began suit to recover damages for the unlawful killing of his foxhound, which he professed to value at fifty dollars.

A most stormy trial followed; and in the decision Ward was held to be in fault in shooting the hound after its owner had raised his hand to forbid it; and there was a grave doubt expressed as to whether he had not laid

EMPTY HOUSE

By EMILY ESTEY.

I often think a little house must ache To see the tenants it has loved forsake Its open wooden arms and move away To make some other little house be gay.

Each small deserted house must wonder why Its services have failed to satisfy; Wherein it has lost the guardian's role?

And why, in moving, did they take its soul?

himself liable for unlawfully entering Clucker's premises with a gun, in pursuit of the hound.

In the end we paid twenty-five dollars for the foxhound; but by a rather curious legal offset, damages to about that amount were allowed us for the lambs killed by the hound. The costs of the suit fell on us. The court shrewdly looked out for itself as to that, Clucker being utterly impecunious.

The conclusion which we arrived at, after the above litigation, is that peremptory as the law seems to be against dogs, the killing of one is liable to prove a costly bit of vengeance.

If a neighbor's dog throttles our lambs, we deem it far safer to shoot him on our own premises than off them, and positively unsafe to shoot him on his master's premises. The safest method of all is to catch him in a trap at the scene of his depredations, then summon his master, and at the same time invite one or more disinterested parties to see and hear what takes place.

"There's a Heap o' Satisfaction!"

(Continued from Page 26)

ber pickle, sweet mixed pickles, pickled crab apples and pickled pears. Beside the chimney are shelves for jelly and jam. Resting on these are jars of grape jelly, apple jelly, currant jelly, crab apple jelly, and plum jelly; also, 4 pts. of boiled cider. Of jam there are 8 pts. of raspberry and 4 of blackberry.

On the canned fruit shelves are plum sauce, raspberries, blueberries, blackberries, cherries, strawberries, currants, gooseberries, pears, sweet apples cooked in cider, sweet apples fixed like pears and flavored with vanilla, green pear tomatoes with lemon, rhubarb; also, 10 qts. maple syrup, 15 qts. of cranberries put up in cold water, and 40 quarts of mincemeat.

On another shelf are a 10-lb. plain cheese and the same of sage cheese stored in cheese boxes secured from the grocer. Hanging from the floor timbers are a 15 pound smoked ham and 3

slabs of bacon, and on the floor a 5-gal. jug of vinegar.

For our family of three, it seems as if we are fairly well supplied, as we have 20 squashes and 25 pumpkins in the chamber; 25 lbs. of dried sour apples and 10 lbs. of dried sweet apples (to use in fruit cake), and 10 lb. dried pumpkin in sugar bags in the cellar way. We also have 23 quarts of soldier beans and ½ bu. of pea beans for baked beans. When it comes settled cold weather, we have a pig and a yearling bull to kill for fresh meat. It would seem that this supply ought to keep the wolf from the door for a while!

—Nora F. Allen, Strong, Maine.

Has Frozen Foods Locker

(Fourth Prize Letter)

IN MY cellar I have the makings of many delicious and well balanced meals to provide for my family of three. I have 20 qts. of chicken, which I put up when we disposed of our old hens. I also have chicken stock for soup or consomme, and minced chicken for creamed and scalloped dishes. Canned pork, bacon and pickled heart and tongue will give variety. Canned beef is as good as fresh beef, and so much cheaper. A can of beef stock makes an appetizing kettle of soup with the addition of potatoes, carrots, onions and seasonings. A jar of salt pork furnishes the basis of many good meals.

To furnish the needed minerals and vitamins, I have a good supply of canned vegetables—string beans, tomatoes, corn, lima beans, greens and beets. I have 40 quarts of tomato juice which we enjoy for breakfast, with fruit in between times. Canned red raspberries, blackberries, purple raspberries, prunes, cherries, peaches and pears give variety for sauce or other desserts. I canned some pears with orange and lemon slices—also colored some red and green

for holiday salads.

To add zest to our meals, I have red currant jelly, quince jelly, strawberry jam, strawberry and pineapple jam, currant and red raspberry jam, peach marmalade, peach butter, prune preserves, bread and butter pickles, dill pickles with garlic, chili sauce and catsup. I have some fig filling which is nice for either cake or filled cookies; and I have grape juice, a refreshing drink for any occasion.

Of course we have potatoes, carrots, cabbage, squash and onions in the cellar. We have several bushels of apples—Greenings, Northern Spy, Baldwin and Tolman Sweet. Apple pie and apple sauce are two favorites at our house. I always make mincemeat at butchering time.

In addition to our cellar supplies, we are fortunate in living within 2 miles of a cold storage where there is a locker room for frozen foods. We rent a locker and keep it full most of the time. In it we now have 25 quarts of strawberries picked from our garden. These are delicious served over prepared cereal, or as a company dessert with ice cream, or for winter shortcakes. We also have in the locker some fresh sliced peaches for shortcake or sauce; sour cherries which make a pie which cannot be distinguished from one made with fresh picked cherries; also, a half bushel of asparagus and a few dozen ears of sweet corn which will taste fine this winter. In addition we have sausage and spare ribs from last year. When we butcher later this month, we will add at least 30 pounds of sausage, sliced fresh and smoked ham, pork roast, and spare rib.

—Mrs. Glenn Broadwell, Waterport, New York.

IF YOUR NOSE "CLOSES UP" TIGHT AT NIGHT

Hinders Breathing—Spoils Sleep

DOES YOUR NOSE fill up at night and spoil sleep? Here's a tip. Put a few drops of Vicks Va-tro-nol up each nostril at bedtime. Then notice how it clears air passages, promotes freer breathing and so helps to pave the way for refreshing sleep!

THIS TREATMENT is so helpful because Va-tro-nol is expressly designed to bring relief in the nose and upper throat where transient congestion hinders breathing. Try Vicks Va-tro-nol tonight!

KILL RATS WITHOUT POISON

YOUR MONEY BACK IF RATS DON'T DIE

Look better, Feel better **DRINK FRESH MILK**

DR. VIRGINIA M. DAVIES.

She Loves the Soil

By H. L. COSLINE

BACK IN 1886 at a time when the business ability of women was somewhat in doubt, at least in the minds of the male part of the population, and at a time when public sentiment leaned to the idea that a woman's place was in the home, a young woman graduated from college with a degree of Doctor of Medicine. After some experience in hospitals, she tacked up her sign and waited for her first patient.

But this is not a doctor's story. It is an account of a woman who loved the land enough to buy a farm and who, though lacking practical experience at the start, made it yield bountifully. As a girl this woman, Dr. Virginia M. Davies, had two ambitions—one to be a doctor and the other to own and operate a farm. For six years after patients began coming in increasing numbers, she practiced medicine. Then in 1892 her second ambition was achieved through the purchase of 35½ acres at Congers, Rockland County, New York.

Though continuing to carry on her practice as a country doctor, Mrs. Davies undertook to operate the farm, specializing in strawberries, but also raising some garden produce and keeping two cows, selling the milk locally. Her husband, Mr. Davies, was an artist interested in rural life, but with no experience in farming, so Dr. Davies found herself with plenty to do. Says she:

"At the start we raised forage and grain crops, some vegetables and some small fruits. For four or five years we had from 20 to 30 crates of strawberries each day during the season, and we lengthened out the season to six weeks by having a number of varieties. I sold them to local stores and to wholesalers, and my berries always topped the market. I learned to do, and did do, most farm work except plowing, cultivating and heavy team work; and as they grew, my sons learned with me. They had their daily chores, greatly to the good of their bodies and souls."

Later additional land was purchased, and gradually apple trees were set, until at the present time they are the chief source of income.

The two boys, Niles and Arthur, spent four years in the State College of Agriculture at Cornell. Niles now operates an adjoining fruit farm.

Arthur spent several years as county agricultural agent in Lewis and Herkimer counties, but believing as does his mother that the farm is the best place for raising children, he came back to operate the home farm. Now there are 70 acres of orchards, and the crop this year is expected to total 16,000 bushels. Chief varieties are McIntosh, Rome Beauty, Delicious and Cortland. Arthur is a member of the New York State

Fruit Testing Association and has a number of producing trees of the new varieties, including Milton, Kendall, Medina and Orleans. A cold storage house was built and expanded until now it holds 10,000 bushels. This allows the crop to be marketed gradually during the season.

"I began to spray in 1894," says Dr. Davies, "using a barrel pump. At that time three applications of spray would control most of our pests, both disease and insects. Gradually as time went on we had to spray oftener, until now it is necessary to spray at least once every ten days during the early part of the growing season. Fortunately we have been able to control diseases and insects without applying enough spray to make spray residue a serious problem. Before we began to spray at all, most varieties would not keep beyond January 1. As our spray program became more effective, we found that we could keep most varieties in common storage until June. Now, of course, with our modern cold storage, we are able to keep them in a much better condition."

Some years ago Dr. Davies turned over the active management of the farm to her two boys, but in no sense has she retired to an inactive life. Not only does she know what is going on right out in the orchard, but she still continues to practice medicine.

"At 76 years of age," says she, "I claim no farm as my own, although I remain a most interested spectator and frequent worker. As a result of my turning away from my city practice 46 years ago, there are established in the country, and living in old houses equipped with modern conveniences, two families and five grandchildren with the best of opportunities; about 100 acres planted to orchards; and a local reputation for the finest quality of farm products."

Personal Problems

Outwit Her

I am up against about the queerest situation I ever heard of and I wonder what you can tell me to do about it.

A new boy recently came to our high school and he seemed to take a fancy to me. I like him a lot, too. But another girl is after him . . . and I believe she's going to get him through sheer perseverance. Here's about how it goes:

Al (I'll call him that for convenience) may ask me to walk down town with him for a soda after school. When we come out of the building, Alice (the other girl) is waiting, attaches herself to Al and goes down with us. We get in the booth, have our sodas . . . and she sits . . . and sits . . . and shows no inclination to go home, whatsoever. The woman with whom I board has supper at six o'clock and she doesn't like it if I'm not on time. So, I say I have to go. Al gets up to walk home with me . . . and Alice comes with him; then, of course, he has to walk on home with her.

We go to basketball games . . . and Alice comes and sits with us and plans the evening after the game. We had a weiner roast one night and by sheer luck, Al and I happened to get away by ourselves and walked up to the top of a hill and sat down to watch the moon rise. In a few moments, here came Alice, on pretext that she wanted to borrow Al's knife. She stayed for the evening, as you may have guessed! And actually maneuvered Al to take her home after they'd dropped me.

I know you'll think that Al could get rid of her if he wanted to, but he's kind-hearted and gentlemanly and I know, doesn't want to hurt her feelings. He plots and plans with me to escape her . . . but she outsmarts both of us. What in the world can you do in a case like that?—Puzzled.

If you are sure that it's you that Al prefers . . . and that he's really annoyed with Alice's persistence, then I advise you to go after her scalp. A girl of her type can be one of the most exasperating persons on earth . . . and it is a job to outwit them.

I can't tell you exactly how to do it

IT IS EASIER to discuss a personal problem with an absolute stranger than it is with a friend, unless that friend be unusually intimate. If you have a problem, write to Lucile, Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y. If you wish, your letter will be held entirely confidential, and Lucile will send you a personal reply by mail.

. . . but I'm betting on your woman's intuition, diplomacy . . . and Al's help (he needn't be too kind-hearted or polite in this case) to do the job and put Alice in her place. The odds are all in your favor . . . don't give up the ship.

You Must Conquer

I have been married eleven years and have a daughter who is eight. Shortly after I was married I found out that my husband did not love me . . . he had been at outs with the girl he had gone with for years, and married me for spite. However, I was deeply in love with him, and tried to make the best of things. He has stuck with me all these years, but has always been extremely friendly with other young women.

For awhile, when I was in love with him, I was not so jealous; lately I have not been in love with him as I used to be and his attentions to other women make me furiously jealous. This doesn't make sense, does it? Can you tell me why I feel this way, and what I can do to overcome it?—Jealous Wife.

Just why your feelings and reactions should have changed I cannot say. The conditions are somewhat unusual. But on the subject of curing yourself of jealousy, I shall try to advise you.

First, realize that you have a tough enemy to lick . . . there is nothing worse than the feeling of jealousy, especially in men-women relationships. But . . .

BLACKOUTS

By ELIZABETH WEBSTER.

Though all the world is plunged in grief,
Help us, O Lord, and heal our unbelief.

If days are dark and sadness lies
Like a great pall o'er-clouding sunny skies,

Give us the faith to trust and know
That through Thy wisdom better things shall grow;

That as the lily blossoms through the mire,
So through this testing time our heart's desire

Shall find fruition, and Thy plan
Shall reach its consummation in the brotherhood of man.

equally important, realize that jealousy and giving way to fits of it, does more harm to you than to anyone else. Consuming jealousy can destroy reason, health, good looks, sweetness, character . . . it can almost destroy us entirely. And it's a disease that there's no use calling the doctor for. The cure lies within yourself, alone.

Tell yourself that no situation is worth what a jealous spell can take out of you. Interest yourself in other things, so you will not have time to brood over real or imagined wrongs. Don't let on to your husband that you even notice his actions. Pretty soon . . . maybe you won't!

* * *

You Were First Choice

Who should leave first, when calling on a young lady . . . the boy who has been invited to call, or the one who just happens to drop in?

A few nights ago I was calling on a girl at her invitation and another friend of hers dropped in. He said he was just passing by and stopped; I think maybe she had invited him, too, but she denies it. Anyway, I stayed and he stayed . . . finally, as it was almost midnight and he showed no signs of leaving, I took my departure. I don't know how long after that he stayed. Now, was it my place to go first, or his?—Undecided.

* * *

He should not have stayed in the first place, when he dropped in and found that the young lady was entertaining invited company. If he did stay, it should have been for only a few moments. Undoubtedly, you had the inside track, but one can't stay up all night, trying to out-sit the other fellow, can he?

* * *

How to Fly

I would like to be an air hostess, or stewardess. Are there any special educational requirements?—Eager to Fly.

Air hostesses must, according to regulations of air lines, be trained nurses, and there are weight and height requirements which are adhered to quite rigidly. In order to enter nurse's training, in most states, you must be a high school graduate. If you write direct to the air line offices, you can get more definite information. Contact your local travel agent for the head office address nearest you.

"All right, he called Daddy a flea-bitten fathead and a lemon-faced loon. But what was the fight about?"

Famous Half Dome in Yosemite National Park, to be visited by our American Agriculturist party on March 5 and 6.

Make Your Reservation *Now!*

*For American Agriculturist's Wonderland Tour,
Feb. 24-March 18*

IF YOU haven't already written to us for a copy of the illustrated itinerary of our western tour, we urge you to do it today. It gives complete details of where we will go, what we will do, and exactly how much it costs from various points of departure. It is filled with pictures of some of the wonderful places we will visit; also, it contains a picture of the *American Agriculturist* folks who went on our last tour. You have only to look at this group to see what fine people they are, and what a good time they were having on the trip. Right in the foreground of the picture is our genial tour manager, Mr. V. L. BeDell, who has gone on every one of our trips for the past several years. Mr. BeDell is a past-master at making people comfortable and happy, and is so popular with A.A.'ers that the crowd often surprises him at the end of the journey with a friendship gift.

In fact the whole spirit of these trips is "friendship on a trip", and when you add to that all the things we will see, all the places we will go, and the first-class service we will receive, you have something that no other tour provides.

Remember that our all-expense ticket (approximately \$325) includes all necessary expenses for the 24-day trip—even tips. We will make a grand circle tour of all of the United States west of the Mississippi, besides excursions into Canada and Mexico. Like a fascinating kaleidoscope, there will pass before our eyes each day ever new and colorful sights—the spectacular Rockies, the beautiful Pacific Northwest with its spring-like climate at this season of the year; the picturesque old

Canadian city of Victoria on Vancouver Island, which we will reach by boat; the great berry section of Puyallup Valley; snow-capped Mount Rainier and Mount Shasta; then from one end to the other of California, where we will visit San Francisco, Yosemite National Park, the Mariposa Grove of Big Trees (some of which were already big when Christ was born in Bethlehem); we'll visit Hollywood, Los Angeles, and San Diego, where we will stay at the famous Del Coronado Hotel.

We will swing back home by way of the Southern route, stopping at El Paso, Texas, and at Juarez, Mexico, where still lives the romance of Old Spain. We'll spend a day and a night in New Orleans, a city whose past is so entwined with early days of American history that a visit to its old French Quarter is like finding yourself in a dream of long ago days.

So make up your mind now to take this trip with us. We promise you it will be a happy one, an experience that you will always remember with keen pleasure. As only a little over a month remains before our tour starts, we suggest that you make your reservation as soon as possible, enclosing with it a deposit of \$5.00 for each person for whom you make reservation. This money will be refunded if you find later that you cannot go. Address, Mr. E. R. Eastman, Editor of *American Agriculturist*, Savings Bank Bldg., Ithaca, N. Y.

If you have not yet sent for a copy of our itinerary, fill out the blank below and mail it to the above address, or just send us a postcard with your request.

Mr. E. R. Eastman, Editor *American Agriculturist*,
Savings Bank Bldg.,
Ithaca, N. Y.

Please send me, without any obligation on my part, your illustrated itinerary giving complete details of your Western Wonderland Tour, Feb. 24-March 18, with exact cost of your "all-expense" ticket.

Kernels, Screenings and Chaff

By H. E. BABCOCK

"Mr. H. E. Babcock,
Ithaca, N. Y.

Dear Mr. Babcock:

Your letter of December 27, 1939, resigning from the Board of Directors of the Central Bank for Cooperatives, has been referred to me for acknowledgment. I regret your decision in this matter as I have been told of your effective and constructive work on the Board of Directors.

Very truly yours,
(Signed) A. G. BLACK,
Acting Governor."

THE above letter is self-explanatory to all readers of this page who saw the letter I sent to Secretary Wallace on December 27, 1939 resigning from the Board of Directors of the Central Bank for Cooperatives.

Acting Governor

It seems to me that it is significant that Mr. Black signs his very courteous note as *Acting Governor* of the Farm Credit Administration. Apparently the President and Secretary Wallace are as yet unable to appoint Mr. Black Governor for technical reasons and, of course, if they finally do appoint him Governor, his appointment, in order to stick, will have to be confirmed by the United States Senate.

Now, I don't think it is important whether Mr. Black is ever appointed Governor of the Farm Credit Administration or not. *The real Governor now, and as long as he remains in office and the President continues the Farm Credit Administration under him, is Secretary Wallace.* In fact, I have before me a Washington dispatch carried by the New York Herald Tribune under date of January 10 in which appears the following report: "*In an order today Mr. Wallace made Black directly responsible to him.*" So in the fight which is ahead to win back the political independence of the Farm Credit Administration, it seems to me logical to forget Mr. Black and concentrate on Mr. Wallace.

Qualifications for a Borrower

Further confirmation that Mr. Wallace is in the saddle and riding hard is borne out by a sentence in the same dispatch I have quoted above which reads: "*It has been suggested that the F.C.A. mark down and extend delinquent loans at a level which would enable the*

borrowers to pay." The borrowers referred to are those living in the Great Plains region. Note that nothing is said about marking down the loans even of delinquent borrowers in the Northeast.

If history is to repeat itself, and there is no reason to expect it won't, these may become the best qualifications for a farmer for borrowing through the Farm Credit Administration: (1) *Be a Democrat* (2) *Be broke* (3) *Live in the South or Mid-west.*

Politics the Issue

Now, I expect that my Republican friends will gleefully respond to the above formula just as they rushed to commend me for my action in protesting the grab of the Farm Credit Administration by Democratic politicians. *These good Republicans, however, entirely missed the point.* I don't believe farmers over the long pull can trust a Republican politician with unlimited power over their sources of credit any further than a Democratic politician. In fact, a Democratic politician like Wallace might have the edge over some Republicans because he is certainly sympathetic toward and friendly to farmers.

The issue is not which party shall have political control over the sources of credit to agriculture, but whether a set-up will be permitted which will allow any political party to exercise such control.

Farm Bureau Acts

Executives of the American Farm Bureau Federation were rumored to have been in on the deal which preceded the President's action in firing

Governor Hill and handing over the control of the great Farm Credit machine to Wallace. I don't know whether they were or not, but it wouldn't be surprising if they were because O'Neal and Smith of the American Farm Bureau Federation are quite apt to be involved in deals with Messrs. Roosevelt and Wallace. *Whatever the original position of their officers was, the Board of Directors of the American Farm Bureau Federation has moved with commendable haste to clear the record.*

They have just held a meeting and just released, not an hour before this was written, the following resolution:

"For twenty-five years farmers have struggled to build up a sound, effective, permanent and independent Farm Credit system including the Federal Land Banks, the Intermediate Credit Banks, the Banks for Cooperatives, and the Production Credit system. Ultimate objective is to have a credit sys-

tem, farmer-owned and farmer-controlled. This objective, we believe, can best be achieved by placing complete administrative responsibility in the hands of an independent Board of Governors to be appointed by the President and confirmed by the Senate with terms of members so staggered as to insure continuity of administration. We will aggressively support legislation directed toward this objective."

The action of the American Farm Bureau Federation stated above now puts every major farm organization in the United States on record against leaving the control of the Farm Credit Administration with Secretary of Agriculture Wallace.

* * *

New Deal Farming

We have just closed our farm books at Sunnyside for the year of the New Deal 1939. On the whole the record is not too bad. Gross receipts were substantial; expenses, while high, were pretty well under control, ex-

The self-feeders shown in this picture were designed by O. M. Crile, superintendent of a farm owned by Cornell University, at Roswell, New Mexico. The lambs are part of a lot of 3000 which Mr. Crile has just put on feed last fall, at the time the picture was taken. Note the way they have been docked. Each one is carrying about a pound more tail than a docked lamb would carry in the Northeast. One pound of tail on one lamb isn't much but on 3000 — well, it's quite an item.

Francis V. Garrison, of Wallkill, New York, sends me this picture of a pair of four- and five-year old mules, weighing 3200. I have been envious of Mr. Garrison ever since. Throwing out a direct challenge to those teamsters who belittle the mule, Mr. Garrison writes: "I disagree with your teamster who says that the only way to drive a mule is to follow him around. You can do more with a mule than you can with a horse."

There wasn't crib room on the farm for this corn. There wasn't room in the local Midwest elevators for it. The terminal elevators couldn't handle it, so the government bought thousands of steel bins and filled them up with it. As Northeastern grain bins run dry and haymows and silos empty, it should be comforting to gaze at the stocks in Mr. Wallace's ever-normal granary.

cept on one or two items, and while we record an inventory shrink of around \$1500 it comes mainly from very conservative pricing on January first, 1940, of what we had on hand. *This conservatism, we believe, is justified by the outlook.*

POULTRY DISAPPOINTING

Of our larger enterprises the returns from our poultry are the most disappointing. In fact, when we get the totals of income and costs together for the year the picture is much worse than we thought it would be. The piling up of the effect of low egg prices week after week simply kept the gross receipts down to a point where they could not absorb the expenses and show a fair return for labor and overhead.

We are going ahead with our poultry enterprise in 1940 as usual. We are glad, however, that when we built our barns we properly arranged our laying pens so that they could easily be converted into quarters for livestock. This means that if we do abandon our poultry enterprise we will not have any idle hen houses standing around to mar the landscape.

We got by far the best production and I am sure did the best job of management in 1939 we have ever done. What licked us, was the egg-feed ratio. *What made the egg-feed ratio bad most of the year was our government's policy of supporting the price of corn, for corn is what feeds poultry.* If this policy is to continue, that is, if the government is never going to allow poultrymen of the Northeast the price advantages which naturally follow bumper corn crops, and if it is going to promote—as it is doing—the keeping of poultry in surplus feed sections, the future of the poultry industry in the Northeast just doesn't look too good to me.

Verbal Promises Again

"Some time ago I bit on some paint sold by the ——— Company. When I put it on the house it only went half as far as the agent said it would. Also, I found that I could buy just as good at the local dealer for less money. I have paid no attention to their letters asking for payment—they do not have my signature but I did allow the agent to send me the goods and I accepted and used it. What would you advise me to do?"

It is my belief that this company can collect their pay if they want to take legal measures. The fact that the price was out of line is not usually considered by the courts as a good defense. This is a matter that the buyer is supposed to check before he signs the agreement. The defense in this case would be that the material did not cover as much as guaranteed or that the quality was not as guaranteed. Here again, any verbal promise the agent makes is not necessarily binding on the company. Our reader's experience points to the importance of careful consideration before signing agreements of this sort.

More Homework

"I am sending you a letter for your investigation. Will you please let me know what to do in this matter. Often you have advised readers to investigate before investing their money."

The letter our subscriber enclosed was one which requested a dollar as a down payment for material to be used by the subscriber in crocheting. The supposition is that she would be paid for the work done. Our general advice, given many times in the past, is to make no down payment for homework. In this case our advice is strengthened by a report we have, which, to speak mildly, does NOT give this homework proposition a good recommendation.

Cheap Tires

"Can you recommend the enclosed advertisement for tires? If you can, I would like to do business with them."

The advertisement our subscriber enclosed quotes tires at a very low price. At first glance it would appear that they were new tires, but in the body of the ad it states that the tires are "reconditioned" with high grade materials. In other words it appears that they are used tires that have been repaired. Frankly, it is my belief that any subscriber can get more tire value per dollar by buying new tires, or if he wants to buy used tires, to buy them from his local garage man or tire dealer.

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

er. The advertisement contains a guarantee to replace any tires which fail to give twelve months service at half price. In this connection some readers have reported their experience of having such a tire blow out after a few weeks, and being unwilling to pay one half of the original price on the supposition that they would get another tire like the first one.

Your Name in Print

"Would you kindly give me the rating of the ——— Co.; they offer a prize contest for poetry and publish your poems if you buy a book for \$3.00."

It is my opinion that this offer is a clever way of selling a book of poems. If your poems have sufficient merit, publishers of periodicals will be glad to buy them and pay you for them. Therefore the question is, do you want to see your name in print at a cost of \$3.00?

Unordered

"I answered an advertisement of a stamp company offering a stamp catalogue free. Along with it they sent some stamps. Now they are trying to make me pay for them."

If, as you indicate, you did not order the stamps, you are under no obligation to pay for them. Neither are you required to return them, but if they will send the postage, I suggest you return them as a good way to avoid receiving any further requests for the money. Such sending of unordered merchandise should be discouraged.

Unauthorized Agent

I ordered two gallons of paint from an agent of the American Asbestos Products Co. of Cleveland, Ohio, paying cash for it. The paint didn't come, so I wrote the company. They replied that Mr. Gadner was a former representative of theirs, that salesmen are not permitted to make collections, and that the order stated that the salesman was not supposed to collect money. They promised, however, to write this agent at his last known address about the matter.

We are publishing this letter to emphasize the importance of reading contracts and the danger of paying agents more than the amount specified on the contract. Where agents collect a down payment, the amount is usually their commission so it is unnecessary for them to turn it in to the company. Inasmuch as the company never received the order, they are under no legal obligation to fill it or to return the money; but they are interested in doing everything possible to correct the situation and see that the agent makes a refund.

A Gas Well

"Thinking that perhaps you have had requests from farmers about this matter of gas and oil rights, I would like information about my lease."

A producing gas well in a new area is exciting. It is more than that; it is a profitable development for the landowner and the entire community. Because the situation is new however, land owners do not always profit from the situation to the full extent of its possibilities. There is always a question as to the extent of the field. Companies interested in drilling usually lease drilling rights on the surrounding land, and then if new wells are dry holes, the leases are terminated. In our opinion there is no object in leasing land unless you get something from it. Do not tie up your land for a considerable period without a cash return, and a provision that if gas is struck you will get a royalty of 1/4 of the amount produced. We are always glad to answer letters from readers on this matter of gas and oil leases.

Automobile and train collide, the car was wrecked and four persons were killed.

SO OFTEN it is shown to us that everyone who rides in a car should have travel accident insurance.

Mrs. John L. Rice (Deceased) Parish, N. Y.

ance protection. Both husband and wife and each son or daughter need a policy.

For instance, four persons were killed in this accident. Only one, Mrs. John Rice, carried a North American Accident Insurance Company policy.

Mrs. Rice had the policy because our licensed agent, E. R. Ennis, had called at the home and insured Mr. and Mrs. Rice. The fatal accident happened about three months after their policies went into force.

The Policy Pays

\$10.00 weekly benefit is paid to the insured while totally disabled in an automobile accident where the car is wrecked. You can draw as much as \$130.00. If the injuries sustained prove fatal and the insured dies within 30 days from the date of accident, \$1,000.00 is paid to the insured's estate.

In this accident \$1,000.00 was paid the family. Mrs. Rice was survived by her husband and five children ranging in ages from 5 to 15 years.

Attorney Donald Peterson, Parish, N. Y., Writes

"On behalf of Mr. John Rice, husband of the above named deceased I wish to thank you and your Company for the prompt and efficient manner in making payment under the above numbered accident insurance policy.

"The collision between the automobile and the locomotive occurred September 9, 1939 causing immediate death. Claim was filed with your Company September 16, 1939, and a check from your Company in the amount of \$1,000.00 was received September 29, 1939. It was

Mr. John Rice with his five children received \$1,000.00 North American check from our agent, Mr. E. R. Ennis.

especially appreciated because of the utter lack of 'Red Tape', and the courteous behavior of the adjuster."

When you renew your policy, we suggest you order the new \$2.00 policy that gives more protection.

THE G.L.F. PAGE

The basis of a sound business cooperative is voluntary use by fully informed patrons

What every young chick should know

A BABY CHICK doesn't know anything except that it's hungry and maybe cold. The man who raises chicks needs to know all the things the chick **should** know about temperature, floor space, litter, and so on.

- There are some very good college bulletins that give helpful advice on these points—Pennsylvania State College Bulletin C-121, Cornell Extension Bulletin E-153, New Jersey Extension Bulletin C-247

- When it comes to feed, the science of chick nutrition has grown so complicated that feeding chicks is no longer a one-man job. The poultry raiser needs a G.L.F. feed service to look after the job for him.

- Such a service can and does keep track of all the research being done, develop formulas with the help of college specialists, guard the quality of ingredients, and finally put down on the farm a bag of mash that is **right** for feeding chicks; and it can do these things at a lower net cost than by any other system.

- As an illustration, consider **yeast**. For years poultry scientists have known that yeast is one of the very best sources of the "Vitamin G complex"—a group of three or more vitamins that chicks need to live and grow. It is so good that research workers have used it as a measuring stick to check the efficiency of other ingredients. But it was never produced in the quantities needed for use in mashes. G.L.F. worked with yeast producers to get production on a volume basis.

- As a result of this, Starting & Growing Mash now gets most of its Vitamin G from 40 pounds of brewers' yeast per ton, 60 pounds of whey, and 100 pounds of alfalfa meal. This combination equals at least 250 pounds of dried skimmed milk in Vitamin G value, and will do exactly the same job.

CHICK REARING SUGGESTIONS

Nearly everybody who mixes feed puts out a folder or booklet on rearing chicks, and G.L.F. has one too. It not only explains how to feed Starting & Growing Mash, but tells **what's** in the feed, **how much**, and **why**. It's worth reading. If you don't get one in the mail pretty soon, ask for it at your G.L.F. Service Agency.

PATRONS SAVE HALF MILLION ON BAGS

62% of the feed now being shipped from G.L.F. mills is going out in bags returned by patrons, either directly or through their Service Agencies. First class G.L.F.-branded bags are worth 11 cents at the receiving plants, slightly less at Service Agencies. By letting each bag make several trips from mill to farm, patrons are saving about \$500,000 this year. Another cooperative program that works.

YOU DON'T GET YOUR FINGERS WET

Ever carry a chick watering can—and find you couldn't do it without getting your hand in the water? On Unico waterers, the handles are placed so you don't get wet. When farmers, through their cooperatives, began to tell manufacturers how they wanted their equipment made, things happened. They are now getting feeders and waterers made of better steel with more zinc on it, and put on right, so it won't crack and peel off.

EWING GALLOWAY

A BRIEF NEW ENGLAND *Journey*

I KNOW that more than once I have explained how on this farm we now and then sign a Declaration of Farm Independence and go on a not very long journey to see some of the things that lie beyond our local horizon.

In accordance with this commendable resolve, on the last day of September, my wife and I commandeered the family car and set a course for Massachusetts. The reason why we chose Massachusetts rather than some other region is the fact that we have a daughter in the State Reformatory for Women located at Framingham in that state. In order to avoid any unfortunate misapprehension, let me hasten to add that her connection therewith is as an officer rather than an inmate. Then apart from this tie there is the additional reason that New England is always a good place to go.

Thirty miles east of Albany and almost exactly on the New York-Massachusetts State Line, we turned off the Boston Post Road for a half mile in order to drive through the village street of the one time Shaker Community at Mount Lebanon. It is a good many years since I told the story of the Community in *American Agriculturist* and I do not propose to repeat it at this time, although I believe it is one of those tales which will always be worth

retelling. As late as 1875 the Community was still numerous and apparently wonderfully prosperous, although I imagine the seeds of decay were already present. About thirty years ago, when I attended a Farmers' Institute at Lebanon, a few ancient, time worn Brothers and Sisters still kept the faith in a scornful and unbelieving world. Two or three of the Brothers came to the meeting, but I remember the name of only "Brother Joseph". The imposing buildings of the Community have now been taken over by the Darrow School for Boys, but I feel in my heart a stirring of regret because after a century and a half a once great dream has come to an end.

It is hardly more than ten miles from the Shaker village to Pittsfield, the metropolis of western Massachusetts, a busy city best known as the seat of one of the most important plants of the General Electric Company. A good many times in the past I have driven through Pittsfield and past the Common, and almost never without recalling the story of Elkanah Watson and his exhibition of the two Merino

By JARED VAN WAGENEN, JR.

sheep which was the beginning of the Agricultural Fair in America. So, while the casual tourist sees at this point only a very modern street with swirling traffic, swollen by the long distance busses and trucks of a truck line highway, I see more. For I see the village of one hundred and thirty years ago and the grass grown Common overshadowed by great elm trees—trees older and larger than any that now remain. And around the Common on four sides are stores and blacksmith shops and the offices of country lawyers and doctors and the white New England houses where the important families of the village reside. I notice that this day the Square has an unusual air of bustle and liveliness. There are many teams tied to the hitching posts and everywhere ox carts—and standing before them great red and white oxen, half asleep with drooping heads, chewing their cuds in utter patience. And on the Common under a tree so vast that in common speech it has come to be distinguished as "The Big Elm", there is a compact group of people, farmers and their wives and in the very midst two strange sheep, such as had never before been seen in New England, and with them the enthusiastic Elkanah Watson, explaining and answering questions and growing almost eloquent as he expounds the excellence of the two fine woolled sheep that make up the exhibition. Such was the beginning of the Agricultural Fair in (Turn to Page 8)

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

THE 74TH ANNUAL session of the National Grange will be held in New York State. This was the decision just reached during a ten days' meeting of the executive committee held at Washington, D. C., and is in response to an invitation extended at the Peoria session by State Master Raymond Cooper, which was later confirmed by vote of the New York State Grange at its Syracuse session in December. The exact location of the convention will be determined later, with choice apparently to be made between Syracuse and Rochester.

The 1918 session of the National Grange was held at Syracuse and that of 1930 at Rochester, with its great class of 11,125 candidates for the Seventh Degree. Every possible effort will be made by the new State Master, William J. Rich, and his associates in the Empire State to round up a class of equal dimensions for the session of next November. The dates are November 13-21.

At the conference of deputies and other workers held at Syracuse, January 18, announcement of the decision of the National Grange to come to New York for its next session was received with great enthusiasm and immediate steps will be taken to plan the necessary details of entertainment.

* * *

CONNECTICUT State Grange has a new Master, as the result of the decision of Edgar L. Tucker to retire at the close of his two-year term. The new Master is Sherman K. Ives of Morris, who has been overseer of the State Grange the past two years and has a long line of prominent Grange ancestry. His maternal grandfather was one of the early masters of the Connecticut State Grange and it was largely due to his tireless efforts that the organization was kept alive in Connecticut during the depression period of the early 80's.

* * *

CLOSELY FOLLOWING his recent initiation into the subordinate Grange at Dover, Mass., Governor Leverett Saltonstall attended the annual session of the Massachusetts State Grange at Pittsfield and received his sixth degree in the Order. Furthermore, Governor Saltonstall requested the privilege of being one of the marching candidates in the class of 402 initiates. His request was heartily granted and the tall, dignified figure of the Massachusetts chief executive led the group of marchers on the floor. Following the degree, Governor Saltonstall gave an earnest 30-minute address, in which he paid high tribute to the Grange as "one of the sanest groups in present-day American life."

* * *

THE GRANGE in Maine is sponsoring a constitutional amendment to prohibit the diversion of all motor taxes and gas revenue from other than highway uses, the recent State Grange session having passed a vote to tackle this undertaking. Considerable legislation has been put on the statute books of Maine in recent years, aimed at the same result, but these efforts have proved unavailing and the widespread diversion of motor funds still goes on. The fight over the proposed constitutional amendment will be a hot one and

Organized Farmers Fight Farm Credit Change

THE ORGANIZED farmers of America are surely up in arms over the transfer of Farm Credit from its former independent status to the complete control of the Department of Agriculture.

NATIONALLY

At its recent annual meeting in Washington, the National Cooperative Council, representing most of the great cooperatives of America, reelected its veteran President, John D. Miller, that old fighting war horse for organized agriculture, and then passed a resolution strongly opposing the transfer of the Farm Credit Administration to the Department of Agriculture.

"We regret," said the Cooperative Council's resolution, "the change in policy which has terminated the independent status of the Farm Credit Administration."

Already reported in these columns were the strong resolutions or statements by both national and state Granges, urging Congress to restore Farm Credit under an independent Board so as to preserve its efficiency and remove it from the dangers of political control.

Meeting in Washington in January, the Executive Committee of the American Farm Bureau Federation adopted the following resolution, which could not be stronger:

"For twenty-five years, farmers have struggled to build up a sound, effective, permanent and independent farm credit system, including the Federal Land Banks, the Intermediate Credit Banks, the Banks for Cooperatives, and the Production Credit System. The ultimate objective, we believe, can best be achieved by placing complete administrative responsibility in the hands of a Board of Governors, as an independent government agency, members to be appointed by the President of the United States and confirmed by the Senate, with terms of members so staggered as to insure continuity of administration. The Federation will aggressively support legislation directed toward this objective."

IN NEW JERSEY

Both the Grange and the Farm Bureau of New Jersey have lined up against the change, and will work to have Congress restore the independence of Farm Credit.

IN NEW YORK

In New York, in addition to the Grange (whose new Master has made a statement opposing the change), the following state-wide organizations at recent annual meetings passed strong resolutions urging Congress to remove the Farm Credit Administration from the Department of Agriculture and put it back on an independent basis: New York State Farm Bureau Federation, New York State Horticultural Society, Empire State Potato Growers Association, New York State Agricultural Society.

One of the strongest resolutions on this subject was passed by the New York State Conference Board of Farm Organizations, and because it sets forth the reasons why farmers and their organizations are so aroused over this Farm Credit situation, we are printing it entire:

"BE IT RESOLVED, That the New York State Conference Board of Farm Organizations strongly urge The Congress of the United States to enact during the

coming session, legislation to reestablish the Farm Credit Administration as an independent cooperative lending agency of agriculture under the jurisdiction of a well qualified board, with the terms of membership so staggered as to insure continuity of administration over a period of years, to the end that:

1. The \$130,000,000 of capital stock now held by farmers in this nation may be preserved together with the accumulated reserves which are rightfully the property of the stockholders.
2. The cooperative features of the Farm

Credit Administration may be continued and expanded.

3. That agriculture may have its own cooperatively owned and financed farm credit system without permanent direct subsidy from the federal treasury.
4. That efficiency may be maintained in making sound agricultural loans.
5. That agriculture may be assured of a loaning agency, free from political control.
6. That agriculture may have its own independent loaning agency, comparable to that now available to business and industry through the Federal Loan Agency.

BE IT FURTHER RESOLVED, That we strongly urge continuation of the Federal Farm Mortgage Credit Corporation, the enabling legislation of which expires in February 1940, in view of the fact that many farmers still need this form of farm credit.

BE IT STILL FURTHER RESOLVED, That we emphasize strongly that agricultural loans to poor credit risks, who are worthy of rehabilitation should be provided for, through a liberalization of the Farm Security Administration rather than jeopardizing the Farm Credit Administration through unsound loans.

Communists Active in Dairy Sections

WHEN the C.I.O. and the Communist Party tried to get a stranglehold on California farmers, those farmers rose up in their might, organized, and successfully resisted the radicals.

Realizing that they could make little or no progress against strongly organized farmers of the West Coast, the Communists turned to the milk farmers in the East last summer after the courts had thrown the milk marketing agreements out, and when farmers were further afflicted by a severe drought.

Lenin, former Communist leader of Russia, said:

"Our task is to utilize every manifestation of discontent, to collect and utilize every grain of every rudimentary protest."

At a radical meeting on the West Coast, in a discussion of the best methods of attacking American institutions, the following statement was made:

"We cannot get people with us by attacking, but we can do it by getting them with us on these minimum programs such as milk distribution, etc."

Knowing that they cannot get far by approaching farmers directly, the Communists and C.I.O. leaders are getting others to do their dirty work. These Communists and labor leaders, and their local tools and stooges, distribute circulars containing absurd misstatements, and try to build up discontent in the farmer's mind. They criticize farmers' constructive organizations and their leaders, and wherever they dare they work directly or indirectly against the present milk marketing agreement.

Some of the milk dealers fit right into this destructive program. Any farmer should look over carefully any so-called farm leader or organization which has proved to have any affiliations or relationships with un-American, destructive "isms". Rest assured that their purpose, no matter how much they may talk about the distressed dairy farmer, is to use him and the troubles of milk marketing, to further their own evil activities and aims to destroy our democratic government.

You think these various warnings you hear from time to time about radicalism and Communism are absurd? Listen! No man in the United States is better informed about the activities of these "isms" than J. Edgar Hoover, head of the United States G-Men. Mr. Hoover, who recently uncovered the radicals in the Christian Front who were plotting to overthrow the United States government, said:

"It only required 23 men to overthrow the Russian government and to set up Communism."

IT CAN HAPPEN HERE!

Nominate an A.A. Foundation Director

AMERICAN AGRICULTURIST is owned lock, stock and barrel, as the old-timers used to say, by its readers through the AMERICAN AGRICULTURIST FOUNDATION. The Foundation uses the profits from the publication, above those necessary to publish the best farm paper, for loan funds for farm boys and girls in colleges of agriculture and home economics in the northeastern States where *American Agriculturist* circulates.

One member of the Board of Directors of this Foundation is elected each year. The annual meeting of the Foundation will be held in Ithaca on February 15, when annual reports will be made, officers elected, and a director elected to

the Board from New England. The first New England director on this Foundation was Mr. Arthur Packard, President of the State Farm Bureau Association of Vermont. Directors are not permitted under the by-laws of the Foundation to succeed themselves, so Mr. Arthur Deering, dean of the Maine State College of Agriculture, was elected to succeed Mr. Packard. Dean Deering's term is now expiring, and we shall be glad to have nominations from our New England readers for director to succeed Dean Deering on the AMERICAN AGRICULTURIST FOUNDATION. This is your paper. Write your suggestions immediately to AMERICAN AGRICULTURIST FOUNDATION, Ithaca, New York, and give a brief biography of the man or woman you nominate.

Business and Fun for Your Evenings

LAST issue I suggested that the farm family—Dad, Mother, sons, daughters, and the hired man—resolve themselves into a farm and home Board of Directors or Board of Planners. Suggested for the first meeting of the Board of Planners were some of the spring problems of handling the land, the rotation, what crops to plant, varieties, etc. Letters already indicate that many are following this suggestion to pass the evenings with fun and profit in an interesting and worthwhile game.

Now let us devote several evenings to sessions of this family Board of Planners on the family garden. The first session can be short, because all you need to do is to arrange to get material. Appoint some member of the Board to look through the columns of *American Agriculturist* and write for several seed catalogs. Ask somebody else on the Board to write to your State College of Agriculture for a good bulletin on garden vegetables, and another one on flowers. Delegate somebody else to look through issues of *American Agriculturist* and other publications,

—Picture by courtesy of M. D. Connors, Stanley, New York.

Farm groups, like individuals, need a home. Granges have long recognized this by building Grange halls all over the land. One of their latest moves in this direction is to take advantage of abandoned school-houses like this one at Rushville, Yates County, New York. Rushville Grange recently purchased this high school building, built some 65 years ago, and has converted and remodelled it into a modern Grange hall.

and assemble all the garden material he can find.

When this material comes, you are ready for another session of your Board, and for discussions of the various problems that arise. You will think of many. Here are just a few.

Garden Problems that Arise

1. Why Have a Garden? Here's a chance for a debate. Speaking for the affirmative, remember that a vegetable garden not only saves purchasing supplies at retail prices, but in many cases the vegetables are better than you can buy.

2. Is Your Garden Spot Large Enough? If it is a farm garden, there is no need of putting the rows so close together that they cannot be worked with horse and machinery. Save all the hand work you possibly can. Land is cheap.

3. Fertilizer. Read the article on the opposite page about farm manure in the garden. Don't be afraid to use commercial fertilizer also, but remember that it must be put on carefully so as not to burn the seed.

4. What Will You Plant? In addition to the old standbys, I have a lot of fun each year experimenting with new varieties. Once in awhile I get something that has the old ones beat all to pieces.

5. Succession. It is possible so to plan a garden as to have some vegetables from early in the season until frost. Sweet corn is a good example.

6. Perennial Vegetables. Examples are pie plant, asparagus. Every farm ought to have an asparagus bed.

7. Small Fruits. What a lot of good living there is in a succession of berries from the earliest strawberries until the blackberry season is gone! Berries are possible and practical on every farm. They are fun to grow and grand to eat.

Flower Garden. In all your planning for a living, don't forget to plan to live, also, by adding beauty.

The whole Board of Planners should cooperate with Mother and the girls to get a lot of both perennial and annual flowers going. Most seed catalogs contain descriptions of both vegetables and flowers. You may think it strange, but there are few men, no matter how tired and busy they are with the regular farm work, who don't soon become interested in flowers as a hobby after they have worked with them for awhile.

Write me about meetings of your Board. We will pay \$1 for every letter that we can find room to publish.

"Winter's fog will freeze the dog."

Old country saying.

Eastman's Chestnut

TO ILLUSTRATE the lack of commonsense in many of the schemes now being proposed to help farmers, Mr. Halsey Knapp, Director of the New York State School of Agriculture at Farmingdale, Long Island, tells this story:

A farmer borrowed a large kettle in which to boil water at hog-killing time. He cracked it, and then returned it to the owner without saying anything about the damage. The owner sued him, so the borrower set up this defense:

1. He did not borrow the kettle.
2. The kettle was cracked when he got it.
3. It was whole when he returned it.

How We Made Our Garden

DROUGHT-PROOF

by Mabel G. Feint

FOLLOWING the dryest garden season since weather records were kept, we will be wise to assume that we will have others like it for a time and plan our gardening accordingly. Next to a system of irrigation, I believe the use of lots of stable manure is the best protection against dry weather. It chanced that my own garden was given an extra heavy application of it last winter. To that fact I attribute the even better than usual garden we enjoyed last summer. Almost nothing but the late planting of sweet corn suffered from drought, and that not badly.

Some are afraid to use manure for fear of increasing the weed crop. This is a mistake, for the weeds are always with us anyway. Weeds are no problem if the hoe is used at the strategic time to stir the top soil after each rain or when the new sprouting weeds are tender and cover the ground like a delicate moss.

Some gardens have been run with good success for years without manure by using plenty of fertilizer. But last year baked them dry, and there was little or no vegetable harvest from them. The plants just shriveled up and died. There was too little humus in the soil to hold the moisture so necessary to plant growth.

One little lady of my acquaintance, who lives alone and whose hobby is gardening, brought her garden through the drought in splendid shape. When she saw that the drought was something more than we had coped with before, she had several extra wheelbarrow loads of manure dumped about her garden. This she spread along the rows, pulling it close to the plants that seemed wilted and stunted. The results were amazing. They sprang into lusty growth at once.

We like to spread the manure in early winter, and plow it under in early spring as a matter of convenience. Fall plowing is even better as the soil seems to hold water better. I couldn't say how much we apply, but it's a good

Nothing makes a garden grow like barnyard manure. Nothing conserves moisture better. Weeds are no problem if they are destroyed at the right time.

heavy application, repeated every year.

Professor A. J. Pratt of the State College at Cornell advises 20 tons to the acre. More easily understood, this is about 1 lb. to the square foot.

To prevent too much leaf growth at the expense of fruiting or root crop formation, we also follow his advice to apply, broadcast, 16 per cent superphosphate at the rate of 2½ lbs. per 100 square feet. This insures a heavy set of fruit, even on the most temperamental pepper plants.

With this sound basis for a good garden, one can hardly fail. In fact, I don't know of any other way to have such year 'round satisfaction in a hobby, given a little bit of cash, some good seed catalog and a spirit of adventure.

There's a world of pleasure and added profit in trying new ideas and varieties new to your locality. When at all in doubt about the dependability of the newer things, I always plant plenty of the old standbys too. For instance, I had a lot of fun growing Bermuda onions last year and presenting them to my gardenless friends, along with a basket of spinach, early beets, lettuce,

cucumbers, and the like. I bought my little Bermuda plantlets, but this year, in February or early March, I mean to sow a flat of Bermuda seed and grow my own transplants.

I set them out about 3 or 4 inches apart, and in rows a foot apart. Despite the drought they were so large they crowded each other out of line in the row and were very tender and delicious. We are still eating them, our favorite way of serving being to cut quite thick slices, separate into rings,

dip in a flour-egg-milk batter, and fry crisply in deep fat.

Besides the Bermudas, I had a few rows of seed onions. At the side of the garden, where they are not plowed out, I have a long row of the new giant winter onions that are left there the year 'round to yield quantities of delicious, tender, early young onions. There is also always a row of the old-fashioned "potato" or multiplier onions, set in the fall for early spring growth. These should all be pulled, separated, and reset each year. Don't forget to give these liberal amounts of manure, along with the rest of the garden. Then there's the fall-sown bed of lettuce, radishes, spinach and beets for early spring growth.

But I want to tell of the more adventurous things, like the panful of peanuts the children and the whole family so enjoyed this fall from a couple of 5-cent packages of early small seed peanuts offered by a northern firm. Three times that amount of peanuts bought at the store wouldn't have been the fun these were! And this was a year of terrible drought!

Then there were the two varieties of watermelons, Northern Sweets and Honey Cream, which gave us all we could eat until into December. And the early Lake Champlain cantaloupes that were ready for the table in August; and other varieties, including the intriguing long, yellow Banana Melon.

We enjoyed the "sweet potato" squash, an early yellow-meated squash for individual servings, baked. They made the loveliest gourds, too, to add to our gourd collection for table decorations and for gifts. Because we don't like too sprawly plants, we will try "bush" varieties of summer squash, lima beans, and so on this year.

Another thing that yielded dividends was the improved California Wonder Pepper, not so large as its parent, but earlier and thicker of meat. We are enjoying for sandwich fillings the dozen cans of "pimentos" I put up from it, and still have thick-meated, fresh red peppers to use in salads. They yield long and abundantly.

FIRES and Insurance

THE countryside around Tully and Homer in Central New York seems to be having its share of fire this winter. A man lost a barn full of cattle. Not long after this on Sunday evening, just as we were starting to pop corn, the phone rang. The boss answered it. He said: "There's a fire up the road, either in the mill or house. I didn't understand which." So he grabs the fire extinguisher, and I gather up the milk pails. We hop into the car, and are the first ones at the fire.

The upstairs is all smoke. The boss goes up with the extinguisher, and I

fill the buckets at the pump. But we can't get near enough to the blaze to do any good. The fire trucks from Homer and Tully arrive. Hose is unwound and put in the creek. Flares are put on the highway. Ladders are put up against the house. Windows are smashed in, and the pumps start pumping water.

In the meantime everybody is carrying out furniture, stoves, groceries, bedding and what not, and piling it up around in snowbanks. The State Trooper arrives to take charge of the traffic jam. Cars are lined up a half mile north and south.

The pumps continue to squirt water

Next to sickness and death, the destruction of a home by fire is the worst calamity that can befall a family. A little care in fire prevention methods can save a lifetime of heartaches. —Photo by Ewing Galloway.

all over, some going down my neck. It is a cold night and icicles three feet long form on the eaves. The paper and plaster fall off on the inside. Finally the fire is out.

The house is a mess. The windows upstairs are broken out. The floors are flooded with water, and the interior upstairs is badly burned.

Well, I learned that you can't put out a fire with a pail of water and a fire

extinguisher unless you are Johnny-on-the-spot, and few people are.

This fire was caused by a defective chimney. Other causes are carelessness with matches or cigarette stubs, upset lamps and lanterns, hot coals in ashes, defective wiring, and fire traps.

The only safe way is to keep your fire insurance up to date and use all possible care to avoid having a fire.

—R. W., New York.

I buy everything from homefolks

"I ALWAYS BUY ARCADIAN NITRATE, the American SODA, for the same good reasons that I always trade in my home town. I know that my neighbors will give me good quality at a fair price. They want my friendship and my business for many years to come.

"Since homefolks started making ARCADIAN, we have been getting better soda in a better bag at a lower price. During the 11 years that the big American nitrate plant has been operating at Hopewell, Virginia, the price of nitrate of soda has come down 40 per cent. And, under present conditions, it's good to know we have an American supply of soda.

"Yes, sir, I say: Look for Uncle Sam on the bag! Always ask for ARCADIAN NITRATE, the American SODA! Buy everything from homefolks!"

"I'll Meet You at the WAKE"

By ED. W. MITCHELL

TALKING to some old time apple growers the other day I was reminded of the story of the two Irishmen who went to a "wake" a little befuddled from too much good Irish whiskey. One of them was not acquainted with the deceased and had only gone along to keep his friend company. As they knelt by the coffin in the darkened room he whispered to his conductor, "I never knew your friend, Casey, but I will remark he had a wonderful set of teeth."

Apple growers are looking on life these days in a dark, gloomy atmosphere, but as we look back over the trail, was it so much better and easier 25 or 35 years ago? I do not want to stick my neck out too far and go back beyond that.

Thirty years ago the only spray materials available were bordeaux, lime sulfur (mostly homemade), and arsenate of lead. Few knew much about using them and I think 90% or better used a hand pump to make the applications. I remember that one man, hired to push the pump, jumped off the rig and ran away when he found out he was using poison!

Now, we have so many materials to choose from, that one has to be a chemical engineer and a graduate pathologist and entomologist to know what to choose and how best to use it, and an M. E. degree to run the rig.

In those good old days we knelt at the pile of apples heaped under a tree or laid on straw on the barn floor and picked out the "platers" and then carefully stove-piped the rest into the center of the barrel to be pressed 'till the juice squirted out. Some different, that, from our modern graders and methods of packing and handling.

I recall we loaded 15 or 20 barrels on a wagon and spent about half a day taking that little jag to some distant car or boat. Now a truck backs up to the barn and runs off to market or

storage with a half a carload.

Then we waited for a buyer to come along and make us an offer, or took a chance and shipped on commission. Information at the farm as to market outlook and conditions was mighty meager. Today we have the best marketing information in the world, and at least some opportunity to go to market either as individuals or co-operating groups.

No industry that has overcome as many handicaps and made so much progress in the last quarter of a century is going to lie down and die like a cold sheep just because a few years turn out badly. We have everything we can ask for to work with on the job that is set for us to do; knowledge, tools and freedom of opportunity. What more can a man ask for and still claim credit for success?

Certainly we have a lot of chores that need attention. We must develop and promote the use of apples in by-products. We must devise ways and means of keeping culls off the market. We must find some scheme to collect funds for advertising and promotion so that each beneficiary pays his fair share of the bill. We must see to it that our product is presented to the consumers in the best and most appealing way.

These things I suspect are more difficult of accomplishment than killing bugs and blights, but they are not impossible. The main requirement for fulfillment is for all apple growers to pull together, and I am still young enough to think that is a remote possibility. Certainly enough growers in enough localities have done enough to show the way and point out the possibilities. I look for a repetition of the strong movement toward cooperation that we experienced during the last World War when times got too tough for one man to fight and figure out his problems alone. I hope so.

Keeping Apples Longer

By ROBERT EASTMAN.

HOW would you like to be able to keep that bowl of fruit on the living room table filled with your favorite Northeastern apples the whole year long? Healthful fruit every day in the year instead of just "in season" is the goal of workers in the New York State College of Agriculture's Pomology Department.

They call it "modified atmosphere cold storage". These scientists have hit upon the idea not only of keeping the fruit cold but of regulating the amount of different gases in the air around the fruit.

The aim of all this work is to slow up those processes of change which make fruit inedible. Apples, or any other fruits, are living organisms and, just as we do, they breathe in oxygen while they give off carbon dioxide, consuming their own sugars and starches in the process. If you let that carbon dioxide get away, the changes will continue. But if that gas accumulates, it seems to slow up those chemical actions which make the fruit unfit to use. In the past, growers slowed down those processes by keeping the fruit cold. Now they not only keep it cold but let the gas gather to help the cold.

One of the problems these workers faced was the question of how cold to keep the fruit and what balance they should keep between the amounts of the different gases in the air. In the

experiments carried on over the past two years, a temperature of 40° F. combined with an "air" made up of five per cent carbon dioxide, two per cent oxygen, and the balance nitrogen seemed to give the best results.

Not only will this work lengthen the marketing time for the fruit grower but it may be less expensive than ordinary cold storage since the fruit does not have to be kept so cold. The gas costs nothing since the fruit gives it off. Probably when practical equipment is worked out for the average grower, there will be the added cost of installation of proper equipment for regulating the temperature and the amount of gas.

Research on this problem has been under the direction of capable Dr. R. M. Smock, of the Pomology Department of the New York State College of Agriculture. Collaborating with Dr. Smock is competent Archie Van Doren.

The practical results, after this work leaves the experimental stage, will be the conquering of brown storage rot; apples that can be stored for two or three months longer than in ordinary cold storage; and fruit that will remain marketable two or three times as long when removed from the storage. That means thousands of dollars extra for northeastern fruit growers as well as an apple for you and me to munch any time we want.

The Victory of Faith

CHAUTAUQUA COUNTY, at the southwest tip of New York state, was part of the wild frontier for a generation after America won its independence. In 1797, the whole western end of New York — 3½ million acres — changed hands for 30¢ an acre.

Today, however, a strip of that land, 50 miles long by three to four miles wide, is known the world over as the Chautauqua grape belt. Lake Erie moderates its climate. Nature gave it fertile soil. Man's faith and his own hard work made it a garden of vineyards. Every year it grows most of the native American grapes.

Elijah Fay planted the first grapes at Portland, Chautauqua County, in 1818; and by the middle 1800's most of his neighbors were giving up grain and cattle to plant vineyards and orchards. Business boomed. This strip of Lake Erie shore was also the gateway to the plains, and settlers heading west or commerce coming east all passed through Chautauqua's front yard. Hardy pioneers struggled to pay for this land, and for their rich rewards they gave thanks to the Good Provider.

The Chautauqua grape crop was 80,000 tons in 1900, and nearly all of it went to market as fresh fruit. About that time a grape juice factory opened at Westfield; and lucky it did, because since then less and less of the crop has been wanted as table grapes.

Not every farm in the grape belt now grows grapes alone. Tomatoes and berries and other fruit help to piece out when grapes are cheap.

Hand in hand, Lee Downer and his daughter Janice, of the 4th and 5th generations, carry on the family tradition in the Chautauqua grape belt.

The rest of Chautauqua depends chiefly on dairying; and a lot of its milk goes into butter, cheese, and condensed milk. Chautauqua also produces eggs — more eggs than any other county in New York state.

Just 99 years ago, Uriah Downer, a Connecticut boy, headed west to grow up with the country. In Hanover township of Chautauqua he invested his savings as a down payment on a piece of land with a few cleared acres and a modest house. Uriah cleared more land and raised grain, hogs, and beef cattle. Today the main crops from that same land are grapes, apples, and milk from 15 cows.

In the past century, the Downer farm, like the rest of the Northeast, has seen many changes. The second generation of Downers

were charter members in the Hanover Farmers' Club, and for 62 years that club has helped Hanover farmers to help themselves. Through all the changes, the home that offered comfort and cheer to Uriah Downer and his family still offers comfort and cheer to the 3rd, the 4th, and the 5th generations of Uriah's kin — to Walter Downer, to his son Lee, and to Lee's young family.

Struggles that faced the settlers are things of the past, but Chautauqua County farming is still a man's job . . . it takes hard work and enduring faith. Faith . . . in the goodness of nature, in the kindness of man, and in the reward for work well done. Chautauqua County is still a good place to live . . . the Northeast is a good place to farm.

Buy Your Tractor by the **ZONE SYSTEM**

Everybody knows that Case tractors are famous for economy in the power production zone—fuel economy at actual farm work, plus economy of upkeep. Now new Fuel-Miser carburetion makes fuel go still further.

But if you want complete economy . . . lowest cost per acre of work . . . look into the things that make the big difference in tractor costs—the hourly or yearly cost of ownership and upkeep. Look back of the flywheel into the power application zone, where parts cost real money . . . where wear or damage calls for a major operation.

In Case tractors you get the famous Power-Saving Transmission, which has proved itself a money-saving transmission, too. It has conquered wear so completely that cost records covering more than four million hours of work by

tractors 8 to 10 years old reveal **TOTAL** upkeep averaging only about a penny an hour.

Every gear tooth and bearing works at moderate speeds and pressures. This makes it easy to have continuous-film lubrication that renders wear almost impossible. Bevel gears ahead of the transmission and differential ahead of the axle carry only a fraction of the load there would be with ordinary design.

Go to your nearby Case dealer; see for yourself the secrets of this amazing endurance in the power application zone. See how the clutch never needs greasing because it is continuously oiled by pressure from the engine . . . how its power plates are cushioned and well-nigh wear-proofed with oil mist . . . how it is completely sealed against destructive dust.

NEW MOTOR-LIFT IMPLEMENTS That Won't Wear Wobbly

Both 2 and 3-plow sizes of Case all-purpose tractors have the famous Motor-Lift that raises or lowers implements at touch of a pedal. All mechanical, sturdy, and utterly simple, it connects in a jiffy to the Easy on—Easy off planters, cultivators and narrow-row tools. There are also power mowers.

CASE

A Brief New England Journey

(Continued from Page 1)

America as set up on the Pittsfield Common one summer day in 1809.

Coming down from Peru we drove eastward, but we avoided Boston, because a big city is a very poor place to go when on pleasure bent. At Framingham we picked up Daughter Margaret and went to Plymouth, because I think that this seaward-looking bluff where the Pilgrims landed may fairly be deemed the most worthy and possibly the most famous of American historical shrines. The Puritan contributed to America the finest citizenship this country ever knew, although I am not sure but that the Quaker at his best should be included in that high fellowship.

I have long had a curiosity to visit Cape Cod and to gratify it we drove the whole length of the Cape to the very jumping-off place at the tip. As everybody remembers, the Cape is shaped almost exactly like a fish hook and it is surprisingly long. Boston is one hundred and forty miles from the end of the Cape and only a very little further from the New York State line. Geologists say that Cape Cod is to be regarded as only an eastern extension of Long Island. As a matter of fact, the two regions are not as much alike as I had expected, although there are parts of the Cape where a Long Islander would feel very much at home. I suppose cranberry growing is far and away the best known agriculture. Three states—Massachusetts, New Jersey and Wisconsin—produce most of the fruit which traditionally goes with roast turkey, and the Cape is the most highly specialized of these before-named regions. A good deal of the country is overrun with wild grapes—not the little, sour, seedy, purple-juiced "River Bank Grapes" familiar in most of the territory where *American Agriculturist* goes, but the Fox Grape, which may have berries as large as the Concord and may be red, black or white in color. Some vines produce fruit which while thick-skinned and with tough pulp are pleasantly sweet and fairly good eating.

Almost at the end of the Cape or exactly where the barb of the fish hook would be, is Provincetown, an ancient settlement which I suppose is as colorful and unusual as any village in New England. By virtue of lying on the inner curve of the hook, it has a harbor protected from the sweeping gales of the Atlantic. The village has thirty-eight hundred inhabitants in winter and it is almost literally a two-street town. The main street, "Commercial Street", which follows the water-front, is only twenty-two feet wide and is of necessity a one-way street. Closely paralleling it is Bradford Street and the two are connected by a number of alleyways, each with the notice, "Private Way. Proceed at your own risk." So it is that traffic must circulate around the town in a clockwise direction.

A very large percentage of the population are Portuguese—a racial stock very uncommon in America. When the Pilgrim Ship, the Mayflower, came she lay at anchor at Provincetown for a month, while an exploring party scouted up and down the coast deciding upon a suitable spot to establish the permanent settlement. An imposing monument has been erected to commemorate this sojourn.

We drove to the very tip of the Cape or at least as far as an automobile may go. The last several miles is practically desert, made up of drifting white sand with nothing but some hardy bushes growing out of it.

But for me the real high spot of our little journey was Marshfield and the home and grave of Daniel Webster. I have always felt that we folks of Law-yersville had a sort of indirect connection with Daniel Webster by virtue of the fact that he had a college mate—a Dartmouth graduate, one Jedediah Miller, who was for more than a half century a country lawyer and Squire in our community. Moreover he lived directly across the road from us and so was our nearest neighbor.

We usually think of Webster as an orator and statesman and United States Senator for Massachusetts, but he was also most renowned in his private practice as a Counsellor-at-Law, and in an age when a dollar was a large sum of money and when attorneys' fees were only a small fraction of those prevailing today, his great reputation brought him earnings running to thirty thousand dollars a year.

Webster was New Hampshire born, but for the last twenty years of his life his home was near Marshfield, about forty miles south of Boston, and there he had an estate of a thousand or more acres where he found pleasure and relaxation in playing at farming.

Marshfield village is only a tiny hamlet. The Congregational Church where the great man devoutly worshipped fronts on the Common. The Church is very old but is still kept white and beautiful with fresh paint. On each side of the church and stretching far to the rear is a very old populous cemetery, but there is another and much smaller graveyard occupying a little hill top near the old home and there Webster lies buried.

The family plot is a large one and is surrounded by a high iron fence with a locked gate. Among the burial monuments I noted that of a son, Col. Fletcher Webster, who died in the Civil War, having been killed in action while leading his company at the Second Battle of Bull Run. The great statesman himself is entombed with utter simplicity. There is a little rounded mound of earth three or four feet in height and on top of this a low slab such as might properly stand above a Quaker's grave and on it the name, DANIEL WEBSTER, and nothing more. Perhaps those who set the slab realized that he had reared for himself a far more imperishable monument than any tomb of bronze.

It was an October day when I stood there and in my thinking I went back to that other October day eighty-seven years before when they had buried him.

(Continued on Page 25)

STALLIONS of the Year

New York State Draft Horse Club Makes Selection on Basis of Winning Get-of-Sire Classes.

By MORTON ADAMS,
Secretary, New York State Draft Horse Club.

THE VALUE of a given draft stallion in New York State has, up until 1939, been largely a matter of the owner's and the prospective user's opinion. This was changed somewhat last year in at least four counties in New York State. The officers and directors of the New York State Draft Horse Club realized that, to promote the breeding of good draft horses, they would have to assist in bringing to the attention of mare owners, the stallions that were siring the best foals.

Working on a limited budget, the

County Horse Field Day in early August. Morton Adams of Sodus was the judge and he placed the get of the Belgian Stallion Cornell's Gay-Boy 18902, owned and exhibited by Dr. Richard M. Sears of Cazenovia, first in a class of six gets-of-sires which included three animals each.

Two weeks later at the St. Lawrence County Fair at Gouverneur, through the excellent work of Fair Secretary Bligh Dodds and Horse Superintendent Russell Cary, 134 horses were shown before Judge Robert M. Watt of Ithaca.

A class of 12 gets-of-sire competed for the club trophy with George McLearn of Hammond, owner of the Belgian Stallion, Duke DeCorbais 5226, receiving the cup on this stallion's get.

Late in September the Percheron breeders rallied at the Schoharie County Fair at Cobleskill and won the trophy. Mr. Watt was the judge. The winner was F. M. Holmes & Sons of Cobleskill on 3 horses, get of the purebred Percheron Stallion

(Above): Cornell's Gay-Boy 18902, sire of the Trophy winners at the Onondaga Horse Field Day. Owned by Dr. Richard M. Sears, Cazenovia.

(Right): Duke DeCorbais 5226, First Prize aged Stallion at the St. Lawrence County Fair and sire of the Winning Get-of-Sire. Owner, George McLearn of Hammond, at halter accepting the New York State Draft Horse Club Trophy from Club President Dr. Richard M. Sears, Cazenovia.

directors hit upon the idea of giving silver loving cups at three county fairs each year to the owner of the purebred registered, and enrolled stallion whose offspring won the get-of-sire class. This cup was to become the permanent possession of the man who won it three times, not necessarily in succession.

From a survey of the County Fairs in New York State it was determined that St. Lawrence and Schoharie had the two largest draft horse shows and that the Onondaga Draft Horse Club was sponsoring their first county show. These three were designated to have the Draft Horse Club Trophy in 1939. The first show was the Onondaga

Brookside Prince 207198.

It is the plan of the "Club" to continue this awarding of trophies again in 1940 with three other counties to be selected.

During horse day at the 1940 Farm and Home Week at Cornell University the New York State Draft Horse Club will honor the County Club which has done the most during 1939 to foster improved horse breeding in their county. Following the luncheon on Friday of Farm and Home Week a silver loving cup will be presented to the President of the club winning the county club contest.

This contest is divided into 10 parts for which credit is given for activity of the local club. These include: 1. Publicity; 2. County Fair activity; 3. State Fair activity; 4. Local horse breeding promotional work; 5. Club membership; 6. Number of foals; 7. Type of County Fair premium list; 8. Most Improvement in County Fair premium lists; 9. Percentage of purebred stallions in the county; 10. 4-H Club activity.

The counties now having horse clubs include St. Lawrence, Tioga, Onondaga, Schoharie and Wayne.

The officers of the New York State Draft Horse Club are: President, Dr. R. M. Sears; Vice-President, Arthur Horton, Johnson City; Sec.-Treas., Morton Adams, Sodus; Directors, Mrs. Max Dreyfus, Brewster; Donald W. Taylor, DeKalb Junction, and Robert M. Watt, Ithaca.

"Such cruelty, Miss Twiddle; the man should be ashamed!"

HIGH MILK PRODUCTION

Maintained

OVER LONGER PERIODS!

This Famous
AYRSHIRE HERD
makes high 3-Year Record on
BEACON Test
Cow **RATION**

Penshurst Charming Elma #134534—the world's youngest Ayrshire Cow to qualify for the 100,000 lb. club at 8 years, 8 months, 25 days. The present lactation will be her highest. In 327 days she has 19,007 lbs. of milk and is still milking over 40 lbs. daily.

Photo shows part of Iroquois Herd at Cooperstown, New York. This herd uses Beacon Rations exclusively.

The proof of a dairy ration is in the results you get over a long period. And that goes for Beacon Test Cow Ration. Introduced in 1936, this ration has proved that it not only helps secure maximum production, but it also helps *maintain* high production during the entire lactation period.

Iroquois Herd, of Cooperstown, New York—with George Jackson as herdsman—has proved it. Mr. Jackson was one of many progressive dairymen to put his herd on Beacon Test Cow Ration 3 years ago.

During this period, his herd has made the following outstanding record:

Year	Milk lbs.	Fat lbs.	Test %	No. of Cows
1936-7	10,436	425.03	4.07	26
1937-8	9,738	412.46	4.24	21
1938-9	10,671	450.33	4.22	26

All but one animal in present milking herd has been bred on the farm.

The reason that Beacon Test Cow Ration helped Mr. Jackson, and many other dairymen, to reach new

highs in milk production over longer periods is because it was developed especially for this purpose. Many different formulas were studied in different herds for a number of years before Beacon Test Cow Ration was put on the market.

The result is a ration which meets the most critical demands of feeding: (1) It is extremely palatable, bulky and safe, (2) It is high in fat content—4 $\frac{3}{4}$ %, and, (3) It is low in fibre—less than 9%. This combination of high fat and low fibre results in a ration *high* in total digestible nutrients. That is why it is especially valuable for *quality dairy herds*.

Investigate the many advantages of Beacon Test Cow Ration. Give it a *trial* under your own conditions on your own herd. And notice how it helps you to **MAINTAIN** high milk production over longer periods.

Crop-Growing Hints

"Starter" for Transplants

VEGETABLE growers are definitely interested in the use of so-called "starter solutions" of fertilizer used in the water applied when transplanting vegetables. Careful tests have shown that plant food applied in this way gives the plants a big boost and that the crop is increased far more than by applying an equal amount of fertilizer in other ways.

One starter solution frequently used is made by dissolving 2½ lbs. of ammonophos and 1¼ lbs. of nitrate of potash in each fifty gallons of water. These chemicals can be purchased ready mixed in these proportions.

Good results have been shown where such a solution is used, even though a complete fertilizer is also applied quite close to newly set plants. It has been predicted that the use of this starter solution will become quite universal among growers of cabbage, tomatoes and similar crops within a relatively short time.

Look to Your Meadows

In areas which suffered from dry weather last summer, the condition of meadows for next year's hay crop is a question and a serious one. If emergency hay seedings were put in last fall, it is important to cover those seedings with a good coat of manure this winter. Incidentally, no method of handling manure has ever been found that will result in less loss of plant food than drawing from the barn each day and spreading it on the field.

After the new seeding is covered, old meadows deserve consideration next, even to the point of robbing the corn crop of manure commonly put there.

It has also been stated that where a hay crop is likely to be short, the cheapest way to buy hay is fertilizer in the form of a readily available nitrogen carrier applied to the meadow early in the spring.

For the Farm Woodlot

The weather we have been having recently is not conducive to spring plans. Nevertheless, spring is not far away. The inclusion of reforestation in the Agricultural Conservation Program will certainly turn the thoughts of many farmers toward planting a few trees. For 1940 there is an additional conservation allowance of \$30.00 for planting trees at the rate of at least 1,000 per acre. This will allow the planting of approximately four acres.

In New York State trees are available from the Conservation Department, Albany, N. Y.; and if you are planning to set any, we suggest that you get an order blank from the Department and put in your order now.

You do not need to pay for them until shortly before they are shipped, some time in April or early May.

By the way, if you want a good farm woodlot, fence out the cows.

* * *

Inoculate Legumes

Ten years ago the quality of commercial legume inoculants varied greatly; some were good and some were useless. Since most states have been requiring some official testing of these inoculants, the situation has been greatly improved; and you can now buy any one of a dozen inoculants with confidence. Not only that, but the production of these commercial inoculants has more than doubled in the last ten years, while at the same time prices have been reduced considerably.

Tests have shown that inoculating legume seed greatly increases the crop where the inoculating bacteria are not present in the soil, and usually gives a profitable increase even though they are present. The cost is small, and the use of inoculants with all legumes is good insurance.

* * *

"The Sower Went Forth"

The use of poor seed is a handicap which no amount of fertilizer or care can correct. In general, state laws require the tagging of seed with certain information to guide the purchaser. Usually these laws do not prohibit the sale of poor seed; it is up to the purchaser to read the tag and draw his own conclusions. Common information given includes the variety name, the percentage of weed seeds, the germination test and the date it was made.

An evangelist for better seed is M. T. Munn of the New York State Agri-

"Look at the funny shadows we make. That one looks like old funny-face, the game warden."

Drugs for New Plant Varieties

The use of a drug called colchicine to produce changes in plants, resulting in new strains or new varieties of farm crops, is a thrilling story. The process is technical and of interest to farmers only through the results that may be secured. Already there have been produced in the flower world marigolds of greatly increased size; also a barley with grains about twice normal size; and medicinal herbs with odor much stronger than normal.

It is impossible to predict the benefits that may come to agriculture from this new method of plant improvement, but the possibilities are startling.

Grange Gleanings

(Continued from Page 2)

all the energies of the Grange will be thrown into its accomplishment.

* * *

VERMONT'S State Master Henry A. Stoddard recently made quite an installation record when he installed simultaneously at Randolph the officers of seven subordinate Granges. A large hall was made available, beautifully decorated, and Grange officers and members came from a wide area to witness the ceremony, which was greatly enhanced by impressive tableaux and musical accessories. Mrs. Stoddard assisted her husband in the unique ceremony and the subordinate Granges whose officers were thus installed were West Randolph, Roxbury, Brookfield, Rochester, Bethel, East Bethel and North Randolph. Three of the new masters installed were women.

* * *

IN MASSACHUSETTS a group of state-wide officers' conferences is now in progress, which started January 29 and will continue until late in February. The State Master, Lecturer and Secretary attend all these meetings and preside over sectional conferences of their respective subordinates.

* * *

CENTRAL POMONA in Connecticut has done remarkably fine work of late, through its various subordinates, in the collection of handmade dolls, scrap books and toys, which in total made a sizable collection—all turned over as Christmas gifts for the crippled children in the Shriners' Hospital at Springfield, Mass. No one will ever know how much joy was brought to the little shut-ins through this Grange ministry, and it is right along the line of the great work done in Connecticut Granges the past year in the collection of used tinfoil, whose proceeds all went toward the support of the Shriners' Hospital.

* * *

THE HOME AND COMMUNITY Welfare committee of West Baldwin Grange in Maine has recently done a fine piece of community service by purchasing several First Aid kits and placing one of these in each of the public schools within its jurisdiction. In many other directions the Granges of Maine are cooperating with the schools, and in consequence a fine spirit of interest in the children's welfare has been promoted.

I'm Hungry For Nitrogen!

Urea Nitrogen
Won't Let Your
Trees Starve!

Don't let your apple trees develop these nitrogen-starvation symptoms

TERMINAL GROWTH of young trees will show yellowish-green leaves and reddish petioles. Leaves small and reddish. Current stem and twig growth short and slender. Roots slender and yellowish.

Turn Hungry Trees into Profitable Trees with Urea Nitrogen

Fruit trees require liberal applications of nitrogen. In many areas and under many conditions, they also need phosphoric acid and potash. If they don't get the right amounts of plant food, they soon

develop starvation symptoms and become unprofitable.

Keep trees healthy and productive with the help of urea. Whether applied in "URAMON" (42% Urea Nitrogen) or in mixed fertilizers, UREA is an excellent form of nitrogen for fruit trees. It is completely available, leaching resistant and leaves no harmful residues. Urea nitrogen not only helps keep trees healthy, strong and productive... it also rebuilds rundown trees that show signs of nitrogen starvation. Write for fruit tree leaflet. E. I. du Pont de Nemours & Co. (Inc.), Ammonia Department, Wilmington, Delaware.

Milk Market News

December Price---Problem of Overproduction

PRODUCERS in the New York metropolitan milk marketing area were paid a base price of \$2.16 for December milk. This was for milk testing 3.5 per cent butterfat at the 201-210 mile zone from New York City.

Volume of milk for December was about 36,500,000 pounds greater than it was for November, and over 58,000,000 pounds greater than it was in December the year before. This increased production resulted in a decrease in the percentage of milk in Class I, which accounts for a drop of 12 cents in the price of December milk as compared with that for November.

This increase in production because of better milk prices is worrying all thinking dairymen. No marketing plan will keep prices up when there is far more fluid milk than can be sold. Farmers are keeping even their poor cows, and are feeding more and giving better care to all their stock. The average price received by farmers for milk cows in 1939 was the highest since 1930.

Speaking on this subject of milk marketing at the annual meeting of the New York State Agricultural Society on January 17, Governor Lehman said:

"The future of our entire agriculture many depend upon the solution of this question of voluntary regulation of milk production through cooperative effort."

Commissioner Holton V. Noyes, at the same meeting, emphasized the need of "the application of the best cooperative thought to the question of controlling production."

That is right. Cooperative effort is the way to control production. But how? The milk marketing agreement is really a surplus plan. It always operates just like it did with the December price. If there is too much milk in Class I, it goes into the lower priced classes, and farmers get a lower price. The trouble is that most farmers don't realize this. Everyone has a personal responsibility not to increase production beyond his usual average.

All agree that something has got to be done to keep fluid milk production within bounds. What is your suggestion?

* * *

Amendments Would Insure Better Spring Milk Prices

IN ORDER to do everything possible to guard against the big slump in milk prices next spring when the large surplus comes, the Metropolitan Cooperative Milk Producers' Bargaining Agency of Syracuse has petitioned the Federal and State Departments of Agriculture for three new amendments to the marketing agreements. These are:

AMENDMENT NO. I

This asks for a provision which would make possible a rise in price of Class I or fluid milk effective May 1. Under the present milk marketing Order, the price for May would figure at \$2 a hundred, or a little over, for fluid milk. The change would be made by repealing the present butter schedule as a basis of figuring the Class I price and putting it on the basis of evaporated milk price. Because evaporated milk sells higher than butter, this would ensure a higher Class I price.

The Bargaining Agency is also asking to have the marketing agreements include a provision against any possi-

ble decline in Class I price below \$2.49 per hundredweight, before April 1, 1941. This would keep the milk prices up even though there might be an extensive decline in general commodity prices due to the ending of the war.

AMENDMENT NO. II

This amendment, if approved, would so price skim milk as to add about 28c per hundredweight to all milk manufactured into cream and butter products.

AMENDMENT NO. III

This would provide for weekly payments by dealers to the Market Administrator to accumulate funds against the final monthly payments. This would prevent dealers from using farmers' money for price-cutting, and would also make doubly sure the paying of their monthly pool prices.

If the Order is continued, and if these amendments are approved, there will not be any such decline in prices as farmers experienced last year.

The continuance of this sound and constructive marketing program depends upon the support it receives from the dairymen themselves, and their refusal to be led astray by crackpots, some dealers, and would-be farm leaders with Communist support and leanings.

* * *

Dairymen Oppose Changes in Milk Grades

THE whole milk industry again has been upset by the announcement by the Board of Health in New York City that after September I Grade A milk will be abolished. This was followed a few days later by a speech on the subject of milk grades by New York City's bombastic Mayor LaGuardia, trying to make capital with milk consumers by claiming that Grade B milk is just as good as Grade A, and that the elimination of Grade A would save consumers millions of dollars annually.

Grade A milk for New York City is produced by some 5,000 dairymen from scrupulously inspected Grade A herds on special Grade A farms, with special equipment. It contains more butterfat, less bacteria, is more frequently checked, and is processed in separate Grade A plants. When delivered to the consumer it is sealed with an over-all cap, and is delivered in faster time than Grade B.

Grade B milk is a safe, high quality milk, but produced under less restrictions and at a lower cost of production than Grade A.

Both of these grades were set up by

"Gentlemen! Gentlemen! My name's SMITH, the umpire—not LYNCH!"

the city Health authorities themselves, certainly not by the farmers. But after they have been set up and thousands of farmers have spent large sums for special equipment, it is unfair to farmers to destroy this additional income amounting to some \$3,500,000 a year.

The elimination of Grade A is of equal importance to Grade B producers, because it will no doubt be the policy of the health authorities to put many of the same restrictions on the production of Grade B as is now required for Grade A. In fact, the announcement comes at the same time as another announcement of the city Board of Health setting up new regulations for Grade B. For example, these new regulations require that the sides and ends of trucks used in transporting milk cans shall be at least 6 inches higher than the tops of the covers. Charles H. Baldwin, of the Metropolitan Cooperative Milk Producers' Bargaining Agency, in a statement, wonders whether the Mayor of New York ever tried to lift a hundred pound can of milk over the side of a truck to the loading platform at a milk station. Under this new regulation he would in some cases have to lift it as high as his head. Many farmers haul their own milk in the same car which they use to drive to church. One of the new truck regulations would force these farmers either to buy a new car or hire a hauler whose machine has been made to comply with the new rules.

New regulations also will require farmers to keep their milk at lower temperature. That means more cost.

It would look as if the Mayor wants to eliminate Grade A milk, impose additional regulations and costs on farmers, and at the same time provide consumers with a higher grade of milk at the Grade B price.

Ever since farmers have been producing milk for the cities, the consumers, represented by the health authorities and by politicians, have continued to place more and more regulations on the production of milk. In the same breath the city politicians complain bitterly and start investigation after investigation on the high costs of milk. These regulations in many instances have been impractical to the point of foolishness, and they have

been enforced too many times by young city inspectors who knew little and cared less about actual practical dairying and milk production.

Farmers have always been willing to conform to any reasonable regulation. Of course they want to produce good milk. But the consumer must expect that more and more regulations mean more and more cost on the milk.

Fortunately, farmers are better organized than they used to be, and the Mayor can rest assured that he is not going to get away with taking millions of dollars out of dairymen's income and greatly increasing their costs, without a fight.

* * *

League Holds Series of Large Meetings

SPEAKING at a large meeting of Dairymen at Ithaca, New York, on January 24, Fred H. Sexauer, President of the Dairymen's League Cooperative Association, said:

"If we are to obtain a living price for milk we must have the power and strength that thousands of farmers bound together in confidence, loyalty, and commonsense, possess. We must have a plan based upon the experience of years in dealing with this marketing problem, and we must have legislation soundly conceived and adequately administered.

"The Federal-State marketing agreements," said Mr. Sexauer, "have worked beyond the expectations of Washington and Albany, and far beyond the expectation of distributors. For the first time the distributors found themselves where they could not throw their losses back on the farmers. They waged a long and costly legal battle to destroy these marketing agreements, a battle that was not concluded until the United States Supreme Court ruled in favor of dairymen. ****

"No man's opinion can become the dominating viewpoint of an organization such as the Dairymen's League," continued Mr. Sexauer. "No small group can control it. The viewpoint of this organization must be the viewpoint of the majority of its membership. The composite thinking and opinion of the 30,000 farm families become the thinking and opinion of the League itself."

The meeting at Ithaca was one of 24 meetings held recently in the 24 League districts of the New York milk shed. Both members of the organization and other dairymen were invited. The average attendance at these 24 meetings has run from 300 to 1200 dairymen, so that a total of nearly 15,000 farmers have come together to discuss dairy problems and to study the Federal-State marketing agreements, to which they again gave almost unanimous approval.

Following these general district meetings of the League, there will be a series of local meetings, so that everyone will have an opportunity to understand what the Federal-State marketing agreements are doing for them.

The Only Milker With Which BOTH Cow and User are COMPLETELY SATISFIED!

The world's best and fastest milker. Has many new features and improvements.

The New DE LAVAL MAGNETIC SPEEDWAY MILKER

THAT'S the simple but important fact. Now that a perfect milker is obtainable, why be satisfied with anything less?

The new De Laval Magnetic Speedway costs but little more than other milkers and will save the cost difference many times over while you are paying for it.

Why not see your De Laval Dealer or mail coupon to nearest De Laval office shown below?

De Laval Milk and Separator are sold on such liberal monthly installments that they pay for themselves while being used.

WHEN I TRY TO BALANCE MY FEED COSTS AGAINST MY MILK CHECK EACH MONTH, I KNOW WHAT A MANUFACTURER WITH A STRIKE ON HIS HANDS FEELS LIKE.

I KNOW WHAT YOU MEAN — BUT THERE IS NO "SLOW-DOWN" IN MY DAIRY, I ADD KOW-KARE TO HELP MY COWS DIGEST AND USE ALL THE GOOD OF THEIR FEED. IT PAYS!

WHEN COWS GO ON A SLOW-DOWN STRIKE

In winter, just when feeding costs are highest, some of your cows are apt to go on strike. And no strike is more ruinous to profits than sluggish milk yield... because the slow-down usually forecasts costly health troubles ahead. Fact is, most cows on winter feed have agrievance. Lack of fresh air, sunlight, exercise and succulent pasturage, puts an unfair burden on digestion and assimilation. To keep up production and maintain resistance to disease, medicinal support for the over-worked organs is common-sense insurance.

Add KOW-KARE to the Feed

KOW-KARE is not a feed; it is a feed supplement designed to promote more efficient conversion of the rich, dry winter grains and roughage. It is a scientific compound of iron, iodine and carefully chosen medicinal herbs and roots known to medicine as Tonic, Stomachic, Carminative, Laxative, Alterative, Stimulant and Mineral Replacement. Thousands of cow owners find it is good business to mix KOW-KARE with the feed throughout the winter and before and during calving.

KOW-KARE is sold by feed dealers, general stores and druggists, or by mail postpaid for \$1.25 (large) or 65¢ (medium). Full directions on package. Write today for Free 32-page treatise on cow ailments, "Home Help for Dairy Cows."

DAIRY ASSOCIATION CO., INC.
DEPT. 12. LYNDONVILLE, VT.

"The Federal-State Milk Marketing order is working satisfactorily . . ."

GOVERNOR LEHMAN

Said the State's Chief Executive: "The Federal-State Milk Marketing order, strengthened by United States Supreme Court approval, is working satisfactorily." In short, Governor Lehman tells the farmers: "You are doing a good job running the dairy business."

Good, But Not Enough » » »

In our quarter-century battle for A LIVING PRICE FOR MILK, we have fought for—and secured—rights for all dairy farmers in the milkshed. We have legally kept surplus milk from breaking the fluid market. We have secured the right of farm organizations to work together in protecting their industry. We have promoted happiness and well being in thousands of dairy homes.

But » » » We must jealously guard this machine which the Federal and State order has given us—and which the Governor says is working satisfactorily. We must be on the alert against enemy SNIPERS who would weaken the order or create dissension among our own ranks. We must examine every attack against the order and determine for ourselves if it merely hides a plot to weaken the order. We must be suspicious of all those who say: "I could pay you more if

it were not for the order" The answer to that is, "Oh, yeah! Well, *why didn't you* pay us more when there was *no* order?"

Today farmers and farm organizations are not likely to be fooled by propaganda or resistance. We are well on our way to solving the milk problem. Let's hold fast to what we have. Let's do whatever we can to help strengthen all cooperatives. Let's help in every way we can to build more unity among farmers and closer working relation among legitimate cooperatives. For it has been the leadership of legitimate farm cooperatives which has won the farmer his present rights. And it will be the leadership of those cooperatives which will resist all effort to take away these rights or weaken the farmer's position.

The Dairymen's League pledges its wholehearted effort to help keep the Federal and State orders working in the interest of all dairy farmers, and we welcome the growing support from business men throughout the state.

THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

NORTHEASTERN *Slants* ON THE *National* NEWS

Congress Begins to Economize

SOMETHING new in Washington is the current Congressional economy drive. Both House and Senate appropriations committees are using the axe on President Roosevelt's budget estimates for next fiscal year, which total \$8,424,000,000. First saving voted by House was cut of \$94,500,000 in sum asked for Independent Offices Supply Bill, which if confirmed by Senate, will leave high and dry without funds three agencies established by President—National Resources Planning Board, Office of Government Reports, and Council of Personal Administration.

Next, House appropriations cut 7 millions from budget estimates for Defense Deficiency Bill. Senate committee slashed the bill another 13 millions. More cuts are expected, as Congress has to choose between economizing or raising new taxes in election year, or increasing national debt limit above 45 billions.

SLANT: It will come hard for the New Deal to have to stop spending, after having spent since 1932 more than half as much money as all the previous administrations in the 150 years since George Washington took office.

Unfair Labor Ruling Against Farmers

FEDERAL Circuit Court of Appeals in San Francisco has backed up an unfair National Labor Relations Board ruling against a California citrus growers' cooperative. According to ruling, persons engaged in processing farm products in factories off the farms where the products are grown are industrial employees, instead of farm workers. In this particular case, it didn't make any difference to Labor Board, or to the Court, that the factory was a cooperative one owned by a group of California farmers, and that the grading and packing done in it was merely a centralization of work formerly done on their individual farms.

SLANT: This ruling means that a cooperative plant, processing a perishable product like canned peas, might have a strike on its hands, supported by government, at a time when it would ruin every farmer growing peas for it. When National Labor Relations Act was passed, Congress exempted farm labor, but left it to Labor Board to define "farm labor". Since then, labor unions have sought to get a hold on agriculture wherever possible, and have been upheld by Labor Board. Remember what happened to Cooperative G.L.F. Bean Growers' Association, at Batavia, N. Y., a year ago last summer? This California case is the same thing all over again, and proves that there must be no let up in the fight to get clarifying amendments to the Labor Act, which will prevent such unfair rulings in the future.

Plotters Caught by G-Men

SEVENTEEN men, with average age of 29 years, were arraigned recently in a New York City court, charged by federal G-Men with a plot to overthrow U. S. government and to set up

dictatorship on Hitler model. Their first aims were said to be a campaign of terror against Jews, and bombing of two New York newspapers, the Jewish Daily Forward and the Communist Party's Daily Worker. Then, when more members could be recruited, they planned to blast bridges, seize power plants, docks, railway terminals and Federal Reserve Bank, after which the government was to have been seized.

The plotters, most of whom are U. S. citizens, were charged with having laid up a store of ammunition, some of it stolen from New York National Guard units. One of ringleaders, William Gerald Bishop, is said to have been born in Austria, and to have entered U. S. illegally, after being three times deported from Belgium and Holland.

SLANT: "It took only 23 men to overthrow Russia," remarked G-man J. Edgar Hoover, on hearing the plot pooh-poohed by some people who apparently thought that 17 misguided young men couldn't do much damage to a great country like the United States. We think that Mr. Hoover is thinking straight, and that the country should appreciate the fine work the Federal Bureau of Investigation is doing in rounding up trouble-makers.

Dies Committee Continued

Last week, House of Representatives voted 345 to 21 to continue work of Dies Committee, which has also been active in putting a finger on persons engaged in un-American activities.

A Great Statesman Has Gone

SENATOR BORAH, who died in Washington on January 20 at the age of 74, was nationally and internationally known as the most famous senator of his time, and justly so. His enemies classed him as an "aginner," or "the great oppositionist." His friends often called him "The Lion of Idaho." If he was an "aginner", he opposed only the things that he thought were wrong. He was a deadly foe of monopoly, and the leader in America against entanglement in European affairs. A Republican, but thoroughly independent, he never put party or personal gain above what he thought was right.

SLANT: Americans who believe in maintaining the principles that made this country what it is have lost a great friend and leader with the death of Borah. His last speech—and he was one of the best speakers of his time—was on the Bill of Rights (see box on this page).

Britain Too High-Handed

TO STRONG protest from our State Department, British replied recently that they are going to continue to stop and search our mails on the seas.

SLANT: Such high-handed proceedings remind Americans, who remember their history, of the War of 1812. America declared war then because of Great Britain's insistence on stopping and searching, and sometimes seizing, United States vessels and property. Americans are, in general, sympathetic toward British in their present war against aggression, but that sympathy largely vanishes when British themselves practice aggression. When some

A Sacred Document

IN HIS LAST SPEECH, made just before his death, Senator William E. Borah, America's greatest senator of recent times, quoted a traveller here from a European dictator country, as saying that before any progress could be made in breaking down American institutions, a way must be found to discredit the American Bill of Rights. Then Borah continued:

"I have said that this Bill of Rights is a sacred document. If human liberty is sacred, this document is sacred!"

To show you how right Borah was, and to refresh your memory, read the following summary of the first ten amendments to the United States Constitution, known as the Bill of Rights. Bear in mind that the makers of the Constitution has seen so much trouble from the oppression of kings and bad governments, that they were not satisfied even with the Constitution itself, and they added this Bill of Rights to make doubly sure. Are we citizens of America today just as sure that we are doing everything we can to preserve these Rights? Here they are in shortened form:

I. Absolute freedom of religion, speech, and the press, with the right to gather at meetings and to petition.

II. Right to keep and bear arms.

III. No quartering of soldiers in times of peace in homes without consent of owner, nor in time of war except in a manner to be prescribed by law.

IV. Right of people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures.

V. Protection of persons and their property.

No person shall be held for capital or otherwise infamous crime without presentment of indictment of a grand jury nor otherwise be put in jeopardy of life or limb, nor compelled to be a witness against himself, nor deprived of life, liberty, or property without due process of law. Nor shall private property be taken for public use without just compensation.

VI. Rights of Persons accused of crime.

Persons accused of crime shall enjoy right to speedy public trial by an impartial jury of the state and district wherein the crime shall have been committed. He shall be informed of the nature and cause of the accusation, confronted with witnesses against him, and have compulsory process for obtaining witnesses in his favor, and have the assistance of counsel for his defense.

VII. Right of Trial by Jury in Suits at Common Law.

Where value in controversy shall not exceed \$20, right of trial by jury shall be preserved.

VIII. Provides protection against excessive bail and punishments.

IX. The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

X. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people. (The United States has no power to do anything except what you, the people, give it. *Don't give too much*).

This is the Bill of Rights. Senator Borah said it is sacred. Let us keep it so!

of us get too sympathetic and think that United States should get in the war, we need to remember that Britain took the lead in repudiating her war debts to us, and that she and France gave America little or no credit for helping to win the World War.

War News

BELGIUM and Holland had another severe scare during fortnight, as heavy concentrations of German troops along their borders led to more rumors that Hitler was planning to make them a stepping stone to a big attack on France and Britain. Almost complete mobilization and evacuation of Belgium villages on German border were ordered, but so far Germany has made no further move in that direction.

Finland's Resistance Holds

Russian forces last week continued their violent attacks on the Karelian Isthmus and along Finland's southeastern frontier, but were reported to have been repeatedly repulsed with heavy losses by the Finns. They were also forced to retreat in Finnish Lapland sector, where temperatures dropped so low that special alcohol thermometers had to be used to record them (mercury freezes at 38° below zero). Finland's ability to hold out after her comparatively small army and supply of munitions is exhausted, and after she loses her two best allies—General Winter and Spring thaw—will depend on whether she can get outside help. President Roosevelt has proposed to Congress a Finnish loan, but there is considerable Congressional

opposition to it because of fear that such a policy might drag us into war, and also because Congress is hard up.

Set-Back for Japan

On Jan. 26, Japanese-American trade treaty was allowed to expire, in accordance with six-months' notice which United States served on Japan last summer because of her violation of American rights in China. United States has refused Japan's request for new treaty unless she has a change of heart. While trade may go on as usual, it can now be cut off at a moment's notice, should there be any new interference by Japan with American rights. As this country is Japan's chief source of vital products at present, and also her best silk customer, this would mean economic disaster for the Japs.

"Comrade" Browder Convicted

LAST WEEK a former candidate for the Presidency of the United States, Communist Earl Browder, got four years—but not in the White House. Browder received a sentence of four years in a Federal penitentiary and a fine of \$2,000 after being convicted of using an American passport fraudulently obtained. Evidence showed that he had traveled four times on passports obtained by false statements.

Although convicted, Browder was allowed to leave the court on \$7,500 bail, pending his appeal for a new trial. Meantime, New York City Communists are busy pushing Browder as a candidate for the House of Representatives in the 14th Congressional District.

from SKEFF'S NOTEBOOK

By L. B. SKEFFINGTON

New York Agricultural Society Meets

"WE RECOMMEND that no material changes be made by the Legislature in the Rogers-Allen Act, and that the principles of such act which permit cooperation between dairymen to maintain orderly marketing of their products be the established policy of the state." So declared the New York State Agricultural Society at its 108th annual meeting in Albany.

The society "heartily commended" officials who have aided in carrying out policies authorized by the act and advocated "cooperative effort by farmers in the solution of farm problems."

Halsey B. Knapp, director of the State Institute of Applied Agriculture at Farmingdale, L. I., was reelected president.

Vice-Presidents include Leigh Kirkland, Fredonia; Van C. Whittemore, Canton; E. J. Walrath, Evans Mills; Harry Bull, Campbell Hall; Walter G. Emerick, Watervleit; Lawrence Howard, Kinderhook; George E. Bates, Albany; Earl B. Clark, North Norwich, and H. L. Creel, Homer.

Perley M. Eastman and Webster J. Birdsall, both of Albany, were re-elected secretary and treasurer, respectively. Mrs. H. M. Wagenblass of Warsaw was named to the executive committee. Members who carry over are Jared Van Wagenen, Jr., Lawersville; H. M. Stanley, Skaneateles; H. P. King, Trumansburg; and Oscar F. Kinney, North Chatham.

Ask Better Market Reports

The society called attention to effect of budgetary cuts in reducing market news service last year and by resolution urged that this important service be expanded rather than curtailed.

Continuance of milk publicity was favored.

A resolution adopted and directed to be sent to the mayor and health commissioner of New York City urged continuance of two grades of milk. It recited that producers of Grade A milk had incurred large investments, and that Grade B producers will be placed under additional expense if they are forced to produce one grade.

A recommendation was made by the resolutions committee that the next annual meeting of the society devote itself to analysis of the methods, facilities and needs of marketing New York State farm produce. It was suggested that better marketing offers a most profitable field for exploration because of the proximity of the great consuming centers.

"A stagnant or backward agriculture is a liability to the state," recited a resolution urging that adequate funds be provided for continuance and expansion of a sound program of research. It said that many of agriculture's problems have been solved by research, and that the need continues for uninterrupted research at the various state colleges and experiment stations.

Because the state colleges, experiment stations, secondary schools of agriculture, as well as all vocational agricultural activities in schools of the state are under direct control of the Board of Regents, the society requested the Legislature to give agriculture representation on the board.

The report of a special committee, which was approved, urged that funds be provided for a historical pageant of agriculture to celebrate the centennial of the State Fair.

Century Farms Listed

At the annual dinner Governor Lehman presented Century Farmer citations to families which had been on the same farms for a century or more. Citations went to Mr. and Mrs. Edward Barber, Westport; Wynter Burdick, Greenwich; John L. Lounsbury, Barton; Howard H. Utter, Geneva; the Vernon Wells and the Kenneth Wells families, Suffolk County, L. I.

Horticultural Society President Sends Strong Message to Kingston Meeting

From his sickbed, J. Wessel TenBroeck, Jr., of Hudson, president of the New York State Horticultural Society, addressed one of the most forceful messages which has been received by the society in a long time. It was read at the Kingston meeting by Vice-President Theodore Oxholm of Esopus.

Discussing the problems facing the growers, TenBroeck said: "There has been a tendency to 'let George do it.' This places too great a responsibility upon the relatively few men who head farm organizations, who, after all, are not seers and whose judgment may not be perfect. Their ability to do good depends upon the strength of their organization and the influence which is brought to bear for or against certain policies."

TenBroeck deplored the tendency upon the part of the state to limit funds for research and education and for proper interpretation of the results of research. "If such a policy is continued," he said, "New York State Agriculture soon will be extinguished."

He said the subject of legislation is a delicate one because it requires clear thinking to separate the good from the bad. "Too many laws have been passed which on the surface seemed desirable, or at least harmless," he said, "but which have later proved boomerangs. Some have been turned to uses for which at their inception they were not intended. Again too many laws have been initiated by individuals purporting to benefit fruit growers, which the large majority of growers neither wanted nor approved."

"Requests for appropriations for research and education have been ignored on the basis of economy, while other appropriations have passed without a quibble."

TenBroeck in outlining a basis for successful marketing said that the solution of this problem lies primarily with the growers themselves. He urged support for the New York and New England Apple Institute, "which has done more for northeastern apple growers than many of them realize."

* * *

To Standardize Apple Box

One of the matters of serious debate before apple growers is the need to standardize the apple box and other packages. There are so many kinds of boxes now in use that both buyers and sellers at times appear confused. There are instances where sales have been made conditional upon use of a certain kind of box, and shippers either had to rebox or lose the sale. The State Horticultural Society has requested that this be a first matter of consideration by the Joint Fruit Committee which it has set up in conjunction with the State Farm Bureau Federation.

Herman Kappel of Covert Orchards, who has made a study of the subject, was requested by the society to present

Rochester Milk Price \$2.43

Equalized price for the first month under the state milk marketing order for the Rochester market was announced at \$2.45, less two cents for administration. L. L. Clough, administrator, said that dealers generally had filed their reports promptly and that the order was working fairly smoothly in its first month.

The \$2.43 represents a considerable advance to most dairymen over November checks. The order went into effect Dec. 1. Prices paid by the various cooperatives in the market for November milk ranged from around \$2 to \$2.25.

* * *

Milk Production Control

One phase of the milk problem was touched upon by Commissioner H. V. Noyes before the State Agricultural Society in a review of statistics of his department for the past three decades. In 1909, total income of New York farmers from dairying was 78 million dollars and income from all other farm products was 208 millions. Indications are that total farm income for 1939 will figure about 312 millions, he said, about evenly divided between dairy products on one hand and all other farm products on the other.

The commissioner said this points to the need of diversifying farm income as much as possible, although in many instances it is difficult to offer specific advice.

Governor Lehman told the society that the time had come when farmers must take some action cooperatively to see that the production of milk does not become so great that it will destroy the benefits now being obtained under a program of orderly marketing.

Master Farmer Judges Meet

The Annual Meeting of the New York State Master Farmer Judges was held at the DeWitt Clinton Hotel in Albany on January 16. At that time four new Master Farmers were chosen to be honored, with their wives, at the Master Farmer Banquet at Willard Straight Hall, Cornell University, Ithaca, N. Y., on February 15 of Farm and Home Week. Governor Herbert H. Lehman will make the awards.

At the same meeting in Albany, eight farm boys and girls were selected as winners of American Agriculturist Achievement Awards, which will

also be presented at the Master Farmer Banquet.

Nominations are now in order for Master Farmers for 1940. All that is necessary is to drop a letter or post card to American Agriculturist, P. O. Box 367, Ithaca, N. Y. Master Farmers are chosen for outstanding success in farming. However, in addition to being a successful farmer, it is necessary to have an outstanding record for community service. This honor is seldom given to men who are less than fifty years old.

Hereford Breeders to Meet at Farmers' Week, Feb. 13

A group of Hereford breeders are meeting at Ithaca on February 13. This is Beef Cattle Day at Farm and Home Week—a day when all good beef cattle men like to get together and discuss their problems of feeding, breeding and marketing.

A banquet is again being held at noon under the auspices of the New York State beef cattle breed societies, at which many interesting speakers will be heard. At 4 o'clock that afternoon the Hereford breeders have called a meeting to discuss a proposed sale of Hereford breeding stock, to be held in late May or early June. At this writing Cornell University have already set aside three fine Hereford animals which will be offered to the public at auction. The Gage Stock Farms of Delanson, N. Y., have selected 10 Polled Herefords which are going to be consigned to this sale. It is also expected that W. J. Hamilton of Jamesville, N. Y., and Walter W. Fisk of Wolcott, N. Y., will have large entries, as well as many other breeders.

The President of the New York Hereford Breeders Association urges that all Hereford breeders in the state who are interested attend this meeting and avail themselves of this opportunity of meeting their fellow breeders and expressing their views.

A. M. Loomis

A. M. Loomis, for many years Washington representative of several dairy and agricultural organizations, died in Washington on January 3.

Until he resigned on January 1 because of ill health, Mr. Loomis was Secretary of the National Dairy Union. He played an important part in enactment of legislation designed to control importation into this country of foreign fats and oils.

FREE! A NEW KIND OF BARGAIN CATALOG

Jim Brown

My Biggest and Best Catalog in 51 Years 260 Pages of Money-Saving Bargains

For half a century the name of Jim Brown has stood for the lowest prices and highest quality in fencing, barb wire, steel posts, steel gates and other fencing equipment. Now in addition to the products of my own four big fencing and metal roofing factories, my catalog contains amazing money-saving bargains in hundreds of other articles used in the home or on the farm. My 51 year reputation for fair dealing is your best guarantee of quality, service and satisfaction.

I Pay the Freight and Postage

My catalog quotes DELIVERED prices. You don't have to figure on any freight or postage. You don't have to calculate the weight of any article or guess the distance you are from the shipping point. I pay the FREIGHT and POSTAGE. This is a big convenience to my customers—and a BIG SAVING.

LOOK at the Many Additions to the JIM BROWN Line

Just write your name and address on the attached Jim Brown Post Card, mail it and get my 51st ANNIVERSARY Bargain Catalog. It's the biggest and best bargain book I ever issued. Contains more than 260 pages, more than 1000 bargains. See what I can save you on SHOES, SHIRTS, OVERALLS, HARNESS, WAGONS, BABY CHICKS and POULTRY SUPPLIES. Look at my prices on PIPE, PUMPS, SPRAYERS and TIRES. Let the ladies look at my beautiful line of SILK STOCKINGS, SLIPS, SWEATERS and CHILDREN'S CLOTHING. Look at my DIRECT FROM FACTORY PRICES on FENCING, POSTS, GATES and METAL ROOFING. Send for your copy of my Big New 1940 Bargain Catalog! It's free. Just mail the attached Jim Brown Post Card.

—THE WORLD'S FASTEST MILKER—

SURGE

And Fast Milking DOES Get MORE MILK!

Authorities agree that faster milking *does* get more milk—and **SURGE** is the fastest milker ever built! In addition, **SURGE** milk travels only 4 inches instead of 4 feet from teat to pail. Just 4 pieces of rubber to wash. NO claws. **SURGE** uses rust-proof, easiest-to-clean, everlasting **STAINLESS STEEL** in every metal part touching milk. **SURGE'S** exclusive, Adjustable, Variable Pull feature enables you to do a faster, cleaner, more profitable job with less labor.

SEND THIS CARD TODAY!

ASK Any SURGE USER!

SURGE users have proved during 15 years' experience that they can produce cleaner milk at a lower cost, in half the time of hand milking—and *make more money!* Mail the postcard now for Free Surge Catalog, Easy Terms Offer, name of nearest Surge Dealer.

SURGE
MILK COOLER

--- with **SHROUDED AIR CURRENT!**

The proved superiority of Surge Milk Coolers has come about through an exclusive new cooling principle • **"SHROUDED AIR CURRENT"** which puts every bit of air to work cooling the entire condenser and increasing the efficiency 15 to 20% (explained in our Catalog) • **BIG ICE RESERVE** keeps the cooling water ice cold and cools the milk faster.

• **FACTORY SEALED COMPRESSOR UNIT** comes to you ready to run. Does not require a refrigeration engineer. *Factory-adjusted* for maximum efficiency and can be installed in Factory-Made steel insulated tank or your own insulated concrete tank. Sizes: 2 to 30 can capacity. Learn how easy it is for you to own and operate one. Send postcard now!

The Market Barometer

Storage Holdings of Apples

Out-of-storage movement of apples for December totaled 4,806,000 bushels according to the U. S. Department of Agriculture, compared to 4,249,000 bushels last December and a five-year average for the month of 4,220,000 bushels. Storage holdings on hand January 1 were 384,000 bushels less than a year ago and 1,076,000 bushels below the five-year average.

Following are the cold storage holdings by states:

	Jan. 1, 1940 Tot. Bushels	Jan. 1, 1939 Tot. Bushels
Vermont	135,000	58,000
Connecticut	342,000	277,000
Massachusetts ..	954,000	445,000
New York	5,604,000	4,483,000
New Jersey	641,000	866,000
Pennsylvania..	1,319,000	1,425,000
Ohio	603,000	354,000
Illinois	723,000	677,000
Michigan	875,000	856,000
Virginia	2,915,000	2,735,000
West Virginia..	393,000	350,000
Washington	8,161,000	9,804,000
Oregon	594,000	874,000
California	1,057,000	1,672,000
United States	26,182,000	26,566,000

Relief buying of apples is continuing in several areas. Total relief purchases up to January 13 amounted to 5,835 cars, which was 18 per cent of the total movement by rail to that date.

The Potato Situation in Up-state New York

Up-state New York cities have been good potato markets for the last two weeks of January. Potatoes packed under the State trade mark in pecks have been wholesaling at from 30 to 32c. Other pecked potatoes have been wholesaling at 25c to 27c depending on grade and quality. State trade mark potatoes must pass the federal inspection and show less than 4% defects. They must also be no smaller than 2 inches in diameter and none larger than 14 ounces. Apparently the consuming public is willing to pay more for the extra quality and grade.

U. S. No. 1 Smooth Rurals have been bringing around \$1.40 to \$1.50 on most of the wholesale markets with somewhat less than this paid in some shipping sections. Brushed Katahdins and similar varieties graded 2-inch minimum have been bringing from \$1.60 to \$1.70 to the wholesale market. Here again appearance is a factor in the price of bulk potatoes as in pecks.

Severe cold weather is keeping shipments to a minimum which has had a good effect on the price. Frost damage is frequently reported even on potatoes supposed to be carefully handled.

The stocks-on-hand report issued by the USDA each January will probably be released late in January. This may have a bearing on whether or not the potato market strengthens. Indications are that prices will be good for the next month at least.

Cold Hits Southern Vegetables

Cold weather in southern states, January 18 to 21, caused severe damage to early vegetables. In LOUISIANA, leafy vegetables were severely damaged and young plants were almost a total loss. In MISSISSIPPI, cabbage plants in the fields were killed, but only a small acreage had been transplanted at the time of the freeze. It is stated that the freeze will not affect the final acreage of tomatoes and cabbage in that state. In ALA-

BAMA, cabbage was damaged severely but may not be an entire loss.

In FLORIDA, cabbage was frozen in the northern part of the state. In TEXAS, beets and cabbage in some areas were damaged some, but there was little damage reported to spinach, onions and carrots. Seventy-five per cent of the tomatoes in the lower Rio Grande Valley were reported killed, but most of the acreage will be replanted. Early potatoes there were slightly damaged.

Cold weather will very probably hold back shipments of early onions from the South and strengthen the market for the old crop. Onion prices have strengthened considerably already.

Milk Production Up

The New York daily milk production per dairy has been running about 12 pounds above a year ago, although for the first few days of January the average upward trend was more gradual than a year ago.

Estimates of cold storage holdings of butter on January 13 showed 41,731,000 pounds, as compared to 122,500,000 pounds a year ago.

For the first 11 months of 1939 U. S. production of American cheese was estimated at 492,935,000 lbs., which is a decrease of 7 per cent as compared to the same period in 1938. Compared with the U. S. decrease of 7 per cent, the New York State production of American cheese declined 21 per cent as compared to the first 11 months of 1938.

Onion Stocks Up

Onion stocks in the hands of growers and dealers on January 1, 1940 were 19 per cent larger than on January 1, 1939, according to the Agricultural Marketing Service. A total of 4,077,000 sacks (100 lbs.) is indicated to have been on hand January 1, 1940, compared with 3,419,000 sacks a year earlier. For the 10-year period, 1929-38, holdings on January 1 averaged 3,029,000 sacks.

Total disappearance of the 1939 production to January 1, 1940, was unusually heavy, but not heavy enough to offset the greatly increased production and as a result holdings were the highest on record.

Eastern States.—Holdings, in hundred pound sacks, in Massachusetts and in important competing eastern states are:

	1940	1939	1938
Massachusetts	30,000	73,000	96,000
New York	1,105,000	681,000	720,000
Pennsylvania	3,000	6,000	7,000
Ohio	96,000	69,000	88,000
Michigan	687,000	826,000	599,000
U. S.	4,077,000	3,419,000	3,115,000

Egg Consumption Up

Government report on cold storage holdings of eggs on January 1 was 533,000 cases, 231,000 more than a year ago. During January there was an active demand for storage eggs which, it is estimated, cut holdings to 316,000 cases about the middle of the month. Holdings the first of the year were a little heavier than had been estimated, but combined holdings of case eggs and frozen eggs were only slightly above holdings on January 1 a year ago and were somewhat below the five-year average.

Recent figures show an up-swing in the consumption of eggs, largely as a result of lower retail prices. If egg

prices do not go up too high or too rapidly, consumption should continue good.

The second stabilizing factor has been the weather. Continued cold always cuts production, and the past two weeks have been no exception.

Better prices brought a halt to government purchases of eggs in the Northeast about the middle of January, and resumption of purchases by the Federal Surplus Commodities Corporation will doubtless depend on the market level.

The egg-feed ratio, as reported by the New York State Department of Agriculture and Markets was 9.2 on January 19, showing little change for the past month. A year ago it was 7.3 and two years ago 7.7.

On January 19 top wholesale price for white eggs in New York City was 24½c and a year ago it was 22c.

New York Central Railroad Changes Live Stock Tariffs to Meet New Conditions

To meet truck competition and to make it easier for the live stock shipper to get the benefits of railroad service, the New York Central Railroad has made some interesting changes in its live stock tariffs for New York State points.

First, they have simplified their tariffs by putting all classes of live stock under one classification instead of having different minima and rates for each different class of live stock.

Second, they are now offering graduated minimum weights so that a shipper does not have to assemble much more than a large truck load and still be able to ship by rail. Whereas, formerly he had to load 22,000 pounds of

cattle in a car or pay freight on weight which he did not ship, now he can load as low as 10,000 pounds.

The rates, also, are adjusted so that shipment by rail is far more economical than by any other means. For instance, the distance from Watertown to Boston by rail is 386 miles and the rate on a maximum carload is only 38c per cwt. In other words, it costs less than 1c to have a thousand pound steer carried one mile and only \$3.80 to have it transported all the way from Watertown, N. Y., to Boston, Mass.

The processors of meat hope that these new rates will result in more movement by rail. They have found that stock brought in by trucks over long distances are more likely to be bruised, thus causing hidden losses. Those interested in the humane treatment of animals are likewise interested in the success of these adjustments in rail tariffs.

National Cherry Week

New York State cherry growers and consumers are making plans for National Cherry Week, to be observed throughout the United States February 15 to 22. Cale C. Scutt of Newark, N. Y., is chairman of a committee that sponsors local and state cherry pie-baking contests. The winner will compete in Chicago on February 22 in the national contest with winners from all principal cherry growing states. Other members of the New York State committee include: Wilson Rood, Westfield; Irving Beal, Sodus; Milton Hallauer, Webster; Fred Miller, Holley; Earl Howell, Newfane, and H. H. Barnard, Geneva.

Mark E. Luckman of Sodus, N. Y., chairman of the National Committee, points out that cherry dishes have long been popular during February because of the association with George Washington's birthday.

CESCO

electric fence controllers

pay back faster

Great engineering in attractive CESCO controllers, high line or battery, provides many amazing improvements that offer you every opportunity to profit most from electric fencing. For example, CESCO battery units eliminate all rotors, pendulums, and other current draining mechanical timing devices ordinarily used. CESCO timing is by electrical action—conserving battery power. CESCO high line units are simplified—provide important refinements never offered before.

Get More for Your Money

All CESCO units are proven safe, are built to deliver many years of satisfactory, trouble-free service by an organization with 25 years of experience in manufacturing scientific electrical instruments. Dependable, economical operation is what you want in an electric fence—particularly when it is combined with a low original cost.

Write today for illustrated, colorful catalog that will prove to you that CESCO controllers pay back faster—operate at the lowest cost of all.

More Shock no more current

In all CESCO units, a positive proof of more effective, more efficient shock. Oscillograph photos show CESCO shock is three to five times longer than others—with no more current used.

Approved for Safety by Wisconsin Industrial Commission

HOLSTEIN

BULL CALF

We are offering for sale our first bull calf from Cornell Pride No. 10, an outstanding son of Cornell Pride and Cornet Olie Lady, which produced 21,240 lbs. of milk and 889 lbs. of butterfat last year. The dam of this calf produced 16,880 lbs. of milk and 631 lbs. of butterfat last year in our own herd on twice a day milking. A bull with such an unusual inheritance for fat test along with milk production can do much to improve most New York Holstein herds.

MARSHALL BROS., Meeklenburg Rd., ITHACA, NEW YORK.

BULL CALVES ON FREE LEASE FOR 3 1/2 YEARS to 5 1/2 yrs. from Proven Holstein Sire, King Bessie Ormsby Boast, No. 593551. Registered calves offered to D.H.I.A. members, unregistered calves to non-members out of record cows. Full information on request.

Maynard L. Smith, R. 1, Elmira, N. Y.

COWS FOR SALE

Leased Over Thirty Bulls

One of our livestock advertisers wrote us that he had leased over thirty bulls through American Agriculturist advertisements.

We are constantly getting reports of good results from livestock advertisers. The Northeast Markets for Northeast Producers pages have sold thousands and thousands of dollars worth of livestock throughout the Northeast. This has been accomplished at farmers' advertising rates.

You too can reach and sell this responsive farm audience of more than 190,000 readers at the rate of \$12.00 for six issues for a one-half inch space.

If you have livestock to sell and want to use this page, why not write your name and address below, attach your advertising copy and mail to American Agriculturist Livestock Department, Ithaca, New York?

Sales Service

Livestock breeders who are subscribers of A.A. have a special and distinctive sales service at their command, **NORTHEAST MARKETS FOR NORTHEAST PRODUCERS**. It is made available to readers of A.A. in an effort to open markets for surplus that otherwise may have to be sacrificed. For details and rates, write the Advertising Dept. of American Agriculturist, Savings Bank Bldg., Ithaca, N. Y.

By J. F. (DOC.) ROBERTS

"EAT MORE PORK" is the slogan every retailer, distributor, processor, and farmer will be broadcasting for the next thirty days, or such a matter. It is justifiable from every angle, although I still cannot understand the situation. With all the talk of subsidies to protect our farmers against the world price, we have hogs selling in Canada at 9c a pound, and in this country at 6c. What has happened to our export trade, and why?

Wool continues in a very strong position, but already I am beginning to hear reports of bids of 30c, 32c, etc., for farm wools. This is one year that I do hope the wool producer will keep himself well posted and not break his own market, in spite of all sorts of pressures which are going to be brought to bear on him. We do not produce nearly as much wool as we consume in this country; therefore, we are in the position of a deficiency country on wool, which is just the reverse of our hog situation. With world conditions and world demand for wool, we cannot anticipate heavy imports and there is no justification at all for any lower wool prices. If anything, wool will be even higher than it is now, and

inasmuch as it is not a perishable commodity, unless you are bid between 40c and 45c for your wool, which is its present value on the farm, simply do not sell it. There is no danger of it piling up as a surplus.

Horses are again beginning to move, but as yet there has been no real upturn in their value. \$150 to \$200 will buy a really good young horse; and good, usable horses are selling between \$100 and \$125. Horses should increase in value from about three years of age, until they are eight. Mares can many times replace themselves. The horse gets its power from crude, unprepared sources, and he repairs his own mechanism. He is also adjustable to small or large loads, and he supplies manure in a form unequalled as a soil builder. It is estimated that at least 45 million acres of crop land that previously fed horses is now turned to growing crops for other purposes, or pasture land for other classes of livestock. Wonder how many of us have thought of this when talking of "farm crop surpluses and prices"?

A really good money-making farmer friend of mine set me to thinking, and I hope what he said will have the same effect on you. This is what he said: "There is no permanent remedy for 3c hogs like 3c hogs."

Have you tried your electric fence mechanism as a rat control around your corn crib, grain bins, etc.?

Northeastern Breeders Favor Calfhood Vaccination

BROADER PLANS for a Bang's control program in the North Atlantic States were advocated at a recent meeting at Springfield, Mass. Session was under auspices of the Animal Health Committee of the American Society of Animal Production, of which C. L. Clevenger, Mount Hope Farm, Williamstown, Mass., is chairman.

The conference unanimously adopted the following resolutions:

"1. That whereas this group believes in the continuation of the present test and slaughter program for those who elect to follow it, we also recognize that due to various reasons, including its high cost to breeders and to the government, we appreciate its limitations, and advocate that careful consideration be given to putting into effect a supplementary control plan.

"2. That inasmuch as calfhood vaccination is proving a satisfactory and convenient means of Bang's control under practical herd conditions, providing protection against infection at the lowest cost to both the government and the breeder, we advocate that it be given official recognition by the Department of Agriculture of each of the North Atlantic states.

"3. (a) That a plan be established in each state for certifying or accrediting herds in which Bang's disease is under control, and in which calfhood vaccination is being systematically practiced under state supervision.

"(b) That it is recommended that all calves be vaccinated between the ages of 5 and 8 months.

"(c) That each animal as vaccinated shall be properly identified and reported to the state official in charge of this work.

"(d) That consideration be given to exempting from the official report of the blood test those vaccinated animals that are under 20 months of age.

"(e) That no vaccine shall be used or offered for sale unless approved by the proper state or federal official; all

vaccine shall be applied by an approved veterinarian, who shall have a state permit to do this work.

"(f) That certificates of accreditation shall carry a statement that calfhood vaccination has been practiced in the herd, giving the date it was started.

"(g) That each state proceed to take steps to permit the entry of cattle from herds in other states that are so certified.

"(h) That uniform requirements for certifying herds containing vaccinated animals be adopted by all states.

"4. That nothing herein suggested shall be construed as being in any way opposed to any state-federal control program."

Considerable discussion concerning the present lack of uniformity in shipping regulations followed, with the result that the body asked the chairman to appoint a committee consisting of a member from each state for the purpose of conferring with state officials concerning the establishment of more uniform interstate shipping regulations.

Chairman Clevenger appointed the following group, each of which was requested to select a committee in his own state, consisting of representatives of each breed:

MAINE: W. Harold Shaw, Sanford; NEW HAMPSHIRE: W. A. Baker, Exeter; VERMONT: A. P. Bigelow, Middlesex; MASSACHUSETTS: James DeNormandie, Lincoln, and John G. Ellis, Lee; CONNECTICUT: Ernest F. Doane, Litchfield; RHODE ISLAND: Walter A. Cook, East Greenwich; NEW YORK: W. Dorr McLaury, Portlandville; PENNSYLVANIA: G. A. Burdick, Wrightsville; NEW JERSEY: Arthur Danks, Allamuchy; MARYLAND: Paul B. Misner, Catonsville.

Following the introduction of the subject of the need for uniform antigen, Doctor E. A. Crossman reported that the Bureau of Animal Industry is now producing a standard antigen which is in use in all states.

Put Your Baby Chicks on this NEW-TYPE Litter!

**It's Light in Color
—Highly Absorbent
—Economical**

STAZDRY is fast becoming a favorite litter for baby chicks, not only because it absorbs moisture readily, but also because it never cakes down hard. Air circulates through it and, as a result, it stays drier over longer periods. It is light in color and comparatively dustless.

STAZDRY comes in compact, easy-to-handle 100 lb. bales, yet it covers a surprisingly large area of floor space, and is very economical to use. Manured Stazdry makes an exceptionally good fertilizer. Get Stazdry from your local feed dealer.

NEARBY MARKETS for NEARBY POULTRYMEN

Let's Take Stock By J. C. HUTTAR

I'VE GOT a lot of things on my mind regarding this poultry situation and I'm just a little troubled about picking out only the most important things. I guess the way to start is to state the situation itself. While I shall try to stick entirely to known facts, I know myself well enough to realize that I'll

J. C. Huttar

probably be sneaking in an opinion here and there. The facts I'm not afraid of, as I believe we'll check on them; but you had better watch me on the opinions and check them more carefully with what you know.

Here goes! Since about the first week in December when egg prices dropped so low and feed prices were comparatively high, the business of producing eggs for market has been a losing one. I'm writing this on January 22, 1940. Egg prices have advanced 2½c a dozen on the large size and 5¼c a dozen on the mediums from the lows which they hit sometime in the last six weeks. Feed prices in the meantime have not advanced any higher than they were early in December.

It is MY OPINION that flocks which are laying over 50% and a good share of the large size are about breaking even at this writing. It is further MY OPINION that present prices on eggs will hold or advance for a while as long as cold weather continues, but when it gets milder we still have so many hens in the country that too many eggs will pour into the market and prices will again slide.

Hens and Hatching

The government reports for the last three months of 1939 showed much heavier selling off of fowls (layers) than in the same time in 1938. But this selling was slowed up at the end of the year by the low price of poultry. Therefore, we still have more hens than we had a year ago but the increase is not as great as it was three months ago. It is MY OPINION that some more have to go to market to cut the egg supply down to present day demand.

Last Monday and Tuesday I was in Chicago as a member of the National Poultry Planning Committee. For three months this committee has been working on a plan to develop a consumer education campaign to increase the demand for eggs. It is ready to be worked out now and I'll tell you more about it in another article.

On this committee is Reese V. Hicks, executive secretary of the International Baby Chick Association. A large proportion of the hatcheries and breeders of this country belong to that association and send him reports on their orders for baby chicks, hatchings, etc.

I asked Reese what he knew about the 1940 hatch. He said that early orders according to his reports are running 30% to 80% below last year, the heaviest cut being on the Pacific Coast.

That looks more favorable for egg prices later in the year but it is still too early to give this as a fact. We'll watch later reports.

So what?

Well, at this point I can't resist giv-

ing MY OPINION of what this all means to me. You draw your own conclusions.

I still stick to the story I told in this column in the Fall.

Flocks must be of good breeding and must be kept culled down closely to be profitable in 1940.

Further, however, the situation is going to continue to change in the next four months. I don't know which way. So watch it closely.

New York Egg Quotations

For about six months a joint committee of the Northeastern Poultry Producers Council and the Northeastern Federation of Eggs and Poultry Cooperatives have worked on specifications of a grade that could be used in trading on the N. Y. Mercantile Exchange and which would represent the better packs of Nearby large eggs.

They submitted these specifications to the Exchange in November and last week it was adopted with a few changes. The changes were not too important from a quality, color or cleanliness point of view.

Now get this. So far only one lot of eggs out of all that were offered for Exchange inspection and sale has passed inspection and made the grade. The one lot that passed had to be candled and most of the blood spots and cracks removed, otherwise it would have been rejected too.

I talked to the Exchange inspectors this morning and asked them why all the lots were turned down. The answer was that there were four common reasons:

1. Too many blood spots (not candled).
2. Too many cracks (poor packing).
3. Too many tints (breeding and producer grading).
4. Too many dirties (poor producer marketing).

I give you this information for two reasons. First, I think the Northeastern committee did a good job and are on the right track. I don't believe the premium system under which most Nearbys are now sold gets producers the best returns. In this system the price of fine eggs is based on the demand and supply of a lower grade and the two don't often go together. Secondly, it brings out the weakness in the marketing of Nearby eggs. You might say "Our eggs are all right, the Exchange is wrong in their grade requirements". But I tell you, that while the present requirements may need some small changes, they are very nearly in line with what the buyers of the best eggs are asking and paying for.

So, you ask, "What's the answer?"

Look up at the four reasons why Nearby eggs failed to make the grade. The blood spot angle may need some adjusting, but the other three things are your baby and mine. Let's do something about it.

"How do you like my engagement ring, dearie?"

NEARBY MARKETS for NEARBY POULTRYMEN

Your Questions Answered

Winter Culling

Is it advisable to sell hens that stop laying during winter, or should they be kept on the supposition that they will start up soon?

This is always a difficult question to answer. Apparently the best poultrymen have come to look upon culling as a continuous operation rather than something to be done once a year. If a poultryman knew *why* a particular hen stopped laying, he would know better what to do with her. If it is a slump due to drop in weight, the bird may be brought back into production in a relatively short time; while if the slump is due to poor health or the fact that the bird is just naturally a poor producer, the best thing to do is to dispose of her.

Egg Quality

Does green feed produce eggs with lower interior quality?

No. Tests have shown that the height of the albumen, the percentage of firm white, and the yolk index (three ways of measuring interior quality) were the same whether green feed was fed or not fed. Of course, *color of yolk* is affected to the disadvantage of those who send eggs to the New York market.

I have been told that chicks should be purchased early, but I do not have a particularly warm place to keep them and am uncertain as to what time I should buy them.

There is no question but that egg prices in the different seasons of the year have changed from what they were ten or fifteen years ago. The peak of prices comes in the fall rather than in the winter, and there is less difference between summer and winter prices than there once was. The result is that early-hatched chicks become producers early enough so that their eggs will get the high prices.

If you are going to continue in the poultry business, it seems to me that you should improve your chick brooding facilities so that you can begin buying or hatching early in the season. Some poultrymen now hatch chicks for the producing flock the year around so

that they have pullets beginning to lay in practically every month of the year.

What is the meaning of the term "pedigree hatching"?

This means that the ancestors, both male and female, of a particular bird are known for several generations. It is a rather complicated process and consists of leg banding breeders, keeping a record of matings, labeling eggs, and, as hatching time approaches, putting the eggs in wire boxes or cloth bags until the chicks can be leg banded. It has been shown that pedigree breeding is one of the best methods of "breeding up" a flock for higher production.

Hatchability

How long can I keep eggs for hatching and still get good hatchability?

Always put eggs in the incubator as soon after they are laid as possible. The general rule is that they should not be over two weeks old. Some poultrymen put the limit at ten days. Factors other than length of keeping affect hatchability. Early in the season great care should be taken to see that the eggs do not get chilled, and of course the feeding of the breeding stock is very important.

I try to feed my hens a little grain frequently during the day in order to encourage them to exercise, but almost always as I go in the house I find quite a number of hens on the roost with their heads drawn down between their shoulders. What can I do to get them to exercise?

Obviously these hens are not in the best of health. You didn't mention it, but I suspect that your house is damp, and some of the hens may be in the first stages of a cold. If my surmise is correct, the most important thing to do is to check over your ventilation system. If your litter is damp, you are getting too little change of air. A good way to get the information you need on ventilation is to drop a post card to the Mailing Room, College of Agriculture.

(Continued on Page 24)

Cornell Wins Poultry Honors

Cornell University won second place team honors, as well as high individual awards, in the 22nd annual Eastern Intercollegiate Poultry Judging Contest, held at Rutgers University, Jan. 12. Standing (left to right) are Robert Pinco, who was second high man in the individual scoring contest; Dr. G. O. Hall, coach, and Robert Guzewich, alternate. Kneeling are Clement Haimowitz, J. C. Scholes, assistant coach, and Marlin S. Prentice. Awards were made by Howard C. Pierce, national poultry buyer for the Great Atlantic & Pacific Tea Company, at a dinner given contestants by the A & P. Announcement of the appointment of Dr. Hall as general chairman for next year's contest was also made at the dinner. The Ithaca team was nosed out of first place by Pennsylvania State College, which won the Grand Championship Cup for the second consecutive year. West Virginia placed third.

(Continued from Page 23)
culture, Ithaca, New York, for their bulletin No. 315. It may be, too, that you have some pullets of low vitality that will never be profitable, in which case the best thing to do is to dispose of them now.

Capons

A subscriber wants information about caponizing and capons. A good source of information is Farmer's Bulletin No. 849. Readers can get this by sending 5c in coin to the Superintendent of Documents, Government Printing Office, Washington, D. C.

With some study and practice, any poultryman can learn to do a good job of caponizing, although if there is someone in the neighborhood who has had some experience, it would be advisable to hire the work done.

There is a demand for capons, particularly for Thanksgiving and Christmas. The operation should be performed from eight to nine months before marketing, and is usually done when the birds are eight to ten weeks old.

Chilling Hurts Eggs

All during the summer months we talk about protecting eggs from heat. In the winter we talk about protecting them from cold. When eggs are chilled, it causes a serious drop in their market quality. Therefore, it is important to gather them frequently, to store them in a cool (but not a cold) place, and to protect them while they are being sent to market. Chilling thins out the whites, which affects their candling quality and practically insures that they cannot top the market.

The Inside of a Hen

Every poultryman should be able to "post-mortem" a hen. To do this, the first essential is to know the normal appearance of the internal organs of a hen. With this information, it is comparatively easy to recognize abnormal conditions.

Most state veterinary colleges have a man skilled in poultry diseases to whom sick birds can be sent for a post-mortem and diagnosis. This, of course, is the accurate way to determine what is wrong and to get recommendations as to what to do to prevent further losses.

Trends in Poultry Keeping

Over a period of years several poultry trends are of interest to northeastern egg producers.

Numbers.—Over a period of years there has been a decrease in the number of hens on U. S. farms. On January 1, 1938, the number was 475,000,000; in 1933 it was 444,000,000; and in 1939 it was 431,000,000. It is expected that the January 1, 1940, census will show some increase over last year's figures.

More Poultry in Northeast.—While total hen population is trending downward, northeastern hen numbers have increased. In 1930 Northeastern and Middle Atlantic States had about 10 per cent of all hens in the country. On January 1 a year ago the North Atlantic States had 5 per cent more hens than the average for 1928-37, while the entire United States hen population was 5 per cent less than the five-year average.

Egg Production.—Hens are laying more eggs. From 1927 to 1936 average production per hen was 92 eggs. In 1937 it had jumped to 100 eggs, and

New Matings for 1940

For 1940 we are announcing two new matings which round out our offering of chicks so that we have a chick for every need.

Send for our new free catalog which describes our Breeding Control mating of "SUPER" chicks, our old reliable SUSQUEHANNA STRAIN mating, on which we have built our reputation, and our lower priced economy STERLING QUALITY mating. Prices start at \$8.95 for incubator run chicks, \$2.95 for sexed males, \$13.95 for pullets. Sexed pullets and cockerels are offered in all three matings. Our sexed chicks are guaranteed 95% accurate and are sexed by a world famous sexer.

All chicks blood tested by the long tube agglutination test in State laboratory your guarantee against disease.

TIME PAYMENTS IF DESIRED

Ask about our POULTRYMEN'S BUDGET PLAN for purchase of chicks on time payments. This plan will help you finance your chicks, equipment and feed.

Prompt inquiries will receive in addition to our free catalog a FREE Profit Sharing Certificate entitling the holder to a \$2.00 per 100 discount from our regular prices for prompt orders.

WILLIAM S. MAPES, Box A, MIDDLETOWN, N. Y.

Say you saw it in AMERICAN AGRICULTURIST.

in 1938, 106 eggs were laid per bird. Also hens are laying more eggs in the fall and slightly fewer in the spring—a tendency which is quite marked in the Northeast.

Bigger Flocks.—In 1930 New England States had 591 flocks of over 1,000 hens. In 1935 there were 1,053 flocks over 1,000 birds, and the tendency to larger flocks seems to be continuing.

Breeds.—Figures show some tendency to shift to heavier breeds. This has increased the supply of brown eggs, particularly in New England, and has also increased poultry and meat supplies.

Other trends that are worth watching include increase in sexing of baby chicks, increase in number of baby chick hatcheries in the Northeast, the probability of a new live poultry terminal in New York City, and a continued increase in numbers of turkeys.

A Brief New England Journey

(Continued from Page 8)

Under a tree in front of his house he lay in his open coffin. He wore his blue coat with brass buttons and one arm was lying across his breast. The day was mild and hazy and the autumn sunshine lay full and warm on his face. And in that lonely place and in a time when means of transportation were slow and difficult, there was gathered a company that filled the farmhouse yard and flowed far into the surrounding fields. In all its history New England had never known at a funeral such an immeasurable company.

It has been the misfortune of some once famous men to outlive their fame and to go out of the world comparatively unnoticed. It was Webster's happy fortune to pass at the very zenith of his reputation. When he died, in the City of Boston and in remote Massachusetts hamlets and on windswept hilltop farms men said to one another that the lamp of New England had gone out. John Fiske, destined to be the historian of those times, was a boy of ten years when Webster died and he writes that he, boylike, wondered if the sun would rise next morning now that the greatest of men had passed from earth.

He died as he had lived, unafraid and unashamed. When he felt that the end was near, he summoned his faithful black body-servant, William, and bade him go down to the cove where his shallop lay and light the ship's lantern and hang it at the mast head and run up the flag saying, "I want to keep my light burning and my flag flying until I die." In his final hours he fought his great battles over again and babbled of many things and his last words were "I still live." So passed the statesman and orator who, as no other man of our history, had the power by the beauty of his phraseology and the magic of his voice to charm and persuade and enthuse men. Like almost all really great national leaders he dreamed of the Presidency of the United States. Once it seemed almost within his grasp and then illogically it passed him by. To a degree which few men have ever attained, he passionately loved and believed in our Republic. He was perhaps the last of that illustrious line of public men whose genius lent such luster to the early years of our country, and when he died he left no successor.

Hall's Chicks

Leghorns - Reds - Rocks - Wyandottes
New Hampshires - Hallcross (Crossbred) Chicks

All chicks produced from flocks tested for Pullorum Disease (B.W.D.) by the Official State Testing Agency of one of the six New England States, with NO REACTORS FOUND
Tube Agglutination tested, within the preceding calendar year

"WELL BRED FROM WELL BREEDERS"

A Helping Hand

We have 5 Service Leaflets which have saved many dollars for many poultrymen. We will send any of these without charge or obligation to anyone (whether or not they have ever bought Hall's Chicks) who asks for them.

"In publishing these leaflets and making them available to poultrymen, you are performing

A Real Service to the Poultry Industry"

says W. F. Sullivan of the New England Homestead.

These leaflets contain a wealth of the latest information to help poultrymen avoid or minimize losses from the more common causes. They are not written by scientists; they are written by real poultrymen who have a scientific background and training, but who can put down in everyday language the best and latest information, in easily understandable form. These men are working all the time with eggs, chicks, breeders. They are practical men who know their stuff. These 5 Leaflets are:

- No. 1. Helpful Hints on the Starting and Care of Chicks.
- No. 2. Coccidiosis and Enteritis.
- No. 3. Prolapse and Cannibalism.
- No. 4. Laryngotracheitis; Bronchitis; Coryza, Pox.
- No. 7. Successful Battery Brooding.

Please request these, or any of them, by number as listed; remember, they are

FREE ON REQUEST

regardless of whether you have ever bought Hall's Chicks, or whether you ever will buy Hall's Chicks.

American Poultry Journal says

"A set of 'Service Leaflets' published by you just came to my desk and I'm impressed by the wealth of information they contain."

Poultry Tribune says

"It is our opinion that these represent a great constructive service and reflect the vision of your outstanding institution."

Poultry Item says

"I want to say a word about your Service Leaflets. The subjects are not only carefully chosen, but the treatment is so sound and without bias that I feel you deserve a great deal of credit for supplying your customers and friends with a service of this kind."

Quality chicks since 1911. "Never a week without a hatch" since 1927. Pullorum free by State test since 1927. Over 51 million chicks sold in 10 years. We ship prepaid and guarantee 100% live delivery. Catalog and Price List free. Tel. Wallingford 645-5.

"Making Over"

by
MRS. GRACE WATKINS HUCKETT

3121
HAT & BAG
3144

2060

3133

3137

3124
HAT - 2812

2935

MAKING OVER has a thrill all its own; a well done job is its own reward. Before actually starting to make over a garment it should be examined to see if it is strong enough or can be made attractive enough to warrant the trouble and time it will take. Furthermore, the final garment should be becoming and should fit in with the rest of the wardrobe.

As a rule, adults' clothing cuts to advantage for younger members of the family. Yet one's own clothes may be altered and brought up to date by such simple treatment as fitting in at the waist, good pressing and adding a new neck or sleeve finish.

A friend had a two-year old dress made over. The skirt was shortened and fitted more closely around the hips, while the waist was fitted around the armholes to bring the sleeves well up on the shoulders; darts were put at the waistline to distribute fullness in the new manner. A new neck finish completed the alterations which converted an obviously outmoded dress into one which can go anywhere.

A one-piece dress may have darts at each side of back or front; also it may have the side seams ripped open and refitted to curve in more at the waistline, in order to give it a new look. In doing this however, baste and try on before stitching, for it may roll up at the waistline if pulled in too much at the sides.

Fortunately, present styles use combinations of fabric to a great extent, either in self or contrasting color combinations in plain, figured, striped or plaid materials. This is particularly fortunate because of difficulty in matching a plain color. Before starting to make over a garment, first examine every part of it. Hold it up to the light to see better the worn places, and pull the material between the hands to see if it is still strong enough to be useful.

If it meets these tests then rip or cut apart at the seam lines. Cutting is quicker and is possible if a child's garment is being made from that of an adult. Especially in ripping silks, pull the threads first on one side then on the other to avoid tearing. A razor blade handled cautiously to avoid weakening seams, can be used to rip woolen materials.

If the material was not put away clean, it should be washed or dry cleaned thoroughly but carefully to prevent shrinking or running of colors. It is wise to test a sample first if the material is to be washed. If the materials are faded, redyeing may do wonders to freshen them. However, the right dye for wool or for cotton should be used and directions followed absolutely. Press on the wrong side, using a thick pressing cloth for woolens, a thinner one for silks.

If a coat is being relined, the old lining makes the best pattern. In the case of other make-overs, a reliable pattern is the best guide even though it may have to be adapted a bit to the materials. In selecting the patterns, the size and shape of pieces in the old garment should be considered. If piecing has to be done, the joining should make a decorative seam if possible. As with any dressmaking job, plenty of pressing makes all the difference in the

appearance of the finished product. The pattern numbers shown here have been selected because they are so easily adapted to making over.

Take jackets, for instance those shown as pattern collection No. 3137. In your collection of old clothes there may be dresses with good skirts, but absolutely hopeless bodices. There may be others which may be converted into new skirts and by adding new material for a jacket, a new outfit is evolved. Or there may be gay silks, velvets, corduroys, flannels, piques or figured cottons—one of these

Winter Garden

By Julia Lounsbery Wallace.

Like gaunt, uneasy souls the bare trees sway,
Moaning their sorrows by the garden wall,
Guarding the graveyard of the summer flowers
Now folded deep in winter's gloomy pall.

Under these lead gray skies we would despair,
Finding no words for grief with tongue or pen,
Did we not know that sun and wind and shower
Will come with Spring and make them rise again.

would jazz up an old or new frock, besides adding just the right weight oftentimes for changeable weather. Silk or satin jackets in the dusty pastel colors are lovely with black dinner or evening dresses.

That old college blazer in gay stripes would feel very much at home as a spring or summer jacket if recut by a new pattern. Fire-engine red and dusty gray are popular color combinations; red, white and blue, also popular, would satisfy the most patriotic.

Even for the smaller folks, sizes 6 to 14, jackets are the rage today. Here again there is a wide range of choice, combining different plain colors, or plain with plaids or figures, woolens with silks or cottons. Pattern No. 3124 was chosen for these reasons. Perk up this outfit with a cute hat, like No. 2812, made to match either jacket or skirt or perhaps cut down from your own old felt or velvet.

Jumper dress No. 3121 makes attractive use of the good parts of silk or wool dresses, while the guimpe can utilize remnants or good parts from old figured dresses. In the smaller sizes even the good parts of old blouses could be used.

Every woman knows that accessories are almost as important as the main part of the costume. A saucy hat and bag to match will bring any makeover out of the doldrums. Just note the effect of hat and bag No. 3144.

The present vogue for ruffles may apply just as well to that slip made from last year's dress which was showing wear under the arms and looked faded across the shoulders. The ruffles may match or be in striking contrast. A light slip may be made from a large nightie no longer used. Anyway, the pattern is No. 3133.

Occasionally a dress shrinks or the

individual adds weight. Furthermore, every spring redingotes in one form or other catch public fancy. No. 2060 is ideal for meeting just such a situation. It lives up to all the requirements of style and yet opens up many possibilities for combining different fabrics, both old and new, in a highly becoming manner.

In any lot of old clothes there must be some of Dad's suits worn at the elbows or other places. Or from mother's wardrobe there may be wool jersey, flannel, small patterned tweed, velveteen or heavier cottons. Suit pattern No. 2935 may be made with jacket and pants to match, or with matching blouse and pants and harmonizing or contrasting jacket.

PATTERNS

JUMPER DRESS, No. 3121, blouse included, sizes 12 to 20. Size 16 requires 2½ yards of 39-inch material for the jumper; 1½ yards for the blouse.

HAT AND BAG SET No. 3144, matching Scotch hat and bag to accent a coat and dress. One size, adaptable to any headsize.

SIMULATED REDINGOTE FROCK No. 2060.—For dress grown too tight, simply slash up the front and add a strip of gay print. Sizes 36 to 50. Size 36 requires 1½ yards of 39-inch print fabric for panel; 3½ yards for dress.

SLIM WAISTED SLIP No. 3133 goes well under the small waisted frocks of this season. Sizes 14 to 44. Size 36 requires 2¼ yards of 39-inch material.

BOLEROS AND BLOUSES No. 3137 team with skirts or accent dresses in a practical, smart manner. Sizes 14 to 42. Size 36 requires 1¼ yards of 39-inch material for long sleeved jacket; 1½ yards for long sleeved bolero; 1½ yards for short sleeved bolero and sash.

JACKET SUIT No. 3124 appeals to the young fry as well as to the grownups. Match or mix fabrics and wear together or with other outfits. Sizes 6 to 14. Size 8 requires 1 yard of 39-inch material for jacket; 1½ yard for skirt; ½ yard of 35-inch for bodice top.

BRIMMED HAT No. 2812 can be made from leftover pieces. Patterns come in sizes 19, 20, 20½, 21 and 21¼ inch headsize.

LITTLE BOY'S SUIT No. 2935 is Eton style, collarless, easy to make, includes jacket, trousers and cap. Sizes 4 to 10. Size 8 requires 1½ yards of 54 inch material for all three pieces.

TO ORDER: Write name, address, and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new Fashion Catalog.

An Easy Valentine Decoration

Cut canned cranberry sauce in slices ¼ inch thick. With a sharp knife or cookie cutter, shape to resemble hearts. Use on top of open-faced cottage cheese sandwich or to add color to a salad such as cabbage and apple with sour cream dressing.

Another sandwich suggestion good for any time of the year is to combine 2 parts of cranberry sauce with 1 part peanut butter and blend well. This is a good filling for sandwiches or to spread on crackers for immediate use.

"He hates licorice, so give me a stick of it."

Today in Aunt Janet's Garden

Keeping Houseplants Happy

USUALLY houseplants manage to survive the first part of winter fairly well. It is the latter half that shows whether or not they are happy. But their needs are really fairly simple. First of all, they should have a sunny location; second, they should not be too warm. They should have enough water to keep from wilting; and finally they should have regular doses of plant food. Since most houses are too warm and dry, the best place for plants is the cool and sunny corner of the room. To correct the dryness, use a mat of moist material in a saucer under each flower pot. Sphagnum moss, especially manufactured plant mats, blotting paper, or old newspapers may be used for this purpose.

Most houseplant specialists recommend feeding the plants about twice a month. For this purpose use a "gardener's weak tea", made by dissolving well rotted barnyard manure in water or instead dissolve a teaspoonful of any kind of complete chemical fertilizer in a quart of water. If plant tablets are used, the manufacturer's recommenda-

tions should be followed exactly.

Since plants breathe through their leaves, it is important to keep them free from dust. As good a way as any is to put the plants in the sink or bathtub and spray them under pressure with warm water. If the plant is too large to do this, simply wipe off the leaves with a damp cloth. Rubbing oil on leaves seals the pores and therefore is very bad for the plant.

Washing the plants also removes many of the insects which trouble houseplants. For small plants this spray may be obtained by pressing a finger over the end of the faucet and holding the plant under the spray. Use your judgment as to how strong and how warm the spray should be.

However, the most dependable method of controlling the "bugs" is to spray or wash the plant with a mixture of 1/4th teaspoon nicotine sulphate in one quart of water to which a little soap has been added. A small spray gun like those used for mosquitoes, may be used, placing the plant in the sink or tub. For mealy bugs and scales, hand washing with a soft cloth or sponge is better than spraying. A little tobacco dust sprinkled on the surface of the soil helps to check plant lice. If there are only a few mealy bugs present, touching them lightly with a camel's hair brush, dipped in equal amounts of denatured alcohol and lukewarm water, will finish them.

Can You Write a Good One-Act Play?

—Photo by W. H. Stainton, Ithaca, N. Y.

THE PICTURE above shows a scene from "Nothing Doing", the one-act play by Grace Smith Beers of Lanesboro, Mass., which won first prize in the amateur play contest conducted last year by *American Agriculturist*. Cornell University Dramatic Club recently produced this play, along with the two plays which won second and third prizes in our contest.

This year, *American Agriculturist* is

AUNT JANET'S Favorite Recipe

WINTER time calls for special attention to salads. Being among the protective foods, salads are worth the extra effort to make them and you will be surprised to find out how good the following unusual salad is:

Winter Salad

Grate raw rutabaga and place in cheesecloth to squeeze out some of the juice before combining with an equal amount of chopped celery. Mix with French dressing or mayonnaise thinned with vinegar and serve on lettuce leaves or on a bed of shredded white cabbage.

Grated raw carrot is equally good instead of the rutabaga.

again offering cash prizes (1st, \$15.00; 2nd, \$10.00; 3rd, \$5.00) for the best amateur one-act plays submitted to us by June 1st. Aim of the contest is to stimulate interest in writing rural life plays, and everyone who has an interesting idea for a play of rural or local historical interest is urged to take part. Plays should consist of one act, requiring about 30 minutes to play; stage setting should be simple enough for an amateur group to set up. As to kind of play, it may be a tragedy or comedy, or a jolly or ridiculous farce, but it should have a rural background and may be historical or modern.

Plays should be submitted on plain paper, about 8 1/2 x 11 size; they may be either typewritten or handwritten, but must be legible. Mail flat, in large envelop, to Amateur Play Editor, *American Agriculturist*, Box 367, Ithaca, N. Y., not later than June 1, 1940. Judges will be same as in last year's contest, and they repeat their offer of assistance to any writer submitting a workable idea for a play. So if you think you have a good idea for a rural life play, let us hear from you.

Incidentally, Cornell University Theatre now has a collection of good one-act, rural life plays, including winners in our last year's contest, which it will furnish royalty free to community groups. Anyone interested should write to Robert Gard, care of Cornell University Theatre, Ithaca, N. Y.

"1800 and FROZE TO DEATH"

"WHAT SHALL we have for Thanksgiving dinner?" was a question which distressed more than one household that year. Indeed, it was often a question what to have for dinner, supper or breakfast on any day. For that was the strangely unpropitious, unproductive season of 1816, quaintly known in local annals as "1800 and Froze to Death."

Nothing grew, nothing ripened properly. Winter lingered even in the lap of May. As late as the middle of June there was a heavy snowstorm in New England. Frosts occurred every fortnight of the season. The seed potatoes, corn and beans, when planted, either rotted in the ground or came up to be killed by the frosts. The cold continued through July and August. A little barley, still less wheat and rye, a few oats, in favorable situations, were the only cereals harvested, and these were much pinched in the kernel.

Actual starvation threatened hundreds of farmers' families as this singular summer and autumn advanced. The corn crop, then the main staple of the East, was wholly cut off. Two and three dollars a bushel—equal to ten dollars today—were paid for corn that year—by those who had the money to purchase it.

Moreover, there appeared to be little or no game in the forest; many roving bears were seen, and wolves were bold. All wild animals, indeed, behaved abnormally, as if they, too, felt that nature was out of joint.

The dreary, fruitless autumn drew on; and Thanksgiving day bade fair to be such a hollow mockery that in several states the governors did not issue proclamations.

In the neighborhood where my grandparents lived, at a schoolhouse meeting on November 21st our nearest neighbor, Jonas Edwards, made a motion "that the people of the place keep the 28th of the month as Thanksgiving day—the best they could."

The motion prevailed; and then the poor housewives began to ask the question, "What shall we have for Thanksgiving dinner?" At our house it is still remembered that one of my young great-uncles cried in reply, "Oh, if we could only have a good big johnny-cake!"

And it was either that very night, or the night after that the exciting news came of the arrival of a ship-load of corn at Bath and Brunswick.

At Brunswick, and other towns near the coast of Maine, where the people were interested in maritime ventures, it had become known that a surplus of corn was raised in Cuba, and could be purchased at a fair price. An old schooner, commanded by one Capt. John Simmons, was fitted out to sail for a cargo of the precious cereal. For three months not a word was heard from schooner or skipper.

Captain Simmons had purchased corn, however, and loaded his crazy old craft full to the deck with it. Heavy weather and head winds held him back on his voyage home. But it got in at last, early in November, with three thousand bushels of this West Indian corn.

A great hunger for corn-cake swept through that part of the state; and in our own little neighborhood a searching canvass of the resources of the five log farmhouses followed. As a result of it, young Jonathan Edwards and my then equally youthful Great-Uncle Nathaniel set off the next day to drive

By C. A. STEPHENS

to Brunswick with a span of old white horses, hitched in a farm wagon without springs, carrying four rather poor sheep, four bushels of barley, and fifteen pounds of wool, which they hoped to exchange for five bushels of that precious corn. On top of it all there were three large bagfuls of hay for the horses. The boys also took an ax and an old flint-lock; for much of the way was then through forest.

It was a long day's drive for horses in poor condition, but they reached Brunswick that night. There, however, they found the cargo of corn so nearly sold out, or bartered away, that they were able to get but three bushels to bring home.

The next morning they started for home, lightly loaded with their dearly bought corn. Their route lay along the Androscoggin River, and they had got as far on their way as the present factory town of Auburn, when they had an adventure which resulted in very materially increasing the weight of their load.

It was a raw, cloudy day, and had begun "to spit snow"; and as it drew toward noon, they stopped beside the road at a place where a large pine and several birches leaned out from the brink of a deep gorge. Here they fed their horses on the last of the three bagfuls of hay, but had nothing to cook or eat in the way of food themselves. The weather was chilly, and my young Great-Uncle Nathaniel said to Jonathan:

"If you will get some dry birch bark, I will flash the pan. We will kindle a fire and warm up."

Jonathan brought the bark, and meanwhile Nathaniel drew the charge from the old "Queen's arm," then ignited some powder in the pan with the flintlock, and started a blaze going.

Jonathan had gathered up a large armful of dry branches, and turned to the fire, when they both heard a strange sound, like a deep grunt, not far away, followed by sharp crashes of the brush down in the basin.

"What's that?" Nathaniel exclaimed. "It's a bear, I guess," and he snatched up the empty gun to reload it. Jonathan, too, threw down his armful of boughs and turned to get the ax.

Before they could do either, the strange grunts and crashes came nearer, and a moment later a pair of broad antlers and huge black head appeared, coming up from the gorge.

At sight of the snorting beast, Jonathan turned suddenly. "It's a moose, Nat!" he cried. "A big bull moose! Shoot him! Shoot him!"

Nat was making frantic efforts, but the gun was not reloaded. Recharging an old "Queen's arm" was a work of time.

Fortunately for the boys, the attention of the moose was fully fixed on the horses. With another furious snort, it gained the top of the bank and bounded toward where they stood hitched, chewing their hay.

The tired white horses looked up suddenly from their hay, and perceiving this black apparition of the forest, snorted and tugged at their halters.

With a frightful bellow, half-squeal, half roar, the moose rose twelve feet tall on his hind legs, and rushed at the one hitched nearest. The horse broke its halter, ran headlong against its mate, recoiled, bumped into a tree trunk, and then,—the trees standing thick in front of it—backed over the bank and went out of sight down the bluff, the moose bounding after it, still bellowing hoarsely.

The other horse had also broken its halter and ran off, while the two boys stood amazed and alarmed at this tremendous exhibition of animal ferocity.

"Nat! Nat! He will kill that horse!" Jonathan exclaimed, and they both ran

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

Sunny Day

Because the sun was kind today,
My work has gone so swift!
Little tasks it splashed with laughter,
And to the big ones gave a lift.

It sparkled in the dishes,
Made rainbows in the foam,
And poked in every corner
Of my placid little home.

I found a sunbeam in the upper hall
And chased it down the stair.
Later, in my sewing room,
I found it lingering there.

Happier much our journey
Down our household road
When sunshine lights the highway,
And laughter lifts the load.

—Anna M. Allen,
R. 1, Elmer, New Jersey.

to look over the bank. Horse and moose were now down near the water, where the river ran deep and swift under the steep bank, the horse trying vainly to escape through the tangled alder brush, the moose savagely pursuing.

The sight roused the boys to save their horse. Ax in hand, Jonathan ran and slid down the bluff side, catching hold of trees and bushes as he did so, to keep from going quite into the river. Nat followed him, with the gun which he had hastily primed. Both horse and moose were now thrashing amidst the alder clumps.

"Shoot him, shoot him!" Jonathan shouted. "Why don't you fire? Oh, let me have that gun!"

Both animals were now tearing along the brink of the deep stream, stumbling headlong one second, up the next, plunging on. As often as Nat tried to steady himself on the steep side of the bluff for a shot, either the horse was in the way or both animals were wholly concealed by the bushes. Nat could not shoot with certainty, and Jonathan grew wild over the delay.

"Shoot him yourself, then!" Nat retorted, panting.

Jonathan snatched the gun and dashed forward, Nat picking up the ax and following after. On they ran for several hundred yards, barely keeping pace with the animals. Jonathan experienced quite as much difficulty in getting a shot as Nat had done.

At last he aimed and snapped—and the gun did not go off.

Nat now dashed past Jonathan, and running on, attempted to head the horse off at a little gully down the bank, to which they had now come. It was a brushy place. He fell headlong into it himself, and rolled down, still grasping hard at the ax. He was close upon the horse now, within a few yards of the water, and looking up, he saw the moose's head among the alder brush. The creature appeared to be staring at him, and regaining his feet, much excited, Nat threw the ax with all his strength at the moose's head.

By chance, rather than skill, the poll of the ax struck the animal just above its eyes, at the root of its antlers. It staggered, holding its head to one side a moment, as if half-stunned or in pain. Then, recovering, it snorted, and with a bound through the

The Song of the Lazy Farmer

MY NEIGHBOR leads a hectic life, he's havin' trouble with his wife, he says that woman talks too much, and so he's got himself in Dutch by tellin' her right to her face that he'd like silence round that place. Of course, she had to tell him then just what she thinks of all us men, and just how fine this world would be if we could all be sent to sea. She had a lot of things to say, she told him that she wouldn't stay and clean up after him no more when he tracks up her kitchen floor with muddy boots, and blast his hide, why don't he take 'em off outside? She said there wasn't any use of havin' his tobacco juice all splattered round the big gob-boon, and if he didn't quit right soon and turn him over a new leaf, she'd show him who was boss-in-chief.

He didn't git no sympathy a-tellin' tales of woe to me, I've lived with my Mirandy Jane for many years, and I refrain from settlin' someone

else's fight, for I am busy day and night a-keepin' peace on my own place, so I won't git caught off'n base by buttin' in on neighbor's row, he'll have to settle it somehow. But I could tell him if I would, to keep his wife afeelin' good by tellin' her how nice she looks and how, from out a world of cooks there ain't another one whose pie just hits the spot and makes a guy feel thankful that thruout his life, his meals are cooked by such a wife. The way to settle fam'ly fights is not to stand up for your rights, but just to say to that there girl you married, that you love each curl, and just to prove it to her, that you'll pay to git her a new hat. There ain't no woman can resist a hat, it's better than a fist to bring back peace to any home, so if you don't believe this pome, just try it out and you will see, how quick it makes her smile, by gee.

Tasty Meat Dishes

EVERY COOK wants to know how to utilize inexpensive meats in tasty and appealing dishes; also, new ways of using left-overs. Our new Home Service Bulletin No. 7, entitled *Chopped Meat Recipes*, contains five pages of delicious, easy recipes. Some call for raw hamburger, and others for diced meat either raw or cooked, salt or fresh. Besides American meat dishes, there are several delectable ones from foreign lands. For a copy of this new bulletin, which has been prepared by Mrs. Hockett, write to *American Agriculturist*, Home Department, Box 367, Ithaca, N. Y. Be sure to enclose 3c to cover mimeographing and mailing costs.

brush, jumped into the stream, and either swam or waded across to the low, sandy bank on the other side. There it stood, still shaking its head.

Jonathan had caught up with Nat by this time, and they both stood watching the moose for some moments, hoping that the mad animal had now had enough of the fracas and would go his way. The horse was in the brush of the little gully, sticking fast there, or tired out by its exertions; and they now began considering how they could best extricate it and get it back up the bluff.

Just then, however, their other horse neighed long and shrill from the top of the bank, calling to its mate. The frightened horse beside them neighed back in reply.

These equine salutations produced an unexpected result. Another hoarse snort and a splash of the water was the response from across the stream.

"He's coming again!" exclaimed Jonathan.

"Have you got the powder-horn, Nat? Give it to me, quick, if you've got it!" Nathaniel had had the powder-horn up on the bank but had dropped it there, or lost it out of his pocket in his scramble down the bluff.

There was no time to search for it. The moose was plunging through the narrow stream, and a moment later sprang ashore and came bounding up the gully, toward the horse.

The boys shouted to frighten him off. The crazy creature appeared neither to hear nor heed. Jonathan hastily took refuge behind a rock; Nat jumped to cover of a tree trunk.

"Oh, if we could only find that powder-horn somewhere!" Jonathan exclaimed.

Again the place resounded to a frightful medley of squeals, bellowings

and crashes in the brush. This time Jonathan had caught up the ax, and approaching the furious melee of whirling hoofs and gnashing teeth from one side, attempted to get in a blow. In their wild movements the enraged animals nearly ran over him, but he struck and stumbled.

The blow missed the moose's head, but fell on the animal's fore leg, just below the knee, and broke the bone. The moose reared, and wheeling on its hind legs, plunged down the gully, falling partly into the river.

A dozen times it now struggled to get up, almost succeeding, but fell back each time. With the ardor of battle still glowing in him, Jonathan rushed forward with the ax, and finally managed to deal the moose a death-blow. With a knife they then bled it, and stood by, triumphant.

"We've muttoned him! We've muttoned him!" Nat shouted. "But I never had such a fight as that before!"

The horse, as it proved, was not seriously injured; but they were obliged to cut away the alder brush in the gully to get the animal back up the bluff, and were occupied for fully an hour doing so.

The body of the moose was a huge one; it must have weighed fully fourteen hundred pounds. The boys could no more have moved it than they could move a mountain. Moreover, it was now beginning to snow fine and fast.

Jonathan had a fairly good knife, however, and by using the ax, they succeeded in rudely butchering the carcass and dismembering it. Even then the quarters were so heavy that their full strength was required to drag them up the bluff and load them into the wagon. The head with the broad, branching antlers, was all they could lift to the top of their now bulky load.

The task had taken till past four o'clock of that stormy November afternoon. Twilight was upon them, the wintry twilight of a snow storm, before they made a start; and it was long past midnight when they finally plodded home.

There were corn-cake and moose venison for Thanksgiving dinner.

Equilibrium

By WILLA BAKER.

If I should have no sadness in my life,
I would forget the poetry that lies
In aged faces, crippled hands, and
nights

That speak of loneliness in starlit
skies.

But if I knew no happiness at all,
The beauty of the rising sun would be
But nothing in a life of endless time,
Where blackness left no room for
poetry.

Have we done a job?
Say listen!

MAYBE you remember, back last fall, when folks were asking if the railroads were in shape to handle an emergency increase in traffic.

Well, here's the answer.

Between August and October we had the biggest increase in traffic ever recorded in so short a stretch of time.

Did we handle it? Snappy's the word. That increase was handled without congestion, delay or a hitch of any kind.

The fact is — when the railroads loaded the peak movement of 861,000 cars in the week ending October 21, there was still a daily average of 64,299 surplus cars in good order and ready for duty.

And remember that the railroads that did this job have been through ten years of tough sledding.

All this shows that railroad men know

their business. It proves again that the railroads have the capacity and the ability to handle their job.

Above all, it spotlights the fact that the railroads deserve the square deal they ask for — a fair break in legislation and regulation — and the opportunity to earn a living.

This isn't the first peak load the railroads have been called on to handle. It won't be the last. They ought to have a fair chance to keep themselves ready for any emergency.

What's needed now is a national policy of equal treatment for all forms of transportation.

Ford Tractor Production Speeded

FORD TRACTOR PRODUCTION SPEEDED.—Famous "B" building at the Ford Motor Company Rouge plant in Dearborn, Mich., is humming with activity these days as production of the new Ford tractors and Ferguson wheel-less hydraulically controlled implements is speeded. Production is now running at the rate of 150 tractors a day. Photo shows a new tractor coming off the final assembly line. As soon as final inspection and adjustments can be made and an implement attached the tractor will be ready for shipment.

No farmer can have too much information about fertilizer. Recent years have seen important developments in new products and new methods of application. The Ammonia Department of E. I. DU PONT DE NEMOURS CO., Wilmington, Delaware, has recently published a booklet called "Good Fertilizers Are Resistant to Leaching." Also available at this time is another excellent leaflet called "Uramon for Fruit Trees" which the Du Pont Company offers free of charge to readers of *American Agriculturist*.

A post card addressed to the above company will bring you copies by return mail.

* * *

Seldom has a new venture aroused such universal interest as the quick freezing of fruits and vegetables. THE ESCO CABINET CO. of Westchester, Pa., will be glad to send you a four-page folder called "Fresh Meats, Fruits and Vegetables the Year Around" if you will drop them a post card.

* * *

Just off the press, the 1940 Harris Seed Catalog is the sixtieth issued by JOSEPH HARRIS CO., INC., Moreton Farm, Rochester, N. Y. The issuing of a mail order seed catalog every year for 60 years by a firm owned by the same family and operating the same seed farm is an unusual record and speaks well for the quality of their product. This year's catalog follows the same conservative lines as its predecessors, which have always been noted for completeness and accuracy of description and really worthwhile information. Anyone who grows vegetables or flowers should have a copy of this catalog for reference.

* * *

One of the necessary pieces of equipment on a farm is a good calendar with readable figures. HALL BROTHERS HATCHERY, Box 59, Wallingford, Connecticut, have such a calendar they would be glad to send you on request. It is not only a calendar, but has provision for a daily listing of receipts and expenses, plus some excellent boiled-down farm information which you will find helpful.

* * *

Advertisers in recent issues of *American Agriculturist* are offering booklets and catalogs that you will find interesting and helpful. For example, it is about time to begin gardening on paper. Lay

in a supply of postcards, look up the January 20 issue, and refer to the seed advertisements on Pages 8, 12 and 13.

Dairymen will be interested in the following booklets: "Proper Dairy Management", offered by the Beacon Milling Company, Cayuga, New York.

"Proved Plans that Build Barn Profits", Starline Inc., Dept. K, Albany, New York.

"Information About Mastitis", offered by Nears Food Company, Dept. 1039-F, Binghamton, New York.

A booklet on feeding dairy cows, offered by Tioga Mills, Dept. AA 140, Waverly, New York.

Article on Bovine Mastitis available without cost from Calco Chemical Division, American Cyanamid Company, Bound Brook, New Jersey.

"Things to Know About Certified Better Fence," Pittsburgh Steel Company, 1613 Grant Building, Pittsburgh, Pa., and catalogs and information offered by various silo manufacturers.

* * *

FOR HOMEMAKERS

Every housewife likes to try new recipes. Use the coupon on Page 27 of the January 20 issue and get a free package of Maca Yeast, and a recipe booklet from the Northwestern Yeast Company, 1750 North Ashland Avenue, Chicago, Ill.

"QUIZ" CONTEST FOR FARMERS

Conducted by the BRIGGS & STRATTON CORP. of Milwaukee exclusively for farm people was a "Quiz" Contest, winners of which have just been announced. The New York State winner was Mrs. Edward Hotaling, Jr., of Merrickville; and the prize was \$100.00 to apply on the purchase of a washing machine powered by a Briggs & Stratton 4-cycle gasoline motor.

Other northeastern state winners were: Mildred Bryant of Mansfield, Pa.; Wallace Virden of Elmer, N. J.; Faith Dutton of Harbeson, Del.; Mrs. Joe Craver of Kitzmiller, Md.; Mrs. Eva Betterley of Rockville, Conn.; Robert Wells of East Fairfield, Vt.; William Weston of Wilton, N. H.; and Mrs. Ida Wilbur of Franklin, Maine.

Five grand prizes were awarded, and the 53 prizes offered were valued at \$6,500.

The "Quiz" Contest was part of an effort to bring to farm homes without electricity the same modern conveniences and comforts that city people enjoy.

Flowers bloom the year 'round in California, and sidewalk flower stands dot the street corners. Folks who go on American Agriculturist's Western Tour (Feb. 24-March 18) will also have a chance to see plump Montana cattle grazing at an elevation of nearly 5,000 ft.; spring flowers in British Columbia; crops up and being cultivated in the Pacific Northwest; orange, olive, and date orchards in California; and the operation of important Pacific Coast industries.

Are You Coming With Us ?

*We'll See the Pacific Northwest—Canada—California—
Yosemite Park—Big Trees—All of Pacific
Coast—Old Mexico—New Orleans*

ON FEBRUARY 24—just about three weeks from now—our *American Agriculturist* party will be leaving this wintry east for the spring-like climate of the Pacific Northwest and California's golden sunshine. Time is so short now that we again urge all who are planning to go with us to make their reservations as soon as possible, in order that no one will be disappointed when the time comes to leave. Last year, we had to turn away some folks at the last minute, just because we did not have room for them. Remember that if anything should happen later to prevent your going, your money will be refunded; so you have nothing to lose by making your reservation now.

This year, as in former years, nothing has been overlooked for the complete enjoyment and comfort of those who go with us, and the memory of the places we'll visit will linger long. This time we will see *all* of the Pacific Coast, from British Columbia to the southern end of California, and at much less cost than a person could do it alone. Each day will bring something new and thrilling. First, the train journey from East to West aboard the Northern Pacific's "North Coast Limited", carrying us through Minnesota's 10,000 lakes region, North Dakota's farming and ranching lands, and across the Great Divide—days made memorable by congenial friends, comfortable sleeping and daytime accommodations, marvelous meals, and courteous service.

Reaching the blue Pacific, our first stop will be at the beautiful city of Seattle, where we will spend two days. While there, a high spot will be the boat trip across Puget Sound to the quaint old English city of Victoria on Vancouver Island. Pleasant days will follow visiting important West Coast cities and the countryside around them, filled with much of both scenic and agricultural interest. There, against backgrounds of lofty, snow-capped peaks, one sees the valleys blooming with roses, and crops up and being cultivated. Then down the coast to sunny California, to the Golden Gate, Mission Dolores, Yosemite and the Mariposa Grove of Big Trees, Los Angeles, Hollywood, San Diego; famous Riverside Mission Inn in the heart of the orange empire; and on to El Paso, Texas, and Juarez, Mexico, with a 24-hour stop on our way home in the

South's most fascinating old city, New Orleans.

We have heard from several persons this week who went on our last year's West coast tour. Among them, Miss Ethel Roberts, of Kennebunk, Maine, writes:

"Thanks for sending me your illustrated itinerary. The faces of those in the group picture of last year's party look like old friends to my sister and me. We are trying to get our brother to go with you this year; also I have a friend here who is interested in your tour. I get so excited every time I read over the itinerary. Makes me wish I could go again this time. Last year's tour was as nearly perfect as possible."

We know that you will feel the same way about this year's trip if you come with us. Make up your mind now to do so if you possibly can, and persuade some of your good friends to come along also. The cost of our "all-expense" ticket for this wonderful three-weeks' vacation is approximately \$325, and that includes every necessary expense, even tips. You will not have a single care on the trip—our representative will be along, and he will look after *everything*.

Some of you have written to ask about what clothes to take, how much baggage, etc. You will need heavy clothing when leaving and returning home, but while in California and the southland, the weather will be mild, so take along a lighter coat or suit also.

One or two bags or suitcases per person should be enough to take, as our stops at hotels on the coast are long enough to permit getting special laundry and pressing service.

We will be gone from Feb. 24 to March 18—just the right time of the year to miss Old Man Winter's meanest weather. If you have not sent for a copy of our attractive illustrated Tour Itinerary, write us for one today. Just send a postcard addressed to E. R. Eastman, Editor, *American Agriculturist*, Ithaca, N. Y. This itinerary gives full details of where we will go, names of famous hotels we will stop at, general information regarding the journey, exact cost from your nearest point of departure, as well as pictures of interesting and magnificent sights to be seen. Enclosed with the itinerary is a reservation blank, so that all you have to do to make your reservation is to fill it out and mail it with a deposit of \$5.00 (per person) to Mr. Eastman. Don't delay! Time is short!

For Quick Cough Relief, Mix This Remedy at Home

No Cooking. No Work. Real Saving.

Here's an old home remedy—your mother probably used, but, for real results, it is still one of the most effective and dependable for coughs due to colds. Once tried, you'll swear by it.

It's no trouble. Make a syrup by stirring 2 cups granulated sugar and one cup water for a few moments, until dissolved. No cooking needed—a child could do it.

Now put 2½ ounces of Pinex into a pint bottle, and add your syrup. This makes a full pint of truly splendid cough medicine, and gives you about four times as much for your money. It keeps perfectly, tastes fine, and lasts a family a long time.

And you'll say it's really amazing for quick action. You can feel it take hold promptly. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Thus it makes breathing easy and lets you get restful sleep.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its prompt action on throat and bronchial membranes. Money refunded if not pleased in every way.

Is Your Rupture HERE?

Why continue to suffer with rupture? Stop your worries and fears. Send for the facts about my perfected truss invention—the Brooks Appliance for reducible rupture—with the automatic AIR-CUSHION support that gives Nature a chance to close the opening. Thousands bought by doctors for themselves and patients.

Sent on Trial—Made-to-measure, individual fitting for man, woman or child. Low-priced, sanitary, durable. No obnoxious springs or hard pads; no metal girdle to rust. Safe and comfortable. Helps Nature get results. Not sold through stores—beware of imitations. Write today for full information sent free in plain sealed envelope.

Personal Problems

Help Him Overcome Handicap

Dear Lucile: Would I be doing a wise thing to marry a boy whose family has a very bad reputation in the community? He is a very fine young man who is well-thought-of by everybody . . . worked his way through high school, played on the football team and is everything a boy should be. He works in a drug store in town now, is not making a big salary but we could get along on it if we lived with his folks.

His father has been mixed up in some shady deals; one of his sisters has been the talk of the country and he has an older brother who has been arrested for drunkenness times without number. His mother is well-thought-of, but she is not really accepted in our "best society". People just sort of pity her.

I love this boy very much, and know we would be happy together. But I am afraid to marry him and move into his home. People would then start classing me with them; and wouldn't our children, if we have any, be born under a handicap?

What do you advise me to do?—*Afraid of Talk.*

Your problem is a big one, but first and foremost, I want to vote against your turning the boy down because of conditions which he cannot help. It would be cruel for you to give him such a slap, and would probably take all the heart out of him.

Would it be at all possible for him to go to a new location and establish himself, so that you could start life together where the influence of his family would not reach? That would be the best solution. Failing that, if you would wait until he is making enough to set up a home of your own, apart from his parents, I think you could make a place for yourselves in the minds of people in the community and the stigma attached to the name of his folks would not affect you.

Or, perhaps, you could marry and live at your home for awhile . . . show people that you and your family accept him for his true worth, regardless of his unsavory relatives. That should breed still greater respect for him in the minds of others.

* * *

Stop Inviting Them

Dear Lucile: What can I do in a case like this:

My husband and I live in the same town with a former sweetheart of mine, who married one of my girl friends after I turned him down. We have a little girl; they have no children. They often come to our house for an evening, sometimes invited, sometimes they just drop in. This man is crazy about my little girl. His wife does not like this . . . and my husband makes things very unpleasant for me after they leave, telling me that this man is still in love with me, and that he just makes over our little girl because she is mine.

I don't know whether this is true or not, Lucile; I have never encouraged him in any way, as I love my husband very much, and I invite them to our home merely through friendship, as we were all friends before our romances got mixed up. What should I do . . . quit inviting them? Or be unfriendly to them when they drop in of their own accord?—*Bewildered.*

If it makes trouble for almost all concerned (with the possible exception of the man, and likely his wife makes pointed remarks to him after a visit) it seems that it might be better for you to cease inviting them to your home. Do it gradually, so that it will not be so noticeable. If he notices it, explain to him your reasons. When they drop in without invitation, you must, of course, be friendly. Assure your husband that he has nothing to worry about . . . although this may not help much. Men are so often jealous of old suitors, even though they were victors in the race.

* * *

Ask the Preacher

During a marriage ceremony just when do the bride and groom exchange rings?—*Engaged.*

The minister will instruct you ahead of time on such points. It is well, even though you do not plan to have a big wedding, to visit him before the ceremony and have him give you a few pointers. Things are likely to go more smoothly.

Dance Etiquette

Can you give me some pointers about taking a girl to a dance? If she checks her coat in a separate cloakroom from mine, should I go with her to get it; otherwise she might not have money to pay the attendant. Also, should I introduce her to other boys to dance with, or dance all dances with her? Should I thank her for each dance? Is it ever polite for a boy to suggest sitting out a dance, if he's tired and his feet hurt?—*Uneasy.*

The separate cloakroom for men and women presents a slight problem. Girls usually carry along a bit of small change, so if she indicates a desire to go for her own things, you may feel free of responsibility. Otherwise, you may take her check and claim her things.

If the girl is in a strange crowd, it is more courteous to introduce her to a few of your best friends to dance with, even though she may be your "steady". Unless you particularly want to, you are not obligated to dance every dance with her so long as you see she is taken care of. In the case where you take the girl to the dance and devote most of the evening dancing with her, it is not necessary to thank her for each individual number. A boy needs to be tactful in suggesting that a dance be sat out; you can make it an excuse to buy refreshments, to visit with a group of friends who may be sitting out, or to just enjoy the conversation of your girl. You would never, of course, say that you were tired or that your feet hurt unless you knew the girl very well.

How To Relieve Misery of Your CHEST COLD

Massage throat, chest, and back with plenty of Vicks VapoRub at bedtime. Then spread a thick layer on chest and cover with a warm cloth.

VapoRub's double action brings double relief. It acts as a poultice to penetrate the surface skin; and its soothing medicinal vapors are breathed direct to the irritated air passages.

Try it, to loosen phlegm—to clear air passages—check tendency to cough—and also to relieve the tightness and soreness of chest muscles.

Kernels, Screenings and Chaff

By H. E. BABCOCK

AS WE approach the 1940 Presidential election the issues to be voted upon are gradually emerging. This is the way it should be. *It is the democratic process at work.*

Not Partisan Politics

My policy of keeping free of partisan politics will continue — but I do not consider *issues* politics at least until they are espoused by political parties. I shall therefore, from time to time, speak of issues which seem to me to be clear and worthy of consideration by the readers of this page. My object will be to get you thinking, *not to sell you.*

Future Course

The 1929 price break and the hard times which followed it resulted in private citizens delegating to the government a perfectly tremendous amount of authority for planning and managing the affairs of this country.

One issue and a big one in the coming election is whether or not you and I want to continue these grants of authority.

To be specific, do we want to continue *any* Secretary of Agriculture in command of the tremendous powers over farming which the present Secretary of Agriculture now exercises?

* * *

Poultry — 1940

Without intending to do it, *but simply by reporting the fact* that the returns on our poultry at Sunnygables in 1939 were very unsatisfactory, I seem to have stirred up quite a tempest. The letters have been pouring in.

Typical of the letters I have received is one from John V. Pearson of Greenville, New York. Following are some excerpts from Mr. Pearson's letter:

"During these New Deal years of grain manipulations to create higher prices for the farmer, the poultryman has evidently been left completely out of the picture..... I take it that the New Dealers have overlooked the poultry industry as a vote source.

"Bear in mind that I am not unaware of the fact that the government has helped. It has stepped in at various egg markets and purchased eggs, but only at times when the market price was practically down to cost of production. I admit that flock population is greater this fall, but with all this publicity about the increase in employment and better business conditions I am at a loss for an answer to the present downward trend of egg prices.

"If there was something wrong with the management of my flock, such as the lack of good production, I would not spend my time writing this letter. I would instead be out in the flock try-

As the years pile up at Sunnygables we get more and more pleasure out of the accumulation of pictures we take of our livestock and farm operations. For example, in the fall of 1936 we bought the two colts shown above with the idea of growing them out into a useful farm team. They were pretty thin and rough at the time, as the picture shows, and were not perfect mates. As the seasons have passed, these colts, now named Silver and Gold, have stuck around the farm and last summer they were put

into hard work. This winter they are still growing and gradually building up the good, hard flesh which Jake likes to take a year or two to put on the colts he breaks and drives for us.

There is nothing fancy about Silver and Gold, but there is the experience with them which makes farming a most satisfactory way of living, as well as a means (when it isn't too dry or something else doesn't come up) of making a living.

ing by some means to increase its production. Instead, the conditions we poultrymen have to cope with are really beyond our control."

* * *

Horned Heifers

It is our practice on our farms to run all the livestock loose we can. In fact, we have found no way of caring for livestock in the winter which compares in efficiency with allowing it to run loose in pens, which most of the time are open to the outside.

Under this system of management as I have previously indicated, we have come to believe that one feeding a day is practically just as good as more, so far as getting growth and condition on the livestock are concerned and, of course, the plan saves a lot of labor. When it comes to water for livestock housed in this way we really prefer it to be some distance away so that once a day at least the animals will take a good long walk to it. For water, nothing beats a good live spring which will not freeze over even in the coldest weather. We are fortunate in having two or three of these springs at Sunnygables in a protected piece of woods. How animals love to drink from them!

It is our observation that bedding is a most important factor in housing loose livestock. As I make my nightly inspections of our barns I have noticed this winter that on the days when we bed down our pen of fifty Hereford yearling heifers with fresh straw I will sometimes find all of these heifers

lying down by ten o'clock at night and a considerable percentage of them stretched flat on their sides. As the bedding gets damp and dirty I find fewer heifers lying down and none at all stretched out.

I am very sure from our own experience that there are a good many farmers going into the loose housing of livestock in the Northeast who are going to be disappointed in the results, simply because they are not in a position to keep their pens covered with dry bedding.

About the only trouble we have with the loose housing of cattle comes with dairy heifers. Beef heifers—even the horned Herefords—never give us any trouble, but every once in a while a Guernsey or Holstein heifer will come along which gets very mean. Handling such animals is a problem without resorting to dehorning.

When we see a boss showing up in a pen we first try, if possible, to shift her into a group of larger animals so she will get a good trimming. But this doesn't always work. Sometimes the heifer to be disciplined cleans up and then we have a really mean animal to handle.

Hank has tried wiring such heifer's horns together. One time we tried knobs on them, but as yet—short of dehorning—we haven't solved the problem of controlling them. This problem, by the way, is especially fresh in our minds right now because the other night a Guernsey heifer in a bunch of two year olds went on a rampage and pretty well cut to pieces one of her

pen mates.

I wonder if anyone has solved the problem of the mean horned heifer in a bunch of loose livestock?

* * *

Hitler, the Hog

From time to time I have reported here on outstanding characters which have developed in the animal world at Sunnygables. If you have been a constant reader of this page you may remember Mamma, the Dorset ewe, and Sunnygables Somersault, the bucking pony, and other animals, which have distinguished themselves enough by conduct, either regular or irregular, so that I have told about them here.

Now, a new one has come along. He is Red the Boar. Red is supposed to be just a two-year old purebred Duroc, but he is fast developing such a Dictator complex that we have decided to call him from now on, "Hitler the Hog".

Up to the present time, despite the fact that the local veterinarian gave him some pills, which put him to sleep, and sawed off his tusks, Red has cleaned up pretty well at Sunnygables, his latest stunt being to boost a 1500-pound brood mare clean over a rail fence. At present we are searching our inventory for some animal on the farm which will wade in and teach this Hitler of the animal world a lesson.

At present the best bet seems to be Jim the Jackass. If it were legal to solicit bets through the mail I might invite the readers of Kernels, Screenings and Chaff to pick the winner and back their opinions.

Sad Comedy

Some sharpeners missed their calling — they are born comedians. For example the Eureka Agency of New Orleans put the following advertisement in several papers:

WHY DIE? SPEND 24c AND LIVE
16 Chemical Elements which wear out, keep humans living; replace 'em by eating 3 items grocers sell at 1c each. I'll name 'em.

Those who sent in money received the following:

"Who eats an Egg, Orange and Carrot, all raw, per diem, gets the 16 Chemical Elements it takes to keep a Human alive. Thanx. Come again soon and stay longer, sez The Eureka Agency."

The Post Office Department recently issued a fraud order, denying this firm the use of the mails.

Other concerns against which fraud orders were issued are: Samuel E. Edmunds of Charleroi, Penna., who advertised a diabetic treatment which, upon analysis was found to contain a well-known saline laxative. The Anatone Company which advertised a product claimed to overcome all kinds of constipation. Analysis proved the product to be a cathartic which might be harmful and in some cases, dangerous. The Biochemistry Company of New York City advertised a product which was supposed to grow hair quickly and permanently on the heads of all bald users.

* * *

Unordered

The unordered merchandise nuisance seems to run in cycles and right now it appears to be on the up-trend. The surest way to stop the nuisance is to make it unprofitable. If you receive merchandise you did not order, you are under no obligation to accept it or to

return it to the company and if any argument comes up you are within your rights to demand payment for storage. Some sending of unordered merchandise is done under the guise of charity but it is my guess the only charity involved is to the promoter. If everyone knew their rights and exercised them, the amount of unordered merchandise sent through the mails would decrease rapidly.

* * *

Stock Promoters Stalled

For some time there have been inquiries about the value of stock in Lewis American Airways of Denver. Recently two stock promoters, Pratt and Derringer, plead guilty to charges of using the mails to defraud, in violation of the Securities Act at Denver, Colorado. Charges are a result of their activities in promoting the sale of stock in Lewis American Airways.

* * *

Friendly But Costly

"Several years ago I signed a note with a man. He never paid anything on it. The bank continues to send me a new note to sign when the note comes due. What can I do to get my name off that note?"

I am afraid the answer is *nothing* — if you refuse to sign, the bank can demand payment from the man who gave the note and if they cannot collect from him, they can demand payment from you and take legal action to force payment if necessary. Many persons feel that it is unwise to act as co-signer to a note. Doing so is a nice friendly gesture but it is likely to cost you money. Banks do not require co-signers on a note unless they are doubtful of the ability of the first signer to pay.

* * *

Missing

Mr. Albert W. Kingsland has been missing from his home in Rutland, Vermont, since December 13. Following is a description of Mr. Kingsland: age, 65; height, 5' 8"; weight, 140; light, sandy hair, sparse on top; slightly hard of hearing; wears shell-rimmed spectacles; false dentures; uses good grammar in a rather deep voice; dressed in old clothes and having, possibly, a small Masonic pin in the lapel of coat.

If anyone knows where Mr. Kingsland is, his family would very much appreciate the information. Send it to this office, *American Agriculturist*, P. O. Box 367, Ithaca, N. Y., and we will forward it to them.

* * *

We would like to communicate with Mr. John Rich, farmhand, who was working in Cortland County last year. If any of our readers know where Mr. Rich is now located, we would appreciate the information.

Because

Mr. Clark Carried the New Policy Covering Trucks

MR. CLARK carried the \$1.00 policy, but when it expired he decided to get the new policy so he would have more protection. Mrs. Clark mailed in the \$2.00 on Aug. 14, the policy was issued Aug. 16 and at 10:30 a. m., Aug. 17, Mr. Clark was killed when his truck crashed. He leaves his wife and their two sons, ages 3 and 4 years.

Attorneys Melvin & Melvin, who are helping Mrs. Clark settle up the estate, wrote us saying: "It was a great blessing to Mrs. Clark and the children that Mr. Clark carried this policy. They appreciate your prompt service and cooperation."

Let Us Help You

The following bulletins have been prepared by *American Agriculturist's* Home Editor, Mrs. Grace Watkins Hockett, and they are available to any reader without cost other than 3c each to cover mailing and mimeographing costs:

- ☐ No. 3—Apple Recipes. This bulletin contains many unusual apple recipes that will appeal to your family.
- ☐ No. 4—Protective Foods. Tells what foods help to keep you and your family in good health, and contains a week's supply of sample menus showing how easy it is to plan healthful meals.
- ☐ No. 5—School Lunches. Has lots of suggestions for keeping the children's lunch boxes filled with healthful, appetizing, easy-to-prepare lunches.
- ☐ No. 6—Home Canning and Curing of Meats. Tells how to stock your shelves with delicious, ready-to-serve, "home grown" meats. Directions are easy to follow.
- ☐ No. 7—Chopped Meat Recipes. Contains 5 pages of recipes for tasty, economical meat dishes. A big help in solving problem of what to do with left-overs, as well as helping with the job of cooking inexpensive meats in an appealing way.

How to order these bulletins: Check the ones you want, include three cents for each one desired, and return this coupon to *American Agriculturist*, Box 367-H, Ithaca, N. Y. Be sure to give your name and address, and write plainly.

THE G.L.F. PAGE

The basis of a sound business cooperative is voluntary use by fully informed patrons

1. Get Good Chicks

The ability to lay 100 eggs or 250 eggs a year is born in the chick. Once you have the chicks you can't improve on them—you can only manage them to get the most out of their inherited ability.

START CHICKS RIGHT

How to Get Chicks Off to a Good Start...Told in Pictures

COOPERATIVE G.L.F. EXCHANGE, INC. ITHACA, N.Y.

6. Watch Ventilation

Give the chicks plenty of fresh air. Try to have three sides of the brooder house air-tight, and ventilate by opening and closing the windows in front of the house. Cold drafts, overheating, or chilling are harmful to chicks.

2. Have House Clean and Warm

Sweep thoroughly, brush and disinfect walls. Scrub and disinfect feeders and fountains. Put down fresh litter. Let brooder stove run a day or two before chicks arrive.

4. Have Feed and Water Ready

Feed and water should be warm and ready for the chicks when they go into the brooder house. G.L.F. Starting & Growing Mash is balanced and complete. The chicks need no other feed until they are 4 to 6 weeks old.

7. When to Feed Grain

At four to six weeks start feeding a little G.L.F. Chick or Intermediate Scratch and some grit. Gradually increase the amount until at 12 weeks the chicks are eating half mash and half grain.

3. Avoid Crowding

Figure at least one square foot of floor space for each three chicks—400 chicks in a 10'x14' house. Allow enough hopper space so half the chicks can eat at once—a 4-foot hopper for each 100 chicks.

5. Correct Temperature Important

Temperature at outside edge of hover should be 95° at start. Drop temperature about 5° a week. Chicks should be able to run out for feed and exercise, then back under the hover to get warm.

8. More Space as Chicks Grow

Chicks need more space as they get bigger. At four to six weeks separate the cockerels, thus giving the pullets twice as much room. If you have sexed chicks, put half of them in another house.

THE FARM PAPER OF THE NORTHEAST

MORE OF *"Living"* LESS OF STRAIN and STRESS

By J. H. Frandsen

• • •

IT WAS BACK in the late 80's, the year when this country had its first flu epidemic—Spanish Lagrippe I think they called it then. We children were all young and in our most impressionable years. Many exciting things confronted us from time to time, some of which gave mother her opportunity to teach us the need for self-discipline and help us to acquire the proper perspective of events as they affected our young lives. The epidemic gave her at least one good opportunity, still vivid in my memory.

This particular autumn father was confined to bed with a knee injury and the extra burden naturally fell to mother. There were many acres of corn to pick, milking, and many other chores to be done not only once but twice a day. Mother's mainstay for this work on the large farm was a young "Newcomer". He was a good worker but temperamental. His thoughts were either soaring in the clouds or touching the depths of despondency; if the latter, it was up to mother to do something about it. Usually she was equal to the occasion, but there came an evening when I saw her common sense put to an exacting test.

For several days the hired man had complained of a toothache—no ordinary toothache this—but "the kind that kills people", he said,

You are not really living unless you take some of the strain and stress out of life by play and recreation.

Perhaps it was bad for I remember that it did not yield to the usual home remedies on which most folks at that time relied. So it was decided that he take half a day off from corn picking to go to the doctor. The town had no dentists in those days.

At the supper table we children naturally were "all ears" to hear what had happened at the doctor's. Imagine our consternation as the following tale unfolded.

To mother's question—had he finally had nerve enough to have the tooth out?—his reply was that he had gone to town fully intending to have the tooth pulled. In fact, he had gotten almost to the doctor's office when he met several persons who told him that the Lagrippe was coming to town. It was almost there. It would miss no one and most people would die from this terrible disease. He hadn't waited to hear more, but dashed for the team and wagon and drove homewards as fast as the horses would go. Out here we were at least that much farther from the awful germs

which they told him were in flying pursuit—millions of them. If one had to die anyway, why go through the extra pain of having a tooth pulled?

To mother's second question—had he brought the groceries as she had asked him to?—he replied, "Groceries! Who will care for groceries? We are all going to be sick! No need for groceries!"

Well, we children lost our appetite for supper as we listened to this story. Mother, at first non-plussed, soon regained her usual composure and when it was her turn to speak, she began by telling us of the folly of being too gullible, too emotional, and of running away from disagreeable tasks. She told us of the joy and satisfaction we would feel in occasionally choosing to do a piece of work which we most disliked—and doing it well. She pointed out that "blue" days, days of hard work, and sickness might come to every one but that somehow in well ordered society, crops must be planted and harvested, children cared for, and other tasks done, that each must do his part willingly and cheerfully, and trust in God for the outcome.

This bit of wholesome philosophy has stood most of us in good stead as the years have gone by, and I feel sure the young man profited by it as much as we. Incidentally, in due time we had our tussle with the then strange disease—all except that temperamental young man. In spite of his fear he entirely escaped it, and eventually he even had the tooth out.

By experience we have learned that "come what may the show must go on". To accomplish any thing much worth while we must not become too absorbed in or excited about problems beyond our control, be it war, politics, or what not. Rather we should strive to steer a common-sense course and develop such a philosophy of living as will bring cheer and comfort to those around us and maximum strength, efficiency, and cheerfulness to ourselves. Such a philosophy stresses the simple things of life, which in this age seem often to have been forgotten. This brings to mind the following rules for sane and simple living which I have seen published somewhere:

1. Learn to keep your wants simple and to like what doesn't cost much.
2. Learn to like plain wholesome foods and plain service.
3. Learn to like trees, (Turn to Page 27)

A TRACTOR FOR EVERY PURPOSE, SEE PAGE 5.

—Land that makes Men Free—

IN BLEAK December of 1620 the Mayflower Pilgrims landed at Plymouth, half-starved and poorly clad. Of 102, only 51 lived until spring. But for 20 acres of Indian corn they grew the next summer, famine would have finished the rest . . . but for their bravery and fair dealings, hostile savages would have taken their scalps. Their courage, their faith, their stubborn determination built the first permanent white settlement in New England . . . a new land of freedom.

Plymouth was 15 years old and a colony of perhaps 300 souls when the good ship Hercules dropped anchor a few rods off Plymouth Rock. Among its passengers was Thomas Hayward, a farmer and an Englishman. Like those he joined at Plymouth, he risked an unknown world to bring up his boys in simple reverence, in a land of new opportunity.

Thomas and two other men — a preacher and a miller — bought a tract 20 miles west of Plymouth. For a piece 14 miles square they paid Massasoit 7 coats, 9 hatchets, 8 hoes, 20 knives, 4 moose skins, and 10½ yards of cloth. Just east of what is now the square in West Bridgewater they built their cabins. Theirs was the first settlement in the interior of the Old Plymouth Colony.

For Thomas and his boys, grain was wealth and corn was the equal of money. Out of the wilderness they carved a home. Out of the land they lived. Like the rest of Plymouth Colony, the Bridgewater settlers

Layton and Howard Hayward are the 10th generation of Haywards on this farm — a chain unbroken for three centuries. The present home was built in the late 1700's.

were independent in faith, and unfailing in worship. As was their right and their task, they set up a government; and the pattern they set is still the model of democracy.

The first Hayward lived to see the passing of good Chief Massasoit, and the coming of warlike Philip. Thomas and five generations of his kin had to fight for their freedom . . . first with the Indians, then with the French, then with the Mother Country.

Thomas' land — now 100 acres — is tilled today by the tenth generation of Haywards. As it has been most of the time in the past, it is free and clear. Its soil is as fertile as ever. Where Thomas grew Indian corn, the present generation grows silage corn. Where he

kept cattle for meat, they keep cattle for milk, and retail it to the neighbors. Close to Boston, Plymouth County's milk, eggs, and vegetables today bring premium prices.

Through three centuries, ten generations of Haywards have held with clear, cool purpose to the simple rules of live and let live. Thrift, perseverance and hard work still point their way to freedom and success. After three centuries their farm in Plymouth County, Massachusetts, is still the land that makes men free . . . America is still the best place in the world to live . . . the Northeast is still a good place to farm.

*An Expression of Confidence
In Northeastern Agriculture*

* * *

Famed for its industry and commerce, the Northeast is also an intense farming area. Small in size, it has a dense population. Half the farms of New England, New York and New Jersey are owned free and clear. Of the others, some 30,000 are using Federal Land Bank mortgage credit. Facts and figures on the Northeast are given in a bulletin entitled "The Northeast is a Good Place to Farm." Details on Land Bank mortgages are given in a folder called "Farm Mortgage Loans through the Federal Land Bank." You may have a copy of either or both.

For the Home Fruit Gardener

Setting Strawberries

When strawberry plants are purchased, the sooner they are put in the ground the better, assuming of course that conditions are reasonably favorable. One practice that helps is to put the roots in water for some time—perhaps over night.

Particularly if the weather is at all warm, strawberry plants should not be left packaged for any length of time as they may heat. For a relatively short period, a satisfactory way of handling is to take off the top of the crate or package and loosen the plants but still keep the roots covered with the packing material. If they cannot be set out the day after they are received, heel them in by digging a v-shaped trench. Open the bundles, spread the plants out in a thin layer with the buds just even with the surface of the ground, and then firm the soil against the roots. Be sure the plants are well watered.

When setting, it is important to get the plants in the ground at the same depth as they were in the original seed bed. You will have a heavy loss of plants if you set them either too deep or too shallow. Put them out in rows about 4 ft. apart and from 15" to 24" apart in the row.

* * *

The Newburgh Raspberry

One of the most promising new raspberry varieties is the Newburgh, developed at the Geneva, N. Y., Experiment Station. The fruit is large and unusually firm, and the variety is not troubled with mosaic. The Newburgh ripens four or five days earlier than Latham or Cuthbert.

The canes are of medium height, but fruiting laterals are rather long. The canes branch freely the first year, but tend to outgrow the habit as they grow older. The Newburgh is recommended for trial both for shipping and main crop variety. It is not particularly desirable for jam, and some other varieties are better for canning.

* * *

Spring Pruning for Raspberries

If red raspberries are not pruned, the patch will soon develop into a mass of suckers with little or no production of fruit. Common practice is to cut out the old canes after the harvesting season. Then in the spring after severe weather has passed, the fruiting canes are cut back to a height of 4 or 5 feet, depending somewhat on the vigor of the canes. The ideal is to cut the canes back just enough so they will remain erect with their load of fruit.

Branches are usually cut back to about 10". Severe heading back of side branches has several disadvan-

ages. The crop is reduced, but the size of the berries on the remaining branches is not increased. Also remember that fruit on the laterals of severely pruned canes ripens somewhat later than on moderately pruned canes. During the growing season the new shoots should not be headed back.

* * *

Cross Pollination for Pears

Practically all varieties of pears are self-sterile or nearly so, and in order to get good crops must be pollinated by pollen from some other variety. Two important commercial varieties—Bartlett and Seckel—are inter-sterile; that is, they do not pollinize each other satisfactorily. In planting these varieties, use some other varieties for cross-pollination; or if you have bearing trees of Bartlett or Seckel in solid

blocks, some can be top-worked with Bosc, Kieffer, Anjou or Clapp Favorite.

* * *

Controlling Black Knot

Black knot is a serious disease of plums, prunes, and sometimes cherries and winter is an excellent time to start a campaign against this disease. Before growth starts, remove all of the knots by cutting at least 4" below the base of the swelling. It is possible to make cuts closer during the winter than it is after growth starts. Burn all of the knots pruned off immediately as otherwise they may spread the disease. Where knots are found on large branches, cut out the knotted tissue for 1/2" beyond the boundary of the knot. It is not necessary to go very deep into the limb.

Some time about the last of May, look the trees over again and remove all knots that were missed in the first pruning.

The second step of control is to spray just as the buds are breaking out, either with a 1-8 lime sulphur spray, or with a 6-12-100 Bordeaux oil emulsion

spray containing 3 per cent of lubricating oil. On prunes the Bordeaux oil emulsion spray also controls red mites, which is an advantage.

* * *

Storage Scald of Apples

Storage scald is one of the most common troubles affecting stored apples and is particularly severe on R. I. Greenings, Rome Beauties, Cortlands and Baldwins. It has been found that storage scalding can be controlled by putting about half a pound of shredded paper impregnated with mineral oil into each container. Naturally this adds to the cost of storage but is good insurance against losses from storage scald.

In general, storage scald is more troublesome when apples are picked before they are fully mature, where apples are thinned heavily, and, in the case of most varieties where nitrogen has been applied to excess. In most orchards, however, the problem is to apply enough nitrogen rather than to worry about the possibility of using too much.

Now! BETTER FENCE Backed by Pittsburgh's CERTIFICATE OF SPECIFIED QUALITY

Don't guess about your fence purchases any longer! Know what you are buying—insist on Pittsburgh's CERTIFIED QUALITY Fences and Close Mesh Fence Fabrics. Only then can you be sure of getting fences made to the following minimum high quality standards:

- Genuine copper-bearing steel of special analysis for fence purposes.
- Coated with the purest, ductile, non-cracking zinc available, for longest life.
- Zinc perfectly bonded to steel by the hot-coating charcoal-wipe process.
- A premium zinc coating, not only heavy but also uniform, demonstrated by laboratory tests.

The resulting fences are as brilliant in performance as they are in appearance. You can have the advantages of these definitely better fences at ordinary fence cost. The Certificate of Specified Quality assures plus values for you! Write today for your specimen copy of the certificate; then make sure your fence dealer gives you this quality of fences.

When you buy the land you buy the stones;
When you buy the meat you buy the bones.
—Old Country Saying.

Public is Aroused About Taxes

ONE OF THE most discouraging set of facts showing what government spending and taxation are doing to all of us has been brought out by Samuel Crowther, famous author and business analyst. Mr. Crowther was hired by a New Hampshire State Commission, which was created to promote the wealth and income of the State. Mr. Crowther found:

1. That the Federal Government spent \$15,352,000 in New Hampshire in one year (1936) more than it collected. But the State's share of the Federal debt gained \$18,000,000 in one year, so that the State had a deficit in the matter of Federal gifts, and what is usually considered a gift was just more debt.

2. That the indirect or hidden taxes in New Hampshire were greater than the direct taxes. They laid a burden of 10.8c on every consumer's dollar, while the direct taxes amounted to only 7.1c. Therefore, Federal, State, and local taxes in New Hampshire amounted to a total of 17.9c on every dollar.

Mr. Crowther concluded that the cash income received by the people as individuals is being redistributed by taxation, but the redistribution is downward. Both lower and higher income groups are sinking.

The same or a worse tax situation prevails in every State, and farmers have more taxes to pay and less to pay with than anybody else. For nearly 20 years I have been calling the attention of *American Agriculturist* readers to the increasing danger from constantly growing taxes. At last the people are getting awake. There is a rising tide of public indignation against government spending, and I hope it keeps on rising until the orgy of government spending of recent years is summarily stopped.

In this necessary program of reducing taxes, it will take great judgment and wisdom to do it fairly and without making a bad matter worse. For example, in New York State tax reduction groups are doing a grand job in arousing the public and in insisting with Albany officials that there must be no increase in taxes. If, however, any large reduction in the State budget is taken out of direct State aid for schools and roads, farm taxes will be increased rather than decreased, because then the localities will have to pay what the State doesn't.

On the other hand, school and road officials are charged with the responsibility of cutting their own budgets. If they don't do it, others will do it for them, and maybe unwisely.

We have reached the place in this tax business where our whole economic welfare is at stake. There must be no new appropriations, no new taxes, and every public job now under way should be closely studied to see if it cannot be cut out or cut down without greatly impairing efficiency.

What's in a Name?

THERE'S a dollar in it for you if you find your own name and address in *American Agriculturist* according to the rules of our new game. Listen! Scattered through this issue of *American Agriculturist*, and at least for a time

through future issues, are names and addresses of A. A. subscribers, picked at random from our circulation lists. Look through both the advertising and editorial columns carefully, and if you can find your own name and address (or if your friends find it for you), write us not later than one week after date of issue, giving the page number and date of copy of *American Agriculturist* in which your name and address occurred, and we will send you \$1.00. The name and address must stand alone and have no connection with any article, report of meeting, or advertisement.

The purpose of this new game is to make some fun for you, and possibly to get you to read *American Agriculturist* more carefully. Remember that to collect the \$1.00, you must let us hear from you, not later than one week after the date of the issue of *American Agriculturist* in which you find your name. Address letters to *American Agriculturist*, Department N, Savings Bank Bldg., Ithaca, N. Y.

Plastics and the Farm Market

INTO MY OFFICE a spell ago came one of those men who are doing so much to promote the real progress of mankind—a research scientist, Dr. D. C. Carpenter of the Geneva, New York, Experiment Station staff.

He proceeded to cover the top of my desk with various and sundry colorful articles of all shapes, sizes and descriptions, all made from plastics, those new materials which many people believe are due to work wonders in our economic life. Plastics are made from casein, cellulose, and from synthetic combinations.

Already articles from plastics are in common use. From them come dishes of various kinds, camera cases, transparent windows for cars and airplanes, buttons, buckles, penholders, beautiful costume jewelry, and dozens of other articles. Dr. Carpenter showed me a plastic thread, fine and soft as silk, and defied me to break it. From

Workers in the factory at Bainbridge making buttons out of plastics from casein in skim milk.

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

this thread the DuPont Company are making women's stockings, said to be difficult to wear out. What a break for women, some of whom go without the necessities of life to keep themselves in silk stockings!

At Bainbridge, New York, a factory is doing a sizeable business in plastic buttons and other products, made from casein from skim milk. It is said that could a shorter and cheaper process be found, skim milk would be worth \$3 a hundred, and there would be plenty of demand for it for plastic manufacturing. Think what that would be worth to the dairy industry! Dairy-men wouldn't care whether they sold fluid milk or manufactured it.

There are similar possibilities for taking up other farm surpluses by plastics. The trouble is, not all the problems have been solved. More research is needed. Plastic manufacture, particularly from skim milk, is still too expensive. It takes too long to harden the casein plastic before it can be used. Many plastics are too brittle, and break on the least provocation. Others have a disagreeable odor. All these and other problems must and can be overcome. That is where the research men come in.

Instead of spending billions on questionable schemes to help agriculture, the real way for government to help is by more support of scientists to find new ways to use farm surpluses. Skim milk for plastics is a good example.

Cold Weather for Pruning

IT MAKES a fruit grower shiver even to think of doing any pruning this winter. But there are sure to be some warmer spells before spring opens up, and anyway, maybe you don't have to prune this year.

Experienced growers say that orchards which were well pruned last year, and had a heavy crop last summer, need not be pruned this winter, especially if the indications are that the crop will be light this coming fall. This will not only save time and work and the shivers, but pruning is one way of thinning the crop preceding the heavy or "on" year.

However, if the orchard looks like a big crop for 1940, probably better get out the old pruning tools and watch for a mild spell. And that applies especially to peaches and cherries, which need careful pruning every year.

Eastman's Chestnut

THERE is a story going the rounds about Irv Ingalls, advertising manager of *American Agriculturist*. It seems that when Irv was younger, he went to call on a girl friend. They had been sitting in the swing in the moonlight alone. No word broke the stillness for half an hour until—

"Suppose you had money," she said, "what would you do?"

Irv threw out his chest, in all the glory of young manhood. "I'd travel!"

He felt her warm, young hand slide into his. When he looked up, she had gone. In his hand was a nickel!

A TRACTOR

for Every Purpose

LAST SUMMER I was visiting with a boy, some 12 years of age, in the farm neighborhood where I live in the summer time. All day long he had been driving a tractor hitched to a big harrow. I said to him:

"Aren't you awfully tired?"

"No," said he, "it's fun!"

I could not help but contrast his feelings toward that job with the way I used to feel after I had been driving a poor farm team hitched to a drag. I cannot remember any more tiresome or monotonous job than walking on soft ground urging a tired team along for a ten-hour day. Because for so many years I did work with and worry about horses, I have been glad to see better and more efficient power come to the farms in the form of trucks and tractors.

On those farms where there is plenty of hay and where the farmer can raise grain easily and cheaply, there is still a place left for horses. There are also some men who hate machinery, who have no ability to make small repairs, and who like horses. Such men should still drive them. On the other side of this picture, however, are the thousands of mechanically-minded boys and men, now in the great majority, who would soon grow tired and sick of the farm game were it not for their interest in mechanics. Machinery has increased the interest in farm work a hundredfold. If you are past fifty years old and don't believe me, just recall those weary hours you spent as a boy turning the grindstone, or using every spare hour on the end of a cross-cut saw in the wintertime, or those long hours hoeing potatoes by hand.

Those who find fault with tractors are often those who don't use them with judgment. The same applies to the automobile. The trouble is not with the automobile or tractor but with the drivers. Ride over this farm country any time, winter or summer, and see the tractors that are left outdoors from one month's end to another. How many men there are, also, who will climb upon a tractor and drive it, without any attention to oil or grease, until it stops dead with a burned-out bearing. How many will let little unusual warning noises go, something that probably could be easily repaired if the man would take the time to stop and look over his machine. Men

make the mistake of trying to do too much with tractors also. Just because a farmer has the power to do it, why should he turn his whole farm over, thereby increasing the surplus and probably not his profit? Tractors are not to blame for errors in human judgment.

When tractors first came they were rather heavy and large for eastern farms, or for work on hills. But now there is a tractor for every farm and for almost every farm job.

In his "History of the People of the United States," McMaster, the great historian, said:

"The Massachusetts farmer who witnessed the Revolution cleared his land with a wooden bull plow, hauled by oxen, sowed his grain broadcast, and when it was ripe cut it with a scythe and threshed it out on his barn floor with a flail. The poor whites in Virginia in 1790 lived in log huts, with the chinks stuffed with clay. The walls had no plaster, the windows had no glass, the furniture was such as they themselves had made. Their grain was threshed by driving horses over it in the open field. When they ground it, they used a rude pestle and mortar or placed it in the hollow of a stone and beat it with another."

I like to think of the change in the standard of life of our people that has taken place in the comparatively brief period since those times described by McMaster, a change which has been due chiefly to machinery and to the development and application of better power to run it.

E. R. EASTMAN.

One of the newest developments in farm machinery is a small tractor designed to pull one plow bottom or to do other work commonly done by a two-horse team. This one is an Allis-Chalmers.

The Oliver Row Crop 70 pulling a double bottom 16 inch plow through oat stubble.

Where stationary power is needed, a tractor like this Case "Flambeau" will do all you can ask of any power unit.

This John Deere tractor will haul two plow bottoms all day without a let-up.

Paul Stiefbold, National Plowing Champion for 1938, and his Ford tractor.

Moving the power plant to one side gives the operator of an I. H. C. Farmall a chance to see where he is going.

When the weather is right, in goes the corn crop with this Massey-Harris tractor.

(BELOW): Planting 35 acres of vegetables a day with a Caterpillar tractor on the farm of Walter Langdon, of Malone, N. Y.

"I NEED BIGGER MOUTHFULS"

ANIMALS grazing on scant pasture can't be expected to bring you the greatest profits of which they are capable. Pasture is a crop and should be treated as such. Good management will include the use of high potash fertilizers to increase the yields of clovers, lengthen the grazing period, and reduce barn feeding costs.

Most pasture soils are low in fertility. Fertilizer analyses in the 1:1:1 and 1:2:2 ratios, applied in amounts to supply 25-50 lbs. of nitrogen and 50 lbs. each of phosphoric acid and potash, are recommended. Consult your county agent or experiment station about the plant-food needs of your soils. See your fertilizer dealer or manufacturer. You will be surprised how little extra it costs to apply a complete fertilizer.

Write us for free booklet "The Cow and Her Pasture."

More Potash means More Profit

AMERICAN POTASH INSTITUTE, INC.
INVESTMENT BUILDING WASHINGTON, D. C.

CHILEAN NITRATE OF SODA

the natural nitrate for your crops

FOR BETTER YIELD and better quality use Chilean Nitrate of Soda for your crops. It is the natural nitrate fertilizer—the only natural nitrate in the world.

Chilean Nitrate is guaranteed 16% nitrogen. It also contains, in natural blend, small amounts of other plant food elements—protective elements such as iron, manganese, magnesium, boron, iodine, calcium, potash, zinc, copper and many more. These protective elements act much like vitamins in their effect on your crops.

Use Natural Chilean Nitrate. It is well suited to your crops, your soil, your climate. No price increase this entire season, and there is plenty for everybody's needs.

NATURAL
CHILEAN NITRATE OF SODA

Better Potato Stands

By FORD S. PRINCE,
New Hampshire College of Agriculture

COUNTS of potato stands at digging indicate that plants are spaced much farther apart in the row than they were supposed to be, judging by the way the planter was set to drop the seed pieces.

These counts, made in fields of men making the New Hampshire 300 bushel potato club, showed that plants in all fields averaged slightly more than 15 inches apart while planters had been set to drop the seed at 11 inches. Yields of growers whose plants stood 15 inches or less in the row were 413 bushels, while those whose plants were more than 15 inches made but 347 bushels per acre, a gain of 66 bushels for the shorter spacing.

It may not always be possible to produce even stands of potatoes. Furthermore, soils vary with respect to the correct spacing of plants in the row. But with the data cited as a background, it seems advisable for a farmer to bend his energies toward securing a good stand of potatoes, at somewhere near the optimum point for the soil of his farm.

Faulty seed cutting, especially with a mechanical cutter, often causes the trouble. If such a cutter is used, the knives should be adjusted so that uniform sized seed pieces will be secured. Unless care is exercised with a mechanical cutter slivers of potatoes, many of them without eyes, will be sliced off and these, instead of good seed pieces, will be dropped. Hand cutting is the more certain method because each potato can be looked over and the proper number of eyes cut with each seed piece. Hand cutting takes more time, of course, but it does give the grower an alternative.

Setting the planter for closer spacing is another method of getting better stands. If a grower's stands have not been satisfactory with a twelve inch setting, he should reduce the spacing to adjust for the possibility of skips in the stand or for too great distances between plants. The latter method will result in using more seed per acre which in many cases is desirable.

The modern planter places the fertilizer in the soil in bands on either side and on a level with the seed piece, supposedly far enough away from the seed pieces to avoid fertilizer burn. Even with fairly good placement, burn will sometimes occur, especially if the soil is dry at planting time. Under this condition the grower should attempt to get the fertilizer an inch or so below the seed piece level and as far away from the seed piece as the fertilizer tubes will allow, thus avoiding burn due to any lateral diffusion of the soluble fertilizer salts.

Such precautions as these should result in better potato stands, better yields per acre, more economy in operations and greater profits. A poor stand takes just as much fertilizer and spray material as well as labor except handling the extra potatoes that are produced by a perfect stand.

Picker planters are now used in great numbers, while those farmers who use "assisted feed" planters just wouldn't have a picker type on the farm. Many growers use mechanical seed cutters while others have tossed them up attic or still cut the old fashioned way. Too often the machine is blamed when it is really the operator that is at fault.

Market News by Radio

Following is the schedule of New York State radio stations giving market reports as furnished by the Market News Service of the New York State Department of Agriculture and Markets:

WEAF, New York City, 660 K.C., 12:50 P. M. daily except Saturday—New York City market on butter, poultry, eggs, rabbits, calves and hay.

WOR, Newark, 710 K.C., 6:30 A. M. daily—Crop prospects and market news on fruits and vegetables in northeastern states.

WFAS, White Plains, 1210 K.C., 11:30 A. M. daily except Saturday—New York City market on butter, poultry, eggs, rabbits, calves and hay.

WGNV, Newburgh, 1220 K.C., 8:45 A.M. daily—Report on Newburgh and Poughkeepsie markets on fruits, vegetables and miscellaneous farm produce.

WABY, Albany, 1370 K.C., 11:40 A.M. daily—Albany market on fruits, vegetables and eggs, and a brief summary of the New York City fruit and vegetable market.

WGY, Schenectady, 790 K.C., 12:30 P. M. daily—Albany and New York City markets on fruits and vegetables. 5:45 P. M. daily except Saturday—New York City egg market and poultry, butter, cheese and miscellaneous produce.

WFBL, Syracuse, 1360 K.C., 6:20 A. M. daily—Broadcast direct from Central New York Regional Market.

WSYR, Syracuse, 570 K. C., 1:15 P.M. daily except Saturday, Tuesday 1:30 P. M.—Syracuse Regional Market on fruits, vegetables and miscellaneous produce, and also brief summary of Rochester and New York markets.

WHAM, Rochester, 1150 K.C., 7:30 A. M. daily—Special potato and peach re-

ports, shipping-point information, and during winter months report on Rochester Public Market.

WSAY, Rochester, 1210 K.C., 12:50 P. M. Saturday—Summary of conditions on Rochester Public Farmers Market.

WHEC, Rochester, 1430 K.C., between 4:15 and 5:00 P. M. Tuesday, Thursday and Saturday—Price reports on fruits, vegetables and farm produce on Rochester market.

WKBW, Buffalo, 1480 K.C., 11:45 A. M. daily except Saturday. — Buffalo wholesale market report, including dairy products, eggs, poultry, fruits and vegetables.

WBEN, Buffalo, 900 K.C., 1:00 P. M. daily—Report on Buffalo wholesale market, including dairy products, fruits and vegetables.

"We're ruined, Pa! I ain't been able to get anything but oil out of it all day."

MILK WANTED!

Increased Demand at Higher Prices Opens Up a Two-way Opportunity for Making Dairy Dollars in 1940

IF ANYONE had dared, a year ago, to predict the change that twelve months would bring in the dairy business, he would have been laughed to scorn. A year ago, we could see little but gloom. Today, the dairy outlook is decidedly bright and sunny.

Not only are milk prices back to money-making levels, but the increased demand promises to keep them up. American consumers have more money to spend. They spent more money this past Christmas season than in any Christmas season for several years. They are buying more milk and other dairy products today than they could afford a year ago. Last year's huge storage stocks of butter, cheese, and dried milk have already been reduced to less than normal.

Probably not since 1929 have dairy farmers had such an opportunity to make money. While they still have problems over base and surplus quantities, the average or composite price is decidedly on the right side of the profit line. The situation is one that warrants an immediate return to the principles of sound dairying that were allowed to lapse (in many barns) during the gloom days.

Feed PURINA COW CHOW

16% OR 20% FOR STRAIGHT FEEDING
24% OR 34% TO BALANCE YOUR GRAIN

One of these principles is GOOD FEEDING. Not feeding for a few months of high production at the expense of the cow's body—but feeding for the double purpose of getting high production and MAINTAINING the cow's body for CONTINUED high production through her whole milking period. And that's where Purina Cow Chow has proved its worth, over "lesser" feeds, year after year after year.

Whether you want a supplementary feed to balance your grain, or a complete feed to go straight from the bag to the manger, there's a Cow Chow to fit your needs (see below). Every one of them is a better feed today than it was in the "good old days of '29" that show promise of returning. Let Cow Chow help YOU to cash in on TODAY'S money-making opportunity.

PURINA MILLS
Buffalo, N. Y. St. Louis, Mo.

SALUTE THYSELF!

*"By all means use some times to be alone.
Salute thyself: see what thy soul doth
wear . . ."*

—GEORGE HERBERT

AT THE beginning of each year I set myself a goal, and for the year 1940 the above quotation has given me my dominant thought. Did you ever take time out to sit down with yourself alone to check over the path you have come and where you are going? I have tried to do it with myself this year, and it is a most interesting procedure.

After all, I know myself better than anyone else knows ME. I may be able to fool others, but I can't fool myself. So, at the beginning of a year I check myself through pretty thoroughly, recalling past failures and successes, and putting down in black and white just exactly how I made out in other goals I set in past years. As I review Myself I see possibilities in "Me" which have never been reached.

Looking Myself squarely in the eye, I ask a few pointed questions. How about the year just past, and the year before that, and even the year before that? Before I go forward into the year ahead, it is pretty important that I correct weaknesses and consolidate victories in the last campaign.

In the years past, how many things have I started that I never did finish? This is no casual glance back, but an earnest effort to see what kind of a fellow I was in past years and how much I have grown up to the present.

FOR INSTANCE, back in the year 1937 my goal was to turn Liabilities into Assets. That year I promised myself to do this very thing. I promised to balance my personal ledger in a four-square way. First, I would "Stand Tall." Can I salute my today's posture? Have I lost ground or gained ground? And how about the next program, "Think Tall," and the next, "Smile Tall," and the next, "Live Tall"?

These are not just trite expressions. They have a deep significance for me and for you also. In our determination to develop a balanced life, what progress have we made since 1937? We may have done but little to change Liabilities into Assets back in 1937, but what are we going to do about it right now in 1940?

Four-Square living through the years has proven itself fundamentally right. It works. There is no guess to it. There's no standing still in this rapidly moving game of life.

How much stock do you take in Yourself? Would you honestly buy any stock in Yourself? How much confidence do you have in the future? Are you in the mediocre class that never takes inventories? Only as you turn Liabilities into Assets do you make gains.

I'm anxious for you to reap the benefit of today's tremendous opportunities. I want to Dare you more today than I have ever Dared you in my life. Daringly enter the days ahead in search of High Adventure. When we Stand Tall, Think Tall, Smile Tall, and Live Tall, we send Liabilities to the wind.

NINETEEN FORTY is marching on. Are you marching along with it? Are you doing anything about improving your health? — Stand Tall. Have you a study and reading program? — if so, you Think Tall. How about making an effort to add a few new friends? — then Smile Tall. But most of all, our religion and our character lift us to the greatest heights and cause us to Live Tall.

WM. H. DANFORTH
Chairman, Ralston Purina Company

LOOK for this SIGN when you need that spark plug cleaning service that saves 1 gallon of gas in 10

More than 70,000 garages, service stations, and dealers clean and regap spark plugs by the famous "AC Method." They give this service because all plugs need cleaning and adjusting every 4,000 miles. Today's fuels and modern driving habits cause plugs to get dirty quickly. Dirty plugs misfire intermittently, especially under load. Then gas is wasted, power is cut, and starting ease is lost. So, have your plugs cleaned every 4,000 miles "the AC way." It costs only 5c a plug.

There's a Registered AC Cleaning Station NEAR YOU

AC SPARK PLUG DIVISION • General Motors Corporation • FLINT, MICH.

Look for this Trade-Mark when you need those spark plugs that assure best engine performance

More cars and trucks are factory-equipped with AC Spark Plugs than with any other brand. This has been true for years. Of the cars built in the last ten years which are still in use, 55% were originally AC equipped. The spark plugs that satisfy the men who build cars and trucks are safe for you to buy, and sure to satisfy you, too. They are also easy to get, because automotive retailers of every kind, everywhere, stock and sell AC Quality Spark Plugs.

GET THE DIFFERENCE

Better Returns from Your FERTILIZER DOLLAR

EDITOR'S NOTE: The story on this page is a summary of a talk given by Dr. Richard Bradfield at the meeting of the vegetable and potato growers at Ithaca. Dr. Bradfield came recently from Ohio to Department of Agronomy at the College of Agriculture at Ithaca. As farmers of the state come to know him better, we predict that his advice and counsel will be widely sought.

5-10-5. In a very few cases less concentrated fertilizers may contain some minor elements that will help the growth of plants where they are needed, but this applies in only a few cases and usually these minor elements can be added in a more economical way.

How to Apply Fertilizer

Experiments have shown that best results are secured by applying the fertilizer as close to the seed as can be done without injury to it. The usual recommendation is to put the fertilizer in bands at each side of the seed, about 2" from it and slightly below it. The fertilizer manufacturer goes through rather extensive manufacturing processes to make the plant food in the fertilizer more available. When the fertilizer is mixed all through the top layer of the soil, it tends slowly to be changed back to its original, less available forms. Keeping the fertilizer close to the seed slows up this process, the plants are able to use a greater percentage of the fertilizer and you get more returns per dollar spent.

Soil is more than just a lifeless mixture of various chemical elements. It has been shown that a cubic inch of good soil will contain as many bacteria as the entire human population of the country. Soils contain many particles so small that they cannot be seen under the highest powered microscope. As nearly as we can figure, the combined surface of all of the particles in a cubic inch of ordinary soil is equal to about an acre.

Preventing Losses

One source of losses in fertilizers, particularly of nitrogen, is leaching. The principal way to retard this loss is to have plants growing on the soil during the entire growing season. It has been shown that there is almost no leaching of nitrogen at any time when grass or a cover crop is growing on the soil. There is little leaching loss of phosphorus or potash at any time.

Another way to get the most from your fertilizer dollar is to use the fertilizer analysis best suited to your soil and to the crop you grow. It would be very helpful if there were some quick and easy way of determining the best analysis to use under your particular conditions, but as yet it appears that field tests, while they may be slow, are the surest and best method of determining what fertilizer to use. Where fields need lime it is important to supply this lack in order to get the best results from commercial fertilizers.

Before the World War we imported most of our potash from Central Europe. Now this country provides three-quarters of the potash we need, and we have supplies which, if necessary, can meet all demands. At present, potash is still coming to this country from France. The cost of potash is now over 25 per cent below pre-war costs.

Fewer Analyses

In recent years farmers have been using more mixed fertilizer. Twenty-five years ago there was little or no effort toward standardization of analyses and the large number of fertilizer analyses offered to farmers was confusing and unnecessary. Now colleges of agriculture and manufacturers have agreed that eleven fertilizer ratios are all that we need, and there has been a definite trend toward fewer analyses offered for sale, thereby permitting a very definite saving in manufacture.

Along with the trend toward fewer analyses, a ton of fertilizer averages to contain more plant food than it once did. It is generally agreed that a fertilizer should contain not less than 20 per cent of plant food (for example a 5-10-5). Most mixed fertilizers now sold meet this requirement and many exceed it.

Freight charges on a ton of low analysis fertilizer are just as high as they are on concentrated fertilizer. Besides that, why not save our backs? If we can get the same plant food in one ton that we formerly bought in two, there is just so much less lifting to be done.

A 5-10-5 fertilizer and a 10-20-10 fertilizer have the same ratio of nitrogen, phosphorus and potash; but it is possible to save about 25 per cent in cost when the more concentrated fertilizer is manufactured and sold. Experiments have shown that in most cases equally good results are secured from 1,000 lbs. of 10-20-10 as from a ton of

"Let's Give Youth a Farm Opportunity"

Henry Ford

Henry Ford at the wheel of
the new Ford Tractor

YOUTH hears a great deal more about opportunity in the city than on the land.

For years Henry Ford has been finding ways to improve farm opportunities. He has found new uses in industry for farm products. He has pioneered a policy of back-to-the-land for industry as well as for youth.

Now he is ready with the means to accomplish still more. The Ford tractor with Ferguson system which Henry Ford introduces, provides a chance for men to get somewhere in farming.

For youth, in particular, it is opportunity.

A boy can easily master the new machinery, so light and simple are all the controls. He can start it, steer it, change from one implement to another. It takes one minute, for instance, to attach the row-crop cultivator.

With its four wheels it steers easier than an automobile in soft-plowed ground. Even a boy can operate it under many conditions where men and horses work only with the greatest difficulty.

Its adaptability in rock-filled fields, in fence corners, and narrow places, in soft sandy soil, is something that has to be seen to be fully believed.

There are steep hills where no tractor has ever been, but boys will plow and cultivate them without fear. The Ferguson principle gives the tractor a degree of safety never seen on the farm before.

This same principle of linkage and hydraulic control of implement keeps the plow working at an even depth in hard-baked ground, in tough sod, and across uneven fields.

A boy can set the depth control with two fingers, or raise and lower the implements just as easily.

It's a sight worth seeing to watch a farmer's boy cultivating two rows at a time and never minding the shovels. The rear-mounted cultivator is as flexible as your wrist, and works entirely without watching. Just sit and steer.

Farmers can get rid of their horses now, if they feel like it, and be free of the extra work of feeding and looking after them. The Ford tractor with Ferguson system is so adaptable it more than takes the place of animal power on practically all farms, both large and small.

Universal flexibility makes it a tractor for everyone to use. The unique principles of its design enable almost any farm boy

to do a man's share of what used to be the "heavy work." Boys are the ones who will take charge of the new system because they can master it so quickly, easily, and safely.

Plowing two 14-inch furrows across the field with a lightweight, effortless tractor controlled by fingertip touch is something that adds zest to farming. It means shorter hours. More time to attend to other things. A chance to get ahead. *And to the farm youth, that's opportunity.*

- The Ford tractor with Ferguson system is sold and distributed by the Ferguson-Sherman Manufacturing Corporation. Accept our invitation to see and operate the tractor. You must see it to appreciate it. Write for the name of your nearest dealer. Address: Department FY, Ferguson-Sherman Manufacturing Corporation, Dearborn, Michigan.

DIBBLE'S FARM SEEDS

**Alfalfa - Grass Seed - Corn - Soy Beans
Clover - Oats - Barley - Seed Potatoes**

Alfalfa, timothy and the clovers (except alsike) are plentiful this year. Prices generally are low. Thousands have been waiting for just such conditions—Dibble Quality at ordinary prices—to get started with Dibble Seeds. This will be a Dibble year! Dibble Seeds, as always, are ALL northern grown, hardy, acclimated, and of KNOWN origin!

Choice Seed Oats are in demand. Crop short. Dibble quality excellent! Same with Good Seed Potatoes. Prices should advance. Protect yourself with Dibble Potatoes at present low prices.

Take advantage of our knowledge of farm seeds, based on years of intensive testing and proving on our 1000 acre experimental farm. You can't lose with our "10-day-any-test-you-want" guarantee behind every bushel we sell.

DIBBLE'S HEAVYWEIGHT OATS—Most productive American Oat, 40-42 lbs. per bushel. Also Cornelian and Lenox Oats are excellent quality and value!

DIBBLE'S SEED CORN—All leading varieties 95% germination or better. Test it yourself.

One quality only—THE BEST. Prices less than you'd expect for such Quality. Get the DIBBLE catalog and Prices FREE. Send name and address on a 1c postcard. Edward F. Dibble Seedgrower Box C, Honeoye Falls, N.Y.

1940 CATALOGUE now ready

How to Get Hay from POOR SEEDINGS

OWNERS of farms in areas that were hit by dry weather last summer are faced with the problem of managing new seedings in a way that will provide the most hay. John Barron of the Agronomy Department at Cornell makes some suggestions that should prove helpful.

With new seedings the situation may not be as bad as it first appears. If the land was adequately limed and phosphated when seeded and if the field has a 30 to 40 per cent stand, a good application of farm manure may bring a good crop. In other cases, whether or not manure is added, but assuming failure was due to weather and not to lack of fertility or lime, it may be worth while to sow extra seed. Use your regular seeding mixture and sow from 1/2 to 3/4 the usual rate early enough so that freezing and thawing will cover up the seed.

When this is done, plan to cut the hay early in June. At that time it will consist of plants from last year's seeding and probably some weeds. If cut early, this will make good feed. Cutting early will allow the seed planted this spring to grow rapidly, and about the middle of August there will be another crop made up of second growth of plants seeded last year and the new growth of the seed put in this spring. The two cuttings together should result in a fair yield of hay.

SWEET CLOVER

Another possible procedure where lime and superphosphate have been added liberally is to sow biennial sweet clover. One way is to sow from 10 to 20 pounds per acre of non-scarified sweet clover any time up to March 20 so it will be covered by freezing and thawing; or if you prefer, you can sow after March 20, using scarified seed. Here again the hay should be cut not later than June 15, thus giving the sweet clover a chance to grow rapidly. About the middle of August the field can be cut again, at which time the growth will be largely sweet clover. Then a year from next summer you should get a good growth of sweet clover, which you can either pasture early in the season, cut as hay before the plants get too woody, or put into the silo. Another possibility is to plow the sweet clover under just before you plant your 1941 corn crop. Sweet clover is a biennial, and of course the field will have to be plowed at the end of the 1941 season.

NEW PASTURE MIXTURES

The seed mixtures for pastures for New York State have been modified. The old Cornell pasture mixture has not been changed, and is now called "Cornell Pasture Mixture No. 1." The hay-pasture mixture of last year is now listed as "Cornell General Purpose Mixture No. 2." A new mixture, called "Cornell Utility Mixture No. 3", is listed for the first time. It is better adapted for poorer soils than either of the other two. These mixtures can be purchased ready mixed from some seedsmen.

Five other seed mixtures for various situations are recommended, including one for poultry ranges. These mixtures are not available from seed houses, and anyone using them will have to buy the seed and mix them.

If you plan to sow a pasture mixture, get copies of the recommended seedings for 1940. By studying the recommendations, you will be able to pick out the mixture that will get the best results on your farm. A copy of the list of mixtures and recommendations can be secured from the Agronomy Department, College of Agriculture, Ithaca, N. Y.; or if you will drop us a card, we will see that you get one.

THIS IS THE TRACTOR TO BUY!

SILVER KING

— for 1940 gives you increased power . . economy . . easy handling . . speed . .

The new 1940 Silver King Tractor with its new and larger engine gives you all the power you need at the draw bar on any kind of work. Power that plows with ease through the rough spots and over the hills. Plowing speed from 2 to 5 miles per hour. Highway speed up to 25 miles per hour. For plowing, discing, harrowing, seeding, cultivating and harvesting, you'll find plenty of power in the Silver King to pull your farm tools at a surprisingly low cost and ease of operation.

Proved Dependability! Proved Low Upkeep! Silver King's the Tractor!

Thousands of Silver King owners in all parts of the country are pleased with Silver King performance and economy. You, too, will be thrilled with its many features. Streamlined for accessibility and easy attachment of tools, easy on gas and oil, automotive steering, low upkeep. The Silver King is a tractor for any farm, large or small. Southern Crops Freeze

Prices Trend Upward

WHILE first reports of any disaster are likely to be overstated, there is no doubt but that millions of dollars of damage has been done by unseasonably cold weather to early crops in southern states. Although Northeastern farmers are naturally sympathetic to their brothers in the South, they would hardly be human not to consider the possible effect on prices of farm products in this area.

Already the prices of onions and cabbage have jumped. Potato markets have shown some strengthening, although price increases have not been as rapid. Naturally, every farmer would like to sell at the peak, and in this regard we have one caution. In the past when a similar situation has occurred, an occasional farmer has held too long. Sometimes when the peak is reached and prices start to go down, they toboggan with extreme rapidity. Watch the market, but don't hold too long.

So far as early cabbage is concerned, practically all sections in Florida show severe damage, but we have heard no estimate as to the amount of damage. In Texas the guess has been made that the cabbage crop will be decreased 25 per cent. Shipments of cabbage from Texas during February will be reduced, but it is expected that a considerable amount of this crop will arrive from Texas during March. In Alabama the temperature in some areas dropped to 14 degrees, but a considerable acreage of cabbage will doubtless be replanted.

The Texas onion crop was damaged, and heavy losses are expected in some areas. However, because snow in other areas gave protection and because the temperature moderated slowly, the damage to Bermuda onions in the Laredo and Winter Garden sections has not been as serious as the low temperature might indicate. Early potatoes in the Hasting section of Florida were not yet up, and probably escaped damage; but around Miami the crop which would have been ready for harvest by the middle of February was entirely destroyed. Recent shipments of potatoes from Florida have been coming from the Everglades section, but more than half of that crop has already been marketed. Consequently, it seems certain that shipments of early potatoes from Florida will be considerably lighter than normal.

Considerable damage was also done to citrus fruits both in Florida and Texas, although the amount of the loss has not yet been carefully estimated. In Florida a temporary embargo has been placed on shipping citrus fruits to prevent the putting of frozen fruits on the market. There was no damage to the California citrus crop.

A good many early vegetables in the South were a total loss. The prices of fresh vegetables immediately turned upward, but in many cases there is practically no supply of fresh vegetables available.

In addition to increases already mentioned for onions and cabbage, there have been some advances in prices for carrots and some improvement in prices for apples.

The acreage of vegetable crops has increased rapidly during the past 12 years in the United States. Vegetables for manufacture increased from 992,210 acres in 1928 to 1,563,870 in 1937, and dropped to 1,105,280 in 1939. On the other hand, vegetables for market increased from 1,220,840 in 1928 to 1,746,360 in 1939. These figures cover 22 of the principal truck crops.

Your fields will be disked as you want them when you use a McCormick-Deering No. 9-A Disk Harrow. This is the 8-foot size.

Be Particular ABOUT SEEDBEDS-IT PAYS!

This 2-section McCormick-Deering Peg-Tooth Harrow is a light load for the fast-stepping Farmall-A.

Thorough penetration with a Model TD-40 Tractor and 18-foot McCormick-Deering Spring-Tooth Harrow.

There is a place in your tillage program for the practical McCormick-Deering Field Cultivator. Above: The 12-foot No. 8 with duckfoot shovels.

ARE YOU a man who takes pride in well-tilled fields? Then you know the satisfaction that comes from using McCormick-Deering Tillage Tools. You know that it pays to be particular about tillage machines, that it pays to be exacting about the kind of work they do.

The McCormick-Deering line for 1940 includes the most up-to-date disk harrows, peg and spring-tooth harrows, soil pulverizers, rotary hoes, field cultivators, rod weeders, land packers, harrow-plows, and tractor cultivators for every operation.

Get the jump on the calendar and the season—see the nearby International Harvester dealer now about tillage equipment for your spring work. He will be able to show you a great line of machines.

GROWTH for GRAIN

GRAIN really grows when you give it extra nitrogen. Try it on wheat this spring. As soon as you can get on your land, broadcast 100 pounds of Domestic SULPHATE OF AMMONIA per acre. You get immediate results. Growth is quick and vigorous, the plants stool out well, sending up many shoots

for **FRUIT** Domestic SULPHATE OF AMMONIA, applied to fruit trees, strengthens the bloom, betters the set and increases the yield.

for **GRASS** Domestic SULPHATE OF AMMONIA, at 200 pounds per acre, applied real early produces a luxuriant growth of high-quality feed.

to become seed-bearing stalks, which are loaded with extra bushels of good grain at harvest time.

When spring top-dressing with Domestic SULPHATE OF AMMONIA follows a good fall fertilizer such as 2-12-6, 100 pounds of SULPHATE usually means five to seven extra bushels of wheat per acre. Try SULPHATE this spring and make sure you get Domestic SULPHATE OF AMMONIA, made in the U.S.A.

MY PARTNER— The Holstein Cow

By HARRY PETZOLD,
A Tioga County, N. Y., Dairyman.

I WAS born and raised on a farm in Chemung County, N. Y. Ever since I can remember I have had a love for good livestock and an appreciation of the opportunity to live in the country. Farming in itself has never offered great returns. My early ambitions and desires were not for the accumulation of wealth, but rather to attain a better farm home such as I admired as a boy. I had an equal longing to own quality livestock like those that were the pride of their owners. The farm is no place for the person who wishes to make a lot of money.

Like many starting out in business, I could not have a big herd. When I started out twenty-eight years ago, I started with grade animals and gradually worked into purebreds.

One of the first problems of a dairyman, in addition to maintaining the registration of his purebred animals in the herd books of the Breed Association, is continually to improve them for superior dairy quality in type and production. I was first faced with the problem of a herd sire. From the very beginning I have used purebred sires registered in the Breed Association. If I expected the daughters of my foundation cows to be better than their dams, I must select a sire whose dam produced more than any of the cows in my herd. This required the selection of a sire from cows of actual known production.

As in the development of any business, it is necessary to keep abreast of the times. During my farming career I have been faced with many farm problems. Some of these brought disastrous results and considerable expense to myself. Through these experiences I found that the State College of Agriculture had already solved many of these problems without expense to the farmers throughout the country. By taking advantage of the college experiments, especially through our local Farm Bureau, I have secured a great deal of information whereby I have avoided many expensive mistakes. A farmer cannot afford to experiment too much.

As my dairy developed from grades to purebreds, there also developed a strong pride of ownership. I first showed animals at the Owego Fair eighteen years ago. As a result of such showing, one sets a standard of merit that cannot be visualized by keeping the animals at home. Through these experiences of measuring our success in actual competition with other breeders, the herd developed until the animals seemed to be of sufficient merit to take to the State Fair. This State Fair showing was started in a modest way by exhibiting one or two animals. At the present time the herd has been fairly successful in competition, not only at the State Fair at Syracuse, but in a rather extensive circuit over New York State, Pennsylvania and Ohio.

Along with the pride in developing and owning animals that are a credit to the community, your Breed Association, and the state, there is that pride of developing a home and seeing your boys and girls take their places in competition with men and women in other lines of business. Eleven or twelve years ago my boys started showing 4-H heifers at the State Fair. This created a splendid and healthy interest on their part in developing good type livestock. It gave them an ideal that has already worked to their advantage in starting herds of their own.

It has been my experience that animals of best type have usually been the best producers. This means that there

is a definite relationship between type and production.

Similar interest developed from recording animals, in competition with the rest of the world, through production records. Two years previous to starting the showing of cattle, I started the testing of animals for production through supervision of the State College of Agriculture and under the direction of the National Holstein-Friesian Association. This testing for production, like the showing of cattle, gives one a sense of competition and a pride of accomplishment that makes the breeding of Holstein cattle a most thrilling game. It has aided very materially in the development of the kind of cattle for which other people were willing to pay better prices. It is these prices that contribute to the development of a satisfactory home life.

In order to carry on any farm undertaking most people, like myself, have had their problems of financing farm operations. This financing is of utmost importance. It has been my experience that a definite program of agriculture as previously mentioned, a goal in mind, ambition to succeed and superior cattle have been material aids in any financing operation that I have undertaken. Farmers should make use of their local banks and their Production Credit Association. Any well-managed farm business on a good sound basis will be able to get the necessary funds.

My experiences in the past, as well as the present, lead me to believe that there are still plenty of opportunities to make a good living in agriculture. We now have farm conveniences equal

Dr. Naylor's MEDICATED Teat Dilators

Safe and dependable treatment for Spider Teat, Scab Teats, Cut and Bruised Teats, Obstructions.

Dr. Naylor Dilators are sterilized, medicated and saturated with the antiseptic ointment in which they are packed. They have a deep yielding surface of soft absorbent texture which fits either large or small teats without overstretching or tearing and which carries the medication INTO teat canal to seat of trouble.

The Only Soft Surface Dilators

Easy to Insert—Stay in the Teat

Whether infection at end of teat, cut or bruised, the resulting condition which closes teat canal making it hard to milk is always the same—INFLAMMATION.

To relieve inflammation in a wound or bruise the treatment most universally used by the veterinary and medical profession is—to apply antiseptics, healing agents and a sterilized, soft absorbent dressing.

Dr. Naylor's Medicated Teat Dilators apply this same treatment for removing inflammation from the milk canal of cows' teats. They carry antiseptics and healing agents into teat canal to combat infection and promote healing.

The dilators themselves are sterilized, soft, absorbent dressings which protect the inflamed area, absorb inflammatory exudates and keep teat canal open in its natural shape while tissues heal.

Sterilized, Medicated—Packed in Antiseptic Ointment
Large Pkg. (48 Dilators) \$1.00
Trial Pkg. (18 Dilators) .50

Sturdy Forebears

By Will B. Thompson.

Here lie the tilled lands of my heritage.
Sun and rain, snow and scorching summer heat

Mellow the loam and write on history's page

The saga of proud sires whose names I meet

In everything that tells long-proved worth . . .

That cairn of stones upon the windward hill?

Old Seth, my grandad, built it after dearth

Of rain was past. My new plow reaches still

The grove of alders, glistening, full of life,

My father loved and never would cut down;

Each stone, deep bedded, whispers beauty rife;

Each leaf sings June; and yonder road to town,

Valley and rock-ribbed slope where dogwoods grow,

Seem dearer still for graves . . . beneath the snow.

to those of any city residence such as electricity, good roads, automobiles, radios, telephones.

There is as much opportunity for our farm youth today as there was thirty or fifty years ago. There are still problems to solve and the need for good farm leadership. A young man who likes farming has a big opportunity to be of service to agriculture. He has the same satisfaction and pride of ownership in the developing of animals of merit. He has the same opportunity to build his home and see his fields improve in their productive ability. Agriculture is looking for such leaders.

Ladino Plantings to Increase—Plantings of Ladino clover in Massachusetts in 1940 will be more than 4,000 acres, is estimate of Ralph W. Donaldson state college agronomist. This will be a 60 per cent increase over 1939 acreage and will be more than double the plantings of two years ago.

Ladino thrives best on moist low-land areas—those normally too wet for best corn or alfalfa, yet sufficiently drained to prevent standing water or undue puncturing by animal feet. According to Mr. Donaldson, sufficient moisture in the topsoil during mid-season periods is especially needed due to its shallowroot and surface feeding runners, the same as for native pasture strains. It seldom thrives on the drier soils. Moreover to produce heavily, it must be fed liberally and with moderate liming of acid soils, the same as for red clover.—Walter E. Piper.

MILKING SENSATION

IT'S THE NEW DE LAVAL MAGNETIC SPEEDWAY MILKER

Tomorrow's Milker Today

THE new De Laval Magnetic Speedway Milker is here now. It's new, yet based upon tried and proven De Laval principles of milking—it's far out ahead, unequalled by any other method of milking—it's the world's best and fastest milker.

New, exclusive features enable the time-tested De Laval principles of milking to be applied still more effectively—magnetic pulsation control, uniform, rhythmic, vigorous milking action . . . new tough, long-lasting Delatex rubber parts . . . new Stainless Steel Comfort Teat-Cups with easy-to-clean, Sani-Cap combination teat-cup bottoms and milk tubes . . . new Fast-Flow, streamlined, one-moving-part pulsator which never requires oiling . . . new polished, silver, one-piece, durable, sanitary Stainless Steel Pail . . . new improved operating top with removable sight glass . . . these are just a few of the many exclusive features of this wonderful new milker.

Whether you now milk by hand or by machine you have a real surprise in store for you

when you first see the streamlined black and silver, easy-to-care-for beauty of the new De Laval Magnetic Speedway Milker . . . when you first see its unequalled fast, clean milking . . . listen to its uniform, rhythmic action . . . notice how the cows respond to it . . . observe its convenience and ease of handling. And you must see and try it to really appreciate it.

Your local De Laval Dealer will gladly show and demonstrate the new De Laval Magnetic Speedway Milker without cost or obligation. Get in touch with him today—or send coupon to the nearest office listed below for complete information.

To You Young Men and Women *who will tend* *the farms of* **THE GREAT TOMORROW**

We Will Pass on to You a Duty and a Heritage . . . Guard it Well, for it means Your Livelihood!

SOON—very soon—the furrows ploughed by the farm leaders of today will bend over the hill and be lost in the shadows of Yesterday. You young men and women of today—members of 4-H Clubs and other juvenile organizations—must take over the guardianship of the land and its future.

You must market that greatest of all money crops—the milk produced on the farms of the New York Milk Shed. And you must carry the burdens and solve the perplexing problems that have made your fathers old before their time—the burdens and problems of the age-old fight for a **LIVING PRICE FOR MILK**.

And now since that job is just ahead of you, it is the time to study the problem and plan toward its solution. Now is the time to learn the truth about the milk problem . . . the time to separate the wheat from the chaff . . . and to carry on the battle that your fathers waged before you. Now is the time to gird yourselves for a successful outcome that will insure a higher standard of living for you and for all farmers' sons and daughters in this state.

Now, also, is the time for we older farmers, who have waged this battle for the past 25 years, to realize that our

only chance for continued success lies in the hands of the young people in our homes. It is up to us—while we are yet able—to see that they are blessed with the home advantages which only **A LIVING PRICE FOR MILK** can secure for them. It is up to us to see that none of our gains are taken, or wheedled, away from us. It is the job for the older and wiser heads among us to see that the cunning schemes of the chiseling dealers are never permitted to divide our ranks and thus weaken the structure which we have so patiently built up.

The Dairymen's League, which has long battled for the **LEGAL** rights of farmers . . . which has struggled unceasingly to secure **A LIVING PRICE FOR MILK** . . . has always recognized in these benefits the way to higher living standards on the farm. The way to greater opportunity and happier lives for our children and grandchildren. We will fight to the last to defend and maintain all that we have won for them—and for all farmers' children. And we ask in return merely that they carry on the banner when it drops from our hands—the banner that is inscribed with our war-cry, "**A LIVING PRICE FOR MILK**."

Published by the
THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

NORTHEASTERN *Slants* ON THE *National* NEWS

■ Farm Bill Feels the Axe

NO EXCEPTION to Congress' new economy rule is farm relief bill. As passed by House of Representatives, it calls for expenditures of \$722,000,000 (not counting permanent automatic appropriations). This was cut of \$67,000,000 below President Roosevelt's budget. Cut included a \$25,000,000 proposal for loans to tenant farmers. Bill is now before Senate, where farm cuts may be restored.

SLANT: Those behind scenes in Washington say that economy move is mostly a play to the grandstand, that eventually many cuts in appropriations will be restored, and that most that can be hoped for is that Congress won't go beyond President's original budget. However, Congressmen do seem to be at last waking up to rising indignation of public against reckless government spending.

■ Fewer Foreclosures

FORECLOSURES on Federal Land Bank and Land Bank Commissioner Loans, according to Governor A. G. Black of the Farm Credit Administration, dropped more than 50 per cent during last quarter of 1939.

"Since 1933," said Governor Black, "number of Federal Land Bank foreclosures has been consistently smaller in proportion than for any other leading classes of creditors."

Signed by President Roosevelt is law authorizing Land Bank Commissioner loans until June 1, 1942. These loans supplement those made by Federal Land Banks, and enable farmers to purchase farms and re-finance farm debts.

According to Governor Black, there are now 440,000 American farmers with Land Bank Commissioner Loans amounting to more than \$690,000,000.

■ A Tax That Teaches

UNITED STATES Supreme Court says New York City has right to impose sales tax on merchandise from sources outside the city.

For going on eight years, New York City consumers have paid sales tax of 2c on every dollar of price of all commodities bought, except food. There are sales taxes in 23 states, and two cities—New York and New Orleans.

SLANT: There should be no new taxes of any kind, but if any is added, a sales tax is the best answer. It is right out in the open where everybody knows what it is, is paid by everybody, and it makes you mad every time you pay it. Hence, it teaches non-thinking citizens what taxes really mean.

■ Not Agreed On Trade Pacts

TESTIFYING recently before House ways and means committee in Washington, National Grange Master Louis J. Taber said that reciprocal trade program has hurt agriculture, and warned that if trade agreements act is renewed on June 12 (date it

expires), it will necessitate another billion dollars for farm relief.

"After experimenting with trade pacts for six years," Mr. Taber declared, "American farm prices are 22 per cent below parity and imports of agricultural products have hurt American farmers."

President Ed O'Neal of American Farm Bureau Federation, on other hand, told committee that trade program has benefitted farmers by encouraging exports of farm products. He also said that it has put more money in pockets of consumers, thus increasing demand for farm products here at home.

Dairymen and livestock growers are lined up with National Grange as opposed to trade pacts. For pacts are growers of apples and pears, exports of which fruits were greatly increased by the program. In a letter to house ways and means committee, Secretary R. G. Phillips, of International Apple Growers Association, reported that sales to Great Britain had increased 25 per cent. Since war broke out, however, apple sales to Britain have dropped, and sales of guns taken their place. Keeping "the doctor away" is now less important for British than keeping the Germans away.

■ "Condemned to Death"

LAST FORTNIGHT in Europe was marked by continued success of Finland's fighting forces against Russian troops, and by more Finnish appeals for desperately needed outside aid in way of guns and airplanes. "If we do not get help," said one Finn, "we are condemned to death." Crisis in Finnish-Russian war is expected to come after the severe cold and Spring thaw are over—two factors which aid the Finns.

Swedish volunteers have been swelling Finland's army, and as we go to press there are reports that 4000 Danish volunteers are on their way to help. Also, 50 carloads of Italian-made warplanes are being shipped to Finland by way of France. Training in France is a Polish army, and several hundred Polish fliers are said to be offering their services to Finland.

Though sympathy for heroic little Finland is strong in this country, it doesn't look as though it will get the kind of help it needs from us. Money may be made available through Export-Import Bank which would let Finland buy surplus farm products from us, such as wheat, but no guns—and guns and planes are what they want.

■ You Can't Change the Weather

"EVERYONE talks about the weather," said Mark Twain, "but no one has yet succeeded in doing anything about it."

If men could change the weather, there would certainly have been changes this winter, worst in many a long year. Reaching deep into our own South, even into Florida, hard freeze destroyed thousands of dollars worth of fruits and vegetables. All over the land, transportation was delayed, and many deaths and injuries resulted directly or indirectly from cold and snow. One visitor to Baton Rouge, Louisiana, reported temperatures below zero,

frozen water pipes, householders having to go blocks for a pail of water, and firewood and blankets at a premium.

In Europe, cold weather was your friend or enemy, according to side you were on. It has been helping the Finns, used to sub-zero temperatures, to pile up victories against Russians. In Germany, frozen rivers tied up coal and other shipments. In England, temperatures were so low that they were not even reported by the press.

It is reliably reported that the groundhog did not see his shadow on Feb. 2, Candlemas Day. Therefore, according to old belief, Spring will be here within six weeks. It will be welcome!

■ Farm Shorts

ANOTHER UNION LABOR THREAT

"Get union drivers for your trucks within next 24 hours or stay home," was recent ultimatum delivered to farmers in New Sharon, N. J. In that town, 200 farm trucks, owned and operated by swinemen and their families, are used to collect garbage in nearby cities. With pork at its present price, these farmers couldn't see their way clear to hire union labor, let alone pay a \$25 initiation fee and union dues of \$3 a month. So they got busy, called a meeting of their local livestock association, and with the help of the Farm Bureau and Grange organized a committee to see New Jersey's Governor Moore. Result was the labor union organizers are laying off for the present.

SLANT: Only constant vigilance of farmers and combined forces of all farm organizations can defeat these repeated vicious attempts of labor unions to force their yoke on agriculture.

FARM PRICES UP

Department of Agriculture reports that local market prices for most farm products averaged higher in mid-January than in December, with index of prices received by farmers up to 99 per cent of 1910-1914 average.

WOODLOT OWNERS COOPERATE

Organized one year ago was Tioga Woodland Owners' Cooperative for purpose of getting a better return for their timber. Co-op now has 60 members, who pay 50 cents per 1000 feet for scaling and bookkeeping charges. Marking of trees for market is done by a trained tree marker, who uses a paint gun instead of an axe, and whose pay is 50c per 1,000 board feet. In Co-op's first year, members got \$1,143 for logs sold.

What these Tioga County, (N. Y.) farmers are doing can be done anywhere in Northeast, says Prof. J. A. Cope of Cornell, extension forester for the State, provided that these two essentials are present in a locality: (1) a progressive owner of a wood-using industry; and (2) a permanent supply of merchantable timber. Woodlot management, points out Prof. Cope, doubles growth rate from that of average unmanaged woods, makes for better and better trees, and more than doubles annual return from woodlands over the years.

HOW DRY WE ARE

Still with us is severest and longest drought in American history. During fall months, only five states had normal rainfall, and from New England to West Coast come reports of crop injury and dry wells. So serious is continued drought that it threatens fall sown grains. Wheat outlook is reported worst in history. December condition of winter wheat crop stood at 58 per cent of normal, lowest ever. (Previous lowest figure was 68.9 per cent of normal.)

WHAT ABOUT THE DIESEL D2 FOR THE DAIRY FARMER

How much does the D2 save?

Owners report that the 3-4 plow, 5-speed "Caterpillar" Diesel D2 Tractor saves 60% to 80% on fuel expense alone—compared to spark-ignition tractor power. That's \$175.00 per year for the average owner!

What about pulling power?

Broad tracks and proper balance give the Diesel D2 positive traction to turn 80%, and more, of its heavy-duty engine power into drawbar pull. Slip-freeedom means a bonus of power to do more and better work on time.

Who has proved these Diesels?

Farmers and other power users by the tens of thousands! Many "Caterpillar" Diesels have saved their price on fuel expense alone, and are still going strong. Only "Caterpillar" can build 35 years of progressive experience into track-type tractors!

Bringing the Farm Census Up to Date

ENUMERATORS for the United States Census Bureau will visit every one of the 7 million farms in America during April. On this 100th anniversary of the Census of Agriculture, they will present a new set of questions to American farmers, designed to produce information of maximum usefulness.

To do this, a new system of regionalizing the questionnaires has been adopted. This method will make it possible to obtain facts on production of all crops which are important at present, or which give promise of being important in the future.

The country has been divided into nine regions and the States included in this region are Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Vermont, West Virginia, and Wisconsin.

The Farm and Ranch schedules have been planned not only to take stock of acreage and harvest; they are aimed at finding answers to some of the troublesome economic problems which face farmers.

A Real Job

Next comes the tremendous task of securing answers to the schedule from every farmer in the United States, ranging from those who produce eggs and garden truck to the value of \$250 or more in suburban places, to the vast ranches with thousands of acres of public and private range. Collection of the reports of several millions of farms, beginning in April 1940, will fall to the lot of 50,000 to 60,000 enumerators, who will at the same time take a count of the people in the farm areas.

As rapidly as the figures for counties, and later for States, are tabulated, the results will be made public, for statistics are like hens' eggs, best when fresh. Compiling and publishing the complete results of the Agriculture Census will take 1400 clerks nearly 3 years' time in the Washington office of the Census Bureau.

The greeting of the census taker when he comes around is quite likely to be "I am the Census Enumerator. Will you please give me your name?", for that is Number 1 on the schedule. After that question is answered the farmer need not hesitate to give him what seems to be rather personal information, in addition to that concerning actual farming operations. The individual schedule is given a code number as soon as it reaches the Census Bureau and thereafter travels through the office routine as number so-and-so.

Will Show Changes

Every farmer will be asked age, color, and ownership or tenancy. Perhaps the farmer may wonder what use will be made of these facts by the world at large. Figures relating to age groups on the farm were first published in the Census of 1910, and in 1930 over half of the farm operators

A little time spent reviewing the questions to be asked by census enumerators will aid you in answering these questions quickly and accurately. You can get copies of the questions by dropping a post card to the Census Bureau, Department of Commerce, Washington, D. C.; or if you prefer, drop a card to American Agriculturist, P. O. Box 367, Ithaca, New York, and we will see that a copy is sent to you.

were found to be over 45 years of age. This item of age, combined with color and tenure, has a bearing upon changing farm conditions—for one thing, it may show whether the younger element is taking over as owner or tenant. It also shows the rise or fall of owner-

operated farms. In 1935, slightly over 57 per cent of the farms were run by owners.

The tenure classifications include full owner, part owner, manager, cash tenant, share-cash tenant, cropper, share tenant, and other tenant. Of the eight

tenures listed on the schedule, some, such as croppers, are common only in the South.

In 1940, of the total acres in each farm, six land use classifications will be applied to all farms. Thus will be shown acres devoted to crops, whether

harvested or a failure; pasture land; land lying idle or fallow; woodland; and all other land in the way of farmyards, feed lots, and waste land. Without a knowledge of land uses, especially that available for crops, it would be difficult to determine the potential crop resources of the country. In 1890 the farm land was classified only as improved and unimproved.

New Crops

The Bureau must be on the alert to take notice of any new grain, cereal, or forage plant which is coming into quantity production. Crop changes

sometimes come about almost unnoticed, but they have a very definite effect on the planting program and even on the type of farming in many sections. Thus, numerous crops appear on the 1940 schedule that were total strangers to the farm a decade or two ago.

In the early days, clover and timothy were the old standbys for hay, but today they have keen competition from alfalfa and lespedeza. The use of forage crops for hay and silage for stock feed has grown apace in recent years.

In the first Census of Agriculture, taken one hundred years ago, the yield

was given only for the big six of "cereal grain" crops—Indian corn, wheat, barley, oats, rye, and buckwheat. Since that time, not only have the methods of farming changed materially, but new crops better adapted to local conditions have become firmly established. Some of the new crops have foreign names indicating the country of their origin.

More Fruits and Vegetables

Adequate space on the schedule is given to fruits, nuts, and vegetables, which are taking on the importance of major crops. Since the American

family has come to expect year-round supplies of the leading vegetables, growing supplies for the canneries runs into big money. Nearly a score of vegetables are separately listed with space for acreage and value, and as many more are suggested to be reported when found by the enumerator.

In addition to a report on production, the inquiry on orchard fruits provides for the enumeration of "trees of bearing age" and "trees not of bearing age" to better determine the districts in which future production will show the greatest increase. Besides the usual small fruits or berries, the enumerators will report loganberries, boysenberries, and youngberries and will show separately wild and tame blueberries and red and black raspberries, in the appropriate regions.

Under the heading of "Livestock and livestock products," on the schedule, appear horses, cattle, hogs, sheep, goats and poultry. For the first time there will be an inquiry relating to fur farms, asking the number of silver fox and mink females on hand and the number of pelts taken in 1939. In view of the growing importance of herds of goats kept for dairy purposes, the enumerator will report on the number of goats milked.

Other inquiries to be made concern mortgage debt, taxes, and amount of farm income. Items on the schedule which reflect living conditions on the farm include days of labor performed for pay elsewhere than on the operator's farm; the number of days' work at non-farm jobs; cash expenditure for feed, for purchasing farm implements, automobiles, motor trucks, building materials and equipment, fertilizer, gasoline, and so forth; sales during 1939 of crops, livestock, and livestock products; number of cows milked during the year; amount of wool clipped during the year; production of butter and eggs; and the type of public road on which the farm is located.

Farm Accounts Help

As more and more farmers turn to a simple system of bookkeeping to keep track of their business, it becomes easier for them to supply accurate figures for the farm census. In any case, the enumerator is an understanding fellow citizen ready and anxious to help, so that he can obtain answers and get on to the next farm. He is paid on the basis of the number of schedules he fills out. He will appreciate a friendly greeting and the cooperation of all the farmers, and above all, prompt and accurate replies to his questions.

In addition to agriculture, the Sixteenth Decennial Census in 1940 will cover population, employment, occupations, income, education, housing, business, manufactures, natural resources, and irrigation and drainage.

Plan a Farm Shop

It is hard to make worthwhile repairs on farm equipment without a room which can be heated and lighted so as to work in bad weather and in which the proper tools and supplies can be stored for handy use. If you do not have such a shop, plan on arranging it at once so as to get the equipment in shape before spring work opens. Good bulletins on the farm shop and on the construction and repair of farm equipment can be secured from the United States Department of Agriculture and from the different agricultural experiment stations, and many manufacturers of farm equipment and tools have helpful literature. There are also many texts which will be invaluable for the farm repair man. Write to your agricultural college or to us for bulletins and suggestions on farm shops and on special problems in machinery repairs.

HOW OLD WILL YOUR 1940 TRACTOR BE IN 3 YEARS?

1941
1942
1943

THIS MONDAY NIGHT... Tune in "Tune-Up Time," featuring Andre Kostelanetz and Tony Martin. Columbia Broadcasting System, 8 P.M., E.S.T.; 7 P.M., C.S.T.—10 P.M., M.S.T.; 9 P.M., P.S.T.

HERE ARE THE NEW FEATURES AVAILABLE ON AN UP-TO-DATE MODERN TRACTOR

1. HIGH COMPRESSION ENGINE, which develops extra power to pull more implements, and to travel in higher gear. Designed to use good-grade gasoline, high compression engines are sparing of oil, and start easily.

2. RUBBER TIRES give greater comfort and greater speed—make the tractor a year-round machine for more and better jobs.

3. SELF-STARTER, with all it means in greater safety; starting as convenient and quick as with your automobile. And there's a big saving in fuel.

4. COMFORT AND CONVENIENCE... comfortable seat, conveniently located controls, easy accessibility for servicing, simplified and faster arrangements for mounting tools.

1935

1940

THE SWING IS TO HIGH COMPRESSION. Only a few years ago high compression tractors made their first commercial appearance. Today 29 out of 35 models offered by the ten leading manufacturers of farm tractors are of the high compression type.

By J. F. (DOC.) ROBERTS

LIVESTOCK:—Should it be increas-
 ed or decreased on Northeastern farms
 this next year, probably a war year,
 with its usual commodity price rise?

Cash crops will almost surely be in-
 creased, and prospectively, the price
 structure will justify some increase,
 but already the ratio between farm
 livestock and farm production is way
 off balance, particularly in our sections.
 Therefore, this increase will only in-
 tensify an already bad situation. If it
 does it at a profit, you will say, "Why
 worry?" The worry is that we have
 just been through ten mighty tough
 years, all because we got out of ad-
 justment.

Livestock farming generally suffer-
 ed less losses and came back quicker
 than any other type of farming. In
 fact, we have had some very profitable
 years in this last decade. There never
 can be anything safer than making lit-
 tle, young, thin, animals, into large,
 mature, fat animals, and nothing can
 hurt you less when a war situation is
 over than a barn full of rough feed and
 a pasture full of livestock.

Figures show prospective increases
 in livestock of practically every class
 except sheep, but these figures are
 easy to get, as compared with increases
 in cash crop acreages for the next few
 years, labor costs, power costs, etc. Am
 wondering if that is not the reason we
 hear more about "livestock figures and
 cycles" than we do any other farm
 figures including prospective weather.
 Think twice before plowing too long
 and deep at the cost of livestock pas-
 ture and forage crops. Don't repeat the
 aftermath of war.

* * *

On livestock tours in a number of
 states in the past month, the outstand-
 ing feature has been its adaptability to
 the conditions under which it was being
 fed. Here in New York State, dry
 weather everywhere, or the severest
 of droughts in some sections, made
 rough feeds scarce and high, but with
 comparatively low-costing grains, mo-
 lasses and straw, hay ensilage, corn
 cob meal, corn silage, corn fodder, and
 even bean pods, livestock of all classes
 is getting a satisfactory ration and is
 doing as well, or better than most
 years. In the Mid-West, with worlds of
 corn, they are grinding hay and straw,
 are using flax chaff and other salvage
 lighteners in their rations, and are pro-
 ducing just as good gains and their
 livestock is also doing wonderfully well.
 You cannot do these things with cash
 crops.

* * *

After all, livestock is generally sold,
 not only on its fat and finish, but by

its general appearance. In other words,
 the human equation enters in, and the
 eye of the buyer is a very important
 factor. A lamb which has its tail dock-
 ed short appears to be much thicker
 in the hind quarters, is always cleaner,
 and if it is docked when it is ten to
 fifteen days old (which is the proper
 time), the weight of that tail is prac-
 tically nothing. Then why should we
 ask the lamb to support a big, long,
 tail, which has no value to anyone, and
 is a disadvantage to the lamb, when it
 could, with the same amount of feed,
 be producing that much fat or meat,
 where it will do some good, and where
 it will have value?

Advertisers

Write Advertisers for Their Helpful Literature.

ELECTRICITY FOR PLANTS

No hired man is so versatile as electricity. It will sterilize soil, furnish power for irrigation, heat the greenhouse, and by illuminating the greenhouse, will increase the rate of plant growth. The GENERAL ELECTRIC COMPANY of Schenectady, N. Y., has assembled pictured information in a booklet called "Electricity and Plant Growth." If you would like a copy, drop them a post card.

USE MORE MILK

When folks talk about increased milk consumption it is the city family they usually have in mind. Milk is just as necessary in the farm diet, and there are always new ways in which it can be used. A postcard to the Bureau of Milk Publicity, Department JJ-1, at Albany, New York, will bring you a booklet on "Milk, the Way to Health and Beauty."

POULTRYMEN

Of course you will be wanting to put in your orders for baby chicks soon. Advertisers in the baby chick columns of *American Agriculturist* are always glad to send catalogs and answer questions.

PLENTY OF POTASH

Farmers need have no fear about the supply of potash for commercial fertilizer during the current season. This word comes from the American Potash Institute, Washington, D. C. Since the last World War available deposits of potash have been located in several Western states. Some of these deposits have already been developed into producing potash. These deposits are capable of further expansion to a point where it is believed they can take care of all American needs.

ELECTRIC POWER

With the recent dedication of the Washington Electric Cooperative, with headquarters at East Montpelier, Vermont, Governor Aiken officially started the CATERPILLAR deisel power electric generator set. The Washington Electric Cooperative is a farmers' cooperative, organized to provide electric services to its members at cost.

FARM MORTGAGE LOANS

The FEDERAL LAND BANK for this district has made remarkable progress in recent years. Mail frequently brings requests for information about mortgage loans, questions which are best answered in a folder called "Farm Mortgage Loans Through the Federal Land Bank." If you live in New York, New England or New Jersey, drop a post card to the Federal Land Bank, Springfield, Mass., for your copy.

STORES BOOST APPLES

Three leading chain store groups have accepted and agreed to a recommendation by a growers' organization that they purchase apples at not less than a minimum price basis which the growers have determined necessary to prevent loss.

The New York and New England Apple Institute pointed out to the large buyers that purchases less than cost would have a tendency to demoralize the market.

The buyers on their part agreed to a plan to purchase apples by grade and variety and pay not less than a minimum price which would be fair to both purchaser and seller. Parties to the agreement so far are *First National Stores*, *Atlantic & Pacific Tea Company* and *Economy Stores*.

MOTION PICTURES

The GENERAL ELECTRIC COMPANY, Schenectady, N. Y., has just issued a new catalog of motion pictures. These, some of which are silent and some with sound, are for the use of organized groups such as churches, busi-

ness groups and farm organizations. There is no charge for their use except for a small fee to cover shipping.

The catalog lists various points of distribution, those in the Northeast being: 1 River Road, Schenectady; 140 Federal St., Boston, Mass.; and 1405 Locust St., Philadelphia, Pa. If you have a movie projector, you will be interested in getting this catalog.

SOIL FACTS

Everyone who prepares the soil, fertilizes it and plants a crop, wants to get the best possible results from time and money spent. The AMERICAN AGRICULTURAL CHEMICAL COMPANY, Carteret, N. J., has a book called "Get the Most Out of Your Soil" which you will enjoy reading. It is well illustrated, the information has been carefully checked, and it is written for the man who grows the crop.

(Above): Leslie Hubbard of HUBBARD FARMS, Walpole, N. H., and Lancaster, Pa., and his prize-winning chicks at the recent Pennsylvania Farm Products Show. Mr. Hubbard won the Sweepstakes prize awarded for the highest average score for the best three entries in the Show. In addition to the gold medal for the Sweepstakes, Hubbard Farms won a silver medal for the highest scoring entry of New Hampshire chicks and a silver medal for the highest scoring entry of cross-bred chicks.

TREATING SEED

Almost before you know it, it will be planting time again. One of the jobs that our grandfathers didn't worry about was seed treatment, but in these days it is important and in some cases essential. The BAYER-SEMESAN COMPANY, Du Pont Building, Wilmington, Delaware, have just sent us a list of booklets they have on seed treatment. They are: Semesan, a Practical and Effective Disinfectant for Flower Seeds and Bulbs; Semesan, a Disinfectant for Vegetable Seeds; Making Your Grain Acreage Pay; Dipping Seed Potatoes for Better Yields and Profits; More Profit from Corn the Easy Way; and Seed Treating Chart.

Any or all of these will be sent to any subscriber who requests them.

FREE BULLETINS

5 booklets on care and troubles of baby chicks—Hall Brothers Hatchery, Box 59, Wallingford, Conn.

John H. Walton, R. 3, Palmyra, N. Y.

Baby Chick's FIRST WEEK

THE first week is a critical stage in the life of any baby chick. Pulling them through this period in a healthy, vigorous condition does not solve all the problems of chick raising, but at least after the first week is over a poultryman can feel that he is on the way toward producing a healthy flock of pullets.

The tendency to hatch chicks earlier in the season has increased the problem of chilling. A tight house is essential as no brooder stove can keep a brooder house warm if cracks allow wintry winds to gain entrance.

The first step is to get the chicks into the house without allowing them to be chilled. Picking them up at the station or post office and bringing them home in a closed, heated car, plus speed and caution in getting them into the brooder house should handle this angle. Incidentally, have the brooder stove going at least two days before the chicks arrive.

Drinking water for young chicks should be warm. This point is sometimes overlooked, but it is easy to realize that drinking water close to the freezing point will quickly chill anything as small as a baby chick.

The Chicks Will Tell You

The ideal in heating is to have it plenty warm around the hover, but to have the rest of the house cool enough so the chicks will not be overheated. Until the chicks learn the source of warmth, it is advisable to keep them close to the stove with a fence of wire or roofing. The usual requirement is to have the temperature at the edge of the heater and 1" from the floor at from 90° to 95° F. By the end of the first week the temperature can be lowered to from 80° to 85°, and thereafter the temperature is commonly reduced about 5° a week for five or six weeks or until the stove is no longer necessary. Once chicks are started, they will tell you far more about temperature than a thermometer. If they crowd to the stove, they are too cold; if they seek the corners of the room, they are too hot.

Some poultrymen favor the two-room idea of brooding chickens. One room, of course, contains the source of heat; while the adjoining room, at a considerably cooler temperature, allows the chicks to escape from the heat while at the same time they can get back to the warm place if they become chilly.

One of the most common errors in keeping chicks is to attempt to keep too many in a given place. Experience

Keeping Hens in Cages

A talk presented at a NEPPCO Poultry School

By A. TRIPPITELLI

BATTERIES have a very definite place in the poultry industry of today, but *only* when the plant is properly located. It must be situated within easy reach of the consuming public, not only to capitalize on the potential interest of the public, but to develop a year-round profitable market for broilers and fowl.

We cannot blame the system for failures we have often witnessed, which have turned a lot of people against batteries. These failures were not in vain. They have been a laboratory that has taught us what to do and what not to do. They have helped drive home to us the importance of clean, fresh air for growth and production, and changes in feeding that have applied to floor birds as well.

Sound But Specialized

Today the battery system is a sound proposition, but it is also a highly specialized branch of the poultry business and requires operators well adapted and well trained. We must remember that although we have a veritable egg factory, we are dealing with live flesh and blood put under a terrific handicap to accomplish a gigantic job. Birds in a cage 12" x 14" are deprived of muscular exercise, hence become soft and have less resistance to disease and succumb easier to mismanagement than their sisters on the floor.

Since birds in batteries are so helplessly dependent on the operator, it is easy to understand their immediate response to good or bad management. I have followed closely the management on battery plants where everything seemed perfect, the birds in pink of condition, yet production was poor. A change of personnel working under exactly the same management produced miracles in production within a few days.

Details Important

The same sensitivity of the birds towards the operator applies to other factors such as light, air and feed. The proper adjustments and diffusion and intensity of lights increased production 20% and over, and made good producers of birds that would have been culled out. The installation of forced draft ventilation on several plants increased production from 10% to 30%. Feed enters into the picture very prominently. Formulas were compounded overnight. On two of the largest and earliest plants where these formulas were used the droppings were so loose they dripped like water from one floor of the battery to the next. It is easy to imagine the condition of the battery and the birds after several months of this condition. Again the system was blamed. Other exponents believed that what was good as feed for floor birds was good for the battery. This was a little slower death. Symptoms varied from rickets and overfatness to emaciation due to fatty degeneration of the liver or often a typical nephritis (inflammation of kidneys). The birds without exercise can not burn up cracked corn and corn meal as the floor birds do. Vitamins and minerals had to be readjusted for battery birds.

Disease is ever the important bug-a-boo. Contrary to early opinion, birds in cages are susceptible to the most serious of the diseases and parasites, as are floor birds, with a new one already established. However, the odds are in favor of the cage birds, for prevention is much easier, but the cure more difficult. Laryngotracheitis is the most common disease. Vaccination for Laryngotracheitis must be done as the chicks are moved from the chick batteries at 4 to 5 weeks.

At an outbreak of this disease the vaccination must start at the first vulnerable point of the circle and on to the last layer.

Diagnose Troubles Early

Chicken pox is common but not as virulent and most cases show it in a diphtheretic form, the birds dying from suffocation. Thus sometimes it is mistaken for Laryngotracheitis. The important thing to bear in mind is that at the first sign of respiratory trouble several birds should either be shipped or taken alive to a poultry laboratory for definite diagnosis.

Intestinal disorders such as coccidiosis and worms are very common when birds are range reared and put in cages. To insure against these troubles each bird should receive a dose of Iodine Vermicide and must be watched closely in case a second dose is necessary. Birds reared in batteries are usually free of parasites although I have seen several cases of intestinal coccidiosis with these also.

Mites Are Troublesome

Red Mites are a serious plague and although not very common have been

the downfall of several plants. Their extermination is a serious problem as the mites will crawl to the innermost folds of the metal holding the wire partitions and no spray can reach them. Fumigation and soaking are about the only remedies. Range paralysis or neurolymphomatosis is very common but this, as in floor management, can be controlled by selecting stock known to be free of the disease or from strains that have had it and are at present relatively immune.

The one battery disease is known as "battery nephritis." This is more of a physical breakdown of the liver and kidneys due to lack of exercise. Some strains are more resistant than others showing only 2 or 3 per cent; others much higher.

Loss by prolapse of the oviduct is very rare due to the fact that birds cannot pick one another nor disturb one that is laying.

Overenthusiasm Fatal

The biggest handicap the battery system has had to overcome and one that has retarded its popularity considerably has been the first rush into batteries by individuals with no poultry background or poultrymen far removed from cities, with plenty of good cheap land who thought that batteries were a labor saving device solving all poultry troubles and doubling their capacity with the same amount

MATERIAL LISTS
AVAILABLE AT YOUR 4-SQUARE LUMBER DEALER

The 4-SQUARE
FARM BUILDING SERVICE
216 DESIGNS FOR ALL TYPES
OF FARM STRUCTURES

Farm homes and buildings for every type of livestock program — buildings for grain storage, milk houses, machinery sheds. Before you build or remodel, see the 4-Square Farm Building Service. You can build better and more economically with the free Blue Prints, Material Lists and Ready-to-use 4-Square lumber. Correctly designed farm structures, built with 4-Square lumber, have far longer life and can be economically remodeled to suit new needs.

Save MORE CHICKS

RAISE STURDY, HEALTHY BIRDS

This modern Brooder House is portable. You can move it to clean ground, protect your chicks from disease. It meets every requirement for chick health and working convenience. It is warm, dry, well ventilated and lighted. It is 10x12 — capacity 225 to 250 birds. Don't overcrowd. It pays to provide ample quarters. If you go into poultry on a large scale, there are Blue Prints and Material Lists for 9 other poultry buildings in the 4-Square Farm Building Service. There are also designs for Sun Porches, Summer Shelters and other poultry equipment. Save money by using these plans and 4-Square lumber, the improved trade-marked lumber that comes in accurate lengths, already squared on ends and edges. This modern lumber fits into these modern designs and reduces erection costs. It eliminates needless sawing, fitting and material waste. You get low-cost construction, and better, more durable buildings.

AMERICAN CHICKERIES, Dept. A, GRAMPIAN, PENNA.

Baby Chick's First Week

(Continued from Page 20)

has shown that each three chicks should have 1½ sq. ft. of floor space, and that 300 is a good number to keep under one hover. The vice of cannibalism is more likely to break out where they are crowded. It is more difficult to control disease, and crowding slows down the rate of growth.

The question of litter is important. Straw is not particularly satisfactory because it packs down easily and does not absorb moisture too well. One of the commercial litters offered on the market is better. A layer of litter 3" to 6" deep, stirred up every day in order to keep it dry and droppings well distributed, will help to control disease. If the litter gets damp, it needs to be removed and replaced. As long as the litter stays dry, there is little advantage in changing it.

Occasionally we hear a recommendation that chicks should be fed for the first few days on papers. It has been pointed out, however, that if any chicks should have white diarrhea, the use of paper to cover the litter offers one of the best possible methods of spreading the disease. White diarrhea, of course, is one of the worst diseases when chicks are young, although either chilling or overheating may produce symptoms very similar to those of white diarrhea. As the chicks get older, coccidiosis is one of the chief foes; but so long as the litter can be kept dry, there is little danger of spread of this trouble.

Fresh Air Without Drafts

In an effort to keep the chicks warm, there is danger of keeping the air in the brooder house too stuffy. Fresh air is just as necessary as warmth. The

Hall's Chicks

SHIRK'S POULTRY FARM AND HATCHERY, H. C. SHIRK, Prop. Box 51, McAlisterville, Pa.

Sagacious Orange County Hen

"She's no dumb cluck," says 3-year-old Louis Masterson of Howells, Orange County, N. Y., as he greets his pal, Kippy, at his family's kitchen door.

For more than a year, Kippy has come each morning to the door, there to peck at the wood and "sing" until admitted, when she retires to her own nest behind the kitchen stove and usually lays an egg.

Kippy is "house broken"; sometimes spends the night roosting on the back of Masterson's setter, Lady; eats from Louis' hand; and, so he asserts stoutly, talks to him in language he can understand.

OUR GUARANTEE. You need have no hesitation in sending money to AMERICAN AGRICULTURIST baby chick advertisers. If they fail to send the chicks to you, your money will be refunded. We require every advertiser to stand back of statements made in the advertisement. Obviously no one can guarantee that chicks will live. To take advantage of our guarantee it is necessary, when writing advertisers, to say, "I saw your advertisement in AMERICAN AGRICULTURIST."

REDBIRD FARM

WORLD'S LARGEST R. I. RED BREEDING FARM

From 48 Breeders 28 years ago, to 75,000 State Blood-Tested Breeders Today—All on Our Own Farm—Famed throughout North America for Fast Growth, Early Maturity, Big Brown Eggs, and Supreme Market Quality.

3-Lb. Broilers at 10 Weeks
Harold Swimline, East Pembroke, N. Y., reports that his Redbird Farm birds weighed 2 3/4 lbs. at 8 weeks. Others report a majority weighing 3 lbs. or better at 10 weeks.

Pullets in 50% Production of 24-oz. to Doz. Eggs at 6 Mos.
F. J. Eisenberg, Athol, N. Y., writes: "The pullets I bought from you last spring started laying at four months and nine days, and ran as high as 84% at seven months."

98% Livability Guaranteed First 4 Wks. On Special, Grade-A and Grade-B Chicks.

RHODE ISLAND REDS—Our original strain.
ROCK-RED CROSS—For tip-top BARRED Broilers.

Mohawk Valley Hatchery,
Box 1005, SCHENECTADY, N. Y.

sides of the brooder house should be tight for at least three feet above the floor to prevent drafts, but at no time should the house feel stuffy and close to the operator. Gases given off by heaters are especially damaging, and there is likely to be a considerable percentage of carbon monoxide gas which is heavier than air and which would spread over the floor.

When it comes to feeding, you will take some of the chance out of chicken raising by adopting a good commercial chick feed and by following the manufacturer's directions to the letter. We often hear of "beginner's luck", which is probably due to a lack of confidence which prompts close following of rules. Obviously you should not pick one feed and follow another manufacturer's directions.

There has been some change in the former recommendations to withhold feed from chicks until they are from 72 to 96 hours old. Common advice now is to feed them when they are 36 hours old which, if your chicks are purchased, usually means that they are ready to eat when you get them. A good many poultrymen recommend that the chicks be fed somewhat sparingly for the first three days, although chicks should not get so hungry that they will eat litter. After the third day feed can be kept in front of them all of the time, although here again some poultrymen feel that it is wise to let the chicks clean up the hoppers once a day, late in the afternoon.

We have said nothing about chick quality. That is another story; but assuming that chicks are husky and healthy at the start, close attention to essentials will result in raising a high percentage of them.

Keeping Hens in Cages

(Continued from Page 21)

of labor and building. This proved to be a sad mistake and when these operators realized this they had nothing but contempt for the system which in itself was not to blame.

One serious error in management has been the problem of replacements. We must look on the individual cage as a potential egg producer and when that cage is idle our overhead jumps. To avoid this the operator must have more pullets maturing every two weeks, or every month, than are absolutely necessary. This means that the battery operator will have a steady supply of fowls and broilers the year round and if he is situated out in the wide open spaces it becomes a problem to dispose of them profitably, whereas near a city or large town he can retail all these at the door and at the highest prices. Furthermore, since batteries can insure an even supply of eggs of uniform quality the year round the owner can get and hold, at a premium return, the best markets available.

There is a feeling among poultrymen in general that if batteries become popular they will flood the market and leave the little fellow out in the country high and dry. This is not true; in the future, batteries will bring about the ultimate specialization in the poultry business. They will bring the farm to the consumer. The public with an easy, economical and assured source of day old, scientifically produced eggs will once more enshrine the egg on the American breakfast table and the chicken will adorn the Sunday table.

17 BRANCHES READY TO SERVE

There's a Kerr Chickeries office near you ready to give prompt, courteous service. Become acquainted with your local Kerr manager. He'll be glad to talk over your poultry problems.

Kerr breeders year after year make enviable records in egg-laying contests. Blood lines are carefully developed on the large Kerr breeding farm in Frenchtown. Established 32 years.

S. J. Lowell, Former Grange Leader, Passes Away

GRANGERS throughout the nation are saddened by the news of the death of Sherman J. Lowell, National Grange Master from 1919 to 1923. Mr. Lowell passed away at his home in Lambertton, near Fredonia, in Chautauqua County, New York, on February 3. He was 81 years of age. Mr. Lowell

was born in Lambertton May 28, 1858, the son of James Willoughby and Jane Shelleck Lowell. Mr. Lowell was a member of Fredonia Grange No. 1.

During his lifetime Mr. Lowell rose to a position of prominence in the state and nation. From 1916 to 1920 Mr. Lowell was Master of the New York

State Grange. During his term he was made Master of the National Grange, which high office he held until 1923.

During the World War, Mr. Lowell did outstanding work in connection with the Patriotic Farmers' Fund. In 1917, when plans were made to mobilize the agricultural resources of New York State, Mr. Lowell was appointed to membership on the New York State Food Supply Commission. In 1918 he was appointed to the Wood Fuel Commission and a year later he was a member of the Reconstruction Com-

mission. In 1926, President Coolidge appointed Mr. Lowell to membership on the United States Tariff Commission.

Mr. Lowell's Grange interests were varied. In addition to serving both State and National Granges as Master, he helped organize the National Grange Mutual Liability Association and in 1922 he became a director which office he held until his death. Mr. Lowell also helped organize the New York State Grange Exchange in 1917. The organization was succeeded by the present G.L.F. Exchange, of which Mr. Lowell was a director. He was also a member of the New York State Agricultural Society and the New York State Horticultural Society. Locally, Mr. Lowell was manager of the Pomfret Fruit Company from 1900 to 1910.

Surviving Mr. Lowell are his wife, Martha March Lowell; two sons, Clyde and Fred A. Lowell; six grandchildren and one great-grandchild.

FREEZING WEATHER AHEAD! PROTECT YOUR HEALTH With the Perfected UTICA HEATING SYSTEM

STEAM or HOT WATER Burn Coal, Oil or Wood

Just think—you can now enjoy the warmth, comfort and convenience of radiator heat with a Utica Heating System for as little as \$10.00 a month. Best of all—you can install now and you need make no down payment. You can have a warm comfortable home *this winter* and start paying for your heating system *next fall*! Take advantage of this opportunity—let us send our authorized dealer to explain how easily you can have winter comfort at low cost.

Utica Radiator Heating Systems are specially designed to burn all types of fuel economically and efficiently. You can burn wood or the cheaper grades of coal, or if you prefer automatic heat the Utica Redsquare Boiler can be converted to burn oil as a fuel.

**NO PAYMENT
UNTIL FALL**

When you buy a Utica Heating System you buy "Reliable Heating"—that means the economy, comfortable radiant heat and a purchase plan that fits your budget!

Red Square Boilers burn coal, oil or wood economically—they save your fuel dollars.

Utica Radiators bring even comfortable heat to your rooms without drafts or cold spots.

Utica Products are backed by our Utica Bond—your assurance of reliable heating!

Today in Aunt Janet's Garden

Make Plans While Garden Sleeps

ABOUT this time of year, gardening fever seizes me. The days are longer, the sun is brighter and the occasional blue sky fools me into believing that spring is just around the corner, even though experience has taught me that "when days begin to lengthen, the cold begins to strengthen."

In spite of this sad fact—sad for one who likes her weather sunny and warm—it is time to order seeds, make ready flats or pans for planting them, and to plan on paper the changes which ought to be made in the garden as soon as planting is possible.

A satisfactory soil to use in starting seeds is made by combining equal parts of clean sand, ordinary loam and peat-moss or some other good humus. I know that I do not need to remind any reader that this combination must be free from weed seeds, which would sprout even more quickly than flower or vegetable seeds.

If new hardy shrubs are included in the garden plans, they too should be ordered this month, keeping in mind their respective heights, time of bloom, color, texture of foliage, spread of the whole plant and preference for sun or shade.

In spite of my good resolutions, there is still pruning to be done, especially in the bush honeysuckles. They tend to grow too large and to have branches which crisscross, hence need some cutting every winter. The same applies to mockoranges and to Spirea Van Houtte, although in this case, I want to preserve the flowing lines and not cut it back until it looks stiff and stumpy.

And right here, let me speak my piece about running over the grass or flower beds while they are frozen. If a beaten path is made, or if the load is at all heavy, the marks will be there to show next summer and the grass or plants may be damaged beyond repair.

"My husband don't need no insurance! He's busy painting!"

Farm Washday Problems

by
MRS. GRACE WATKINS HUCKETT

Many sprays contain oil. A cupful of kerosene mixed in the tub of suds will help to dissolve this oil and allow the soap to do its work.

WASHING is washing, whether in a small city apartment or in a big farmhouse. That

is, the routine is much the same in either case—sorting, removing spots and stains, a short soak, washing, rinsing, starching if necessary, and drying. But there is the difference that on the farm there seems to be more stains to cope with.

Some of the special laundry problems on the farm, aside from the usual one of close contact with good old Mother Earth, are those resulting from handling of farm machinery and spray or dusting materials. These, however, need not cause worry if the laundry shelf or closet is fitted with some very simple remedies—common lard or kerosene for the heavier oils, greases and tars; glycerine for similar stains on the finer fabrics. As with any stain, these remove more easily while fresh. If they have dried, it may be necessary to repeat the application several times before final washing.

Overalls and work clothes stained with spray materials, especially if held together by oil, ought to be washed separately in a tub which has a cupful of kerosene added to the warm strong suds. Usually this is the last tubful washed and therefore needs soap added as well. Stubborn neck and wrist bands should have soap rubbed directly into them. Rubbing them with a soft bristled brush dipped in the suds is another great help.

Men's and boys' corduroy pants present winter laundry problems, yet they may be laundered with ease in the electric washer or washtubs using the ordinary laundry method of plenty of suds in lukewarm water. Squeezing is better than wringing since it leaves fewer creases in the nap. Press with a

On washday, a good washing machine is half the battle! If you are planning to buy one, you will want to consult our new Home Service Bulletin No. 8, entitled, "Buying A Washing Machine." This bulletin, which has been prepared by Mrs. Hockett, discusses the various types of machines, and points out what features to look for, and it will help you to choose the right one for your needs. If you want a copy of this new bulletin, write to *American Agriculturist*, Home Department, Box 367, Ithaca, N. Y. Be sure to enclose 3c to cover mimeographing and mailing costs.

fairly cool iron and brush nap with a soft brush to restore the soft finish.

In washing an old abused blanket, four or five tablespoonfuls of glycerine in the first tub of soapy lukewarm water will help to make the fibres somewhat softer so that the blanket may be stretched back into shape. For new blankets, two or three tablespoons of glycerine in the last rinse water help to keep them flexible. These quantities are right for a two to three pound blanket.

Before any article is wet or comes in contact with soap, stains should be removed. Those resulting from one of

Clean fabric and washable leather gloves while on the hands by brushing with a soft bristled brush dipped in lukewarm suds.

the following substances are ordinarily removed by the usual washing:

Beauty clay, bluing, butter, candy, carrot, fresh codliver oil, cream, egg, glue, iodine, milk, mud, orange juice, sardine oil, tobacco, and tomato.

Stains which may not come out in washing, and may have to be treated either before or after washing to remove them, are:

Blood, bluing, chocolate, coffee, cocoa, mayonnaise, meat juice, rouge, scorch, and tea.

Oxalic acid dissolved in water will remove bluing; hydrogen sulphate will remove rouge; Javelle water will remove the other stains. These chemicals are safe on white linens or cottons.

It is safe to wash practically all unknown stains in lukewarm, soapless water to see if they may be removed in that way before using stronger substances. Known stains which are met fairly often in farm washings, and which may be treated as follows, are:

Paint and varnish: Turpentine or carbon tetrachloride.

Rust: Oxalic acid (poison) or lemon juice.

Fruit juices, tea and coffee: Stretch material over bowl

and from a height pour boiling water through stain. If stain persists, rub with glycerine, let stand, then pour hot water through. Repeat until stain disappears.

Perspiration: Soak while fresh in lukewarm water. Neutralize odor by adding soda to rinse water.

Fresh fat: Wash in warm (not hot) soapy water.

Mildew: Any prepared bleach for white materials. Apply kerosene or milk to colored fabrics.

Blood: Apply cold water with salt so-

lution. For finer fabrics, sponge lightly with hydrogen peroxide.

Mud: Soak in lukewarm water; use bleach for white material, kerosene for colored.

Ink: Soak in milk or any bleach. For colored materials use ink remover.

Auto or machinery grease, tar, grass stains, rims on collars and cuffs: "Float" out stain with unsalted lard, kerosene or glycerine, then wash in warm, not hot, soapy water. For grass stains on white flannels, mix glycerine with egg white and leave on for several hours—then wash.

Lipstick: Rub lard in, scrape off excess and wash in hot soapy water. Bleach any remaining stains with chlorine bleach or hydrogen peroxide.

Tobacco: Soap and water, followed by lemon juice. Use Javelle water on white cottons and linens. Sponge wool with alcohol.

In this season of colds particularly, soiled handkerchiefs should be placed in a separate handkerchief bag. This helps to prevent spreading of the infection. Any towels or bed linen used by sick members of the family should be kept separate for the same reason. Boiling in strong suds and drying in strong sunlight will help further to kill any germs.

Washable leather or fabric gloves may be washed by putting them on the hands and working in suds just as you would soap your hands. A soft brush is a wonderful help in cleaning the fingertips, palms and other very soiled parts. Rinse in clean lukewarm water. Draw gloves off the hands from the wrist—not by pulling the fingertips. Then wash the inside in a fresh batch of suds and rinse carefully. Never wring gloves. Squeeze as dry as possible and roll in a towel to remove excess moisture. Blow into the gloves and lay them out flat to dry; before entirely dry soften them by working gently with the fingers. Any very delicate or expensive gloves should be cleaned by a professional cleaner rather than by home methods.

The Robin Will Sing Again

The Song of The Planter Through the Ages

By DR. E. A. BATES.

EDITOR'S NOTE: *Almost everybody knows Professor E. A. Bates, known affectionately to his friends as "Doc." Probably no man of his time is more familiar with Indian and early American lore than Doc Bates. In this piece of prose poetry, Doc has given us a picture of the feelings in the hearts of primitive people of different countries as they went forth again in the spring time to plant and sow. Our guess is that every farmer will share that feeling of hope and gladness as the warm sun calls him forth to his fields again.*

OLD AMERICA

GRAY CLOUDS hung low over the Indian village for many cold moons, and sad were the hearts of the red farmers and homemakers of old New York. Each morning now, the little chipmunk sought alms at the skin covered door of the long bark houses, for the freezing breath of the wintry wind had shriveled even the berries of the wintergreen. Huddled close to the family fires stood the strongest hunters, for the snows were now knee deep in the oak clearings and even the bone-dreaming dogs gladly ate crumbs of corn bread left from the simple meal of the family.

Morning and eventide the high priest watched the sun who each day shortened his smile upon the villagers. At each sunset hour the priest cut another

notch on his birchen bough, silent record of the golden ball creeping northward on his uphigh trail. Longer and longer grew the sunset chants of the mothers and even from the hearts of the little children fled hope, for their fitful dreams were but mirrors of the anxious eyes of their elders.

At length that noon came when the sun smiled but a moment, and by the signs of the high priest the ancient ceremony for the shortest day of the year begins. Snowy clouds overhead, a bone cutting wind from the hill, father and son slowly and prayerfully approach the little pond as the midnight hour comes. Other farmers and other sons now kneel with them on the shores of the ice covered pool.

It is the midnight hour, the priest breaks the ice with his birchen bough. Anxiously as one, father and son peer in the opening and see reflected the Star of the North.

As brook waters rush when the spring sun breaks its icy dam, so the taut heartstrings of the Indian farmer burst as he sees again the star. With tears in his eyes and arms upward to the sky, he speaks, "Blood of my blood and hope of my years, yes, the Robin will sing again." Homeward they go, knowing well that Mother Earth will soon nurse the corn seed in her bosom and the summer sun will bring forth

the ripened ear in the harvest moon of the autumn.

BABYLONIA

Moons and moons of travel from this hallowed scene of old America comes the misty vista of the planter in the ancient valley of the winding Tigris. Daily through the last cool months he has watched; but now he knows, for the snow cap on distant mountain has ceased its downward climb and the finger on the clay dial in the market place has touched the solstice mark.

With the midnight hour, he comes from his rude thatched hut and rouses his faithful ox, dreaming of a manger full of emer straw. Carefully fitting the simple, valued sinew tugs and single rein to the muscled shoulders of his awakened beast, he grasps the wooden handles of his crude plow. Looking upward to the same North Star of the Red Man, the barefooted Babylonian farmer starts a furrow straight for the sacred river, guiding his wooden plowshare by moonlight and only stopping when the nose of his ox meets the bank of the stream.

With his right hand on his heart and his eyes on the Star, he walks into the river; and when the waters reach his groin, he smiles, for millet planting time has come again. With a song of gladness on his lips, on he plows until the morning sun paints pink the roofs of the palace above the Hanging Gardens.

Cares not he, this happy planter, for the lights and the laughter from the palace. Heedless is he now of the singing strings and the flesh pots of the nobles drinking mid the palm trees. He only knows that the waters of the holy river will soon climb upon his acres and moisten and awaken the life within his kernels. For now, his loved ones and he shall have millet to eat and enough for that day when the Satrap will come in his chariot of gold to collect the ransom of the King.

EGYPT

The silvery moon seems to pause in the indigo blueness of the Egyptian midnight and a soft breeze is wafted through the papyrus reeds along the terraced river. The hot rays of the equatorial sun has melted the snows above the First Cataract and the warming waters have awakened the croco-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

Simple Things

A brown and crusty loaf I bring:
It is the song I cannot sing.
A little garment, pure and white,
Is the poem I cannot write.

A pot of scarlet blossoms fair,
A table set with loving care—
My heart's longings, thus expressed,
I give to those I love the best.

I cannot sing, nor write a poem,
But my heart's overflow,
In ever-widening circles, yields
The simple things I know.

—Anne Murry Movius,
Lidgerwood, N. D.

dile from his midwinter slumbers.

Waiting in the moon shadow of the lofty pyramid stands the dark hued Egyptian grower of grain, his eyes alone for a single figure standing with cymbals aloft on the banks of the queenly Nile. Upward and silently creep the waters on the royal guages set each seven miles along the riverbank.

A loud clang from the cymbals breaks the stillness of that Egyptian night and red blood rushes into the lean, dark arms of the planter. On his head, he places the wreath of the resurrection god Osiris, and from his leathern pouch his eager fingers sow the smooth grains of golden wheat.

Little thought gives he to the cloth wrapped mummy of the mighty Pharaoh sleeping in yonder pyramid. Questions not he, at this hour, why the coy smile on the face of the nearby sphinx.

Sure he now is that the red flamingoes will soon wade in the puddles of

THE STATE OF NEW YORK SAYS:

Look better, Feel better DRINK FRESH MILK

The Song of the Lazy Farmer

MY NEIGHBOR borrows off'n me most ev'rything I've got, by gee, he gits my hammer and my axe, when there is anything he lacks he beats it over to my place, then like as not I have to chase a-down the road to git it when I need to use that tool again. He borrows salt and borrows nails, and clevises and water-pails, there ain't a thing that he don't git whene'er he feels the need of it. He runs off with my whiffle trees and takes my hive to catch his bees, he borrows harrows and my hoe, and when I need it I can go and bring them things back to their shed, he never brings 'em back, instead, he's over here for something more. Mirandy says I should git sore and tell that man that he can chase his features off'n this here place.

But when I'm sick that feller sits out in my barn and pulls the tits of all my cows, he feeds the swine and hauls in fodder for the kine. There

ain't a thing that he won't do when needed for to see me thru a time of trouble or of need; he'll let his taters go to seed while he is here abuggin' mine. His disposition's mighty fine and helpful, and there ain't enough that he can do when things are tough to help a neighbor out of luck, so if he wants to take my truck or borrow anything I've got, he's welcome, for I've found there's not a single substitute, I guess, to take the place of friendliness; a neighbor who will help you when you need it is the best of men.

Beautiful Silhouette

3113

3114
EMBROIDERY
INCL.

THE "stem" silhouette, highly favored for small and medium figures, needs a corset to produce that slim, fitted look around hips, waist and midriff. Above this is shirred or draped fullness which accents the slenderness below it. Combine it with the princess back and low flaring skirt and you have a beautiful silhouette.

DRESS PATTERN NO. 3113 with its sleek princess lines and perky little bows is ideal for that late winter or early spring frock. Concealed zipper front closing and sweetheart neckline are added desirable features. Pattern sizes are 12 to 40. Size 16 requires 4 1/4 yards of 39-inch material.

LITTLE GIRL'S FROCK NO. 3114 is both charming and practical. Colored insets in the skirt match colored bright binding used for trim. Pattern sizes are 1, 2, 4 and 6. Size 4 requires 1 1/2 yards of 35-inch material, 2 yards binding, 3/4 yard 35-inch contrasting for dress; 7/8 yard 35-inch for panties. Embroidery included in pattern. Elephant Toy Pattern No. E-11202 must be ordered separately.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new fashion catalog.

The Robin Will Sing Again

(Continued from opposite page)

his black farm land, and at harvest time the flavor of anise will greet his eager nostrils from the browning wheat rolls in his bake oven. Gladly will be paid the guage tax of Cleopatra, heedless that sweat will come from his bronzed back in the planting and the

hailing. Now it is springtime in his fertile valley and wheat, his meat, and straw for brick and beast, are his again.

GREECE

On the smooth terraced stones encircled by the pillared Acropolis sits the Grecian dresser of vines while the silver tongue of the noble orator tells of the mighty Alexander and the golden sands of distant conquered lands.

But anon, there comes from the arched doorway of the sculptured temple the green-robed virgins in their ancient procession of the vernal equinox, each with their symbol of honored husbandry and the farmer knows that, above all, his vines, his wine and his raisens are the true glory of the Empire.

ROME

Tramp, clang down the military road march the legions of the Caesar and from all parts of the imperial empire come the shackled slaves and the sword wrung tributes. Towards the golden milestone in the heart of the Eternal City march they on, little noting that on yonder terraced hillside stands the simple Roman grower of root crops that made their conquests possible.

Bowed is his head as the Captains pass, but in his heart he knows that the laurel wreath they wear belongs on his own unkempt brow. He hears not the bugle call of the warriors for his ears are full of the spring song of the thrush in the olives, calling for a new reconquest of his own four acres.

NEW AMERICA

Only a bleak rock bound coast of a strange New World greeted the Pilgrim farmers and homemakers of middle England, and bars of sand and half sunk granites grated the keel of the Dutch Halfmoon. Cavalier, Swede, Quaker, Huguenot, farmers all, came seeking fertile soils, but first prayed for freedom for rural souls.

To you, my brother of the soil, and to all who joy in the springtime smell of the first furrow of the home acres, to all who feel in their blood the surge of the maple and the pink of the apple, America will live, if through faith, we say to our son, "Yes, the Robin will sing again."

More of "Living", Less of Strain and Stress

(Continued from Page 1)

fields, and brooks; fishing, hiking, rowing, gardening, and other sports.

4. Learn to like the songs of birds, the companionship of animals, the laughter and gaiety of children.

5. Learn to like the beauties of the sunrise and sunset.

6. Learn to like the form and movement of summer clouds and the roar of winter winds.

7. Learn to like work, to enjoy the satisfaction of doing a job a little better than you had thought it could be done.

8. Learn to like reading, conversation and music.

9. Learn to like people even though many of them may be as different from you as a Chinaman.

10. Learn to like life for its own sake—like to be alive!

Now that we are in the midst of war hysteria, perhaps a few more suggestions are in order.

1. Keep emotionally stable—don't listen too seriously to every day's every news item.

2. Don't believe everything you read or hear—much of it may be propaganda.

3. Don't forget to look in both directions before you cross the street. The automobile has killed more Americans than did the last world war.

4. Don't be so busy helping win the war that you can't help your neighbor.

We Believe You'll Like This New Yeast So Well

WE'LL SEND YOU A PACKAGE Free!

MACA YEAST Works Fast—Needs No Refrigeration

BY simply sending in the attached coupon you can introduce yourself to one of the greatest baking advances in years. In return for the coupon we'll send you absolutely free and without cost a FULL SIZE package of the new MACA YEAST—the new yeast that combines two advantages you've always wanted: 1—MACA YEAST is fast. 2—MACA YEAST doesn't require refrigeration!

We ask you to take advantage of this free offer so that you may more quickly learn about MACA YEAST, and because we feel that once you use MACA it will become your favorite—just as it has with thousands and thousands of other women. So you

do a favor for yourself and for us when you send the coupon for your free package.

Nothing New to Learn

There's no need to make any changes in your bread recipes when you use MACA—no tricks to learn. Just stir MACA in a cup of lukewarm water and it's ready to go to work for you. Think of the convenience of using yeast that you can keep on the pantry shelf—and still have a yeast that acts fast!

Send the coupon now. Get your first package of MACA as a gift! Most grocers have MACA or can get it for you. (If not, send dime for 3 packages, postpaid.)

FREE OFFER COUPON

Answers to Questions About Maca Yeast

In addition to its baking use of course Maca can be eaten. It contains vitamin B₁ and G and the other vitamin factors of yeast, all naturally present.

This Home-Mixed Cough Remedy is Most Effective

Easily Mixed. Needs No Cooking.

Cough medicines usually contain a large quantity of sugar syrup—a good ingredient, but one which you can easily make at home. Take 2 cups of granulated sugar and 1 cup of water, and stir a few moments until dissolved. No cooking! No trouble at all.

Then get from your druggist 2 1/2 ounces of Pinex, pour it into a pint bottle, and add your syrup. This gives you a full pint of truly wonderful medicine for coughs due to colds. It makes a real saving for you, because it gives you about four times as much for your money. It lasts a long time, never spoils, and children love it.

This is actually a surprisingly effective, quick-acting cough remedy. Promptly, you feel it taking hold. It loosens the phlegm, soothes the irritated membranes and makes breathing easy. You've never seen anything better for prompt and pleasing results.

Pinex is a compound containing Norway Pine and palatable guaiacol, in concentrated form, a most reliable, soothing agent for throat and bronchial membranes. Money refunded if it doesn't please you in every way.

Frank W. Lord, Farmington, N. H.

from SKEFF'S NOTEBOOK

By L. B.
SKEFFINGTON

SIGN OF SPRING: Plans are taking shape for the Western New York Apple Blossom Festival. Dates are May 17 and 18; the place, Batavia. The event in recent years has been heralded as one of the best publicized and most popular events upstate. Farm Bureaus, Home Bureaus, Granges, urban and civic groups have joined in developing a festival that promises to match the agricultural and floral festivals staged in some other sections.

Recently I was invited to address a meeting of Hudson Valley boosters in Kingston, to tell them something about the festival. For two years the Ulster County Apple Blossom Festival has been held at Kingston. This year it is to be enlarged to a regional affair and renamed Hudson Valley. Albert F. Kurdt, Ulster County Farm Bureau manager, is the spark plug of the organization in the valley.

Milk Agency Elects

Theodore H. Richards of Perry, a representative of the Rochester Guernsey Breeders' Cooperative, is the new president of the Rochester Cooperative Milk Producers' Bargaining Agency. He succeeds Harvey C. Way of Churchville, secretary of the Monroe County Farm Bureau, who wished to be relieved because of his recent election as town supervisor. Way was given much credit for heading the bargaining agency during its formative stage and helping to steer it through difficulties.

Ernest C. Strobeck of Macedon, director of the Dairymen's League, was reelected vice-president. Levi A. Higley of Elba, president of the Rochester Independent Producers' Association, is treasurer, and Oscar C. Smith of Livonia, president of the Western New York Milk Producers' Association, is secretary. A. C. Pilger of Batavia, president of the Genesee County Milk Producers' Association, was elected to the executive committee.

A resolution was adopted recommending state legislation requiring sanitary inspection for milk used in making ice cream, cream cheese and sweet butter, the same as now applied to fluid milk and cream. It was felt that so long as producers must make milk for fluid use under sanitary restrictions and receive pay for their surplus on this basis they should be protected from competition of uninspected milk.

Operation of the marketing agreement in the Rochester area to date was said to be generally satisfactory. Prices for December, first month under the marketing agreement, were increased substantially through united action and cooperation of a great majority of producers.

* * *

Apple Tax Studied

Although personally I have taken no stand for or against a proposed apple advertising tax I have been much interested in discussion and comment at various meetings I have attended this winter.

In 1938 the State Grange recommended such a tax, provided the apple industry wanted it. In December 1939 the Grange adopted a resolution favoring such a tax, to be administered by a growers' commission. The State Horticultural Society meeting in Rochester last month adopted a resolution which might be construed as favorable to the principle of such a tax, but definitely opposing enactment of tax legislation this year until the society would have

opportunity to study its operation and administration. In the meantime the society is favorable to any legislation that would provide machinery by which the industry would be enabled to administer such a tax if and when levied.

At Kingston, President J. Wessel Ten Broeck, Jr., sent a message to the society saying that "advertising for apples had become a necessity—if such a tax bill is introduced this year it should be laid over for a year so that growers may have an opportunity to study and discuss it. Then if such a tax should be desired it should come from the growers themselves and should be administered by growers."

Most of the people who have talked to me about the subject appear favorable to the general idea, but agree with Mr. Ten Broeck.

Why Advertise?

Addressing growers at Kingston, Major C. E. Chase, secretary of the Washington State Apple Advertising Commission, answered many of the questions on the subject. As to whether there is opportunity to expand the consumption of fruits and vegetables he pointed out that present consumption, according to government statistics, forms only about seven per cent of the diet, whereas about 30 per cent is recommended.

Major Chase said most of the competition apples face comes from other fruits and must be met nationally, as well as locally, through advertising. He said he believed Washington growers would be willing to pool their funds nationally with growers in other sections for general advertising and promotion of apples. At the same time, showing what can be done within the various regions, he said Washington had increased consumption within its borders by about 300 per cent.

I still think Northeastern growers are in a key position on this matter. On a production and population basis, they produce a deficiency of apples. Their nearness to the great consuming centers makes their problem a regional rather than a national one. The advantage accruing to them, however, in increased national consumption might be decreased shipments from other regions to compete with them in eastern seaboard cities.

* * *

National Institute Coming

Meeting of the National Apple Institute will take place in Rochester, probably during the week of April 14. Originally it had been proposed that the institute again meet in January, the time of last year's meeting in Martinsburg, W. Va. However, meetings of state horticultural societies and apple marketing campaigns in various sections made it advisable to change the dates. It is now planned that the national planning committee, composed of growers and extension service representatives from various states and the federal government, will meet during the same week.

* * *

Joint Group to Meet

The initial meeting of the joint fruit committee set up by the State Horticultural Society and the Farm Bureau Federation will be held in Rochester sometime after Farm and Home Week. Some suggestion had been made that it meet at Ithaca, but it was felt there would be so many diverse interests that both growers and technicians might not be able to put in a full day or work in getting a program lined up.

It will be recalled that a similar joint committee set up in 1929 spent about two years at the job before it was disbanded. First thing the committee may decide will be the scope of its program. The former committee covered everything from varieties and cultural problems to packaging.

There apparently is urgent need to settle the box question. An eastern apple box conference last year made recommendations recommending the so-called eastern apple box, and another one designed to load in railroad cars. The Kingston meeting recently adopted a resolution urging that these be made legal packages. I also understand one Western New York fruit committee has acted in favor of another box. On top of all of this a question to be answered is whether the standard box should contain one bushel, one and one-eighth bushel, or one and one-fifth bushel.

In the days of the bushel basket a bulge pack came to be favored. When the box came in the idea was that it should contain as much as a bulged bushel basket, but without a bulge on the box. Now we have bulged boxes, much confusion and some dissatisfaction. Questions have been raised as to whether some of these boxes may be made legal containers except on a basis of numerical count or weight. Whatever the answer, it should provide for uniformity and utility.

Milk News

A bill carrying an appropriation has been introduced into the New York State Legislature calling for another investigation of milk markets. The idea seems to be that some magic can provide more returns to the farmers and still have the consumers pay less. It is difficult to see what possible benefit can be gained from spending the taxpayers' money for another milk investigation at this time.

* * *

An unnamed spokesman for the New York City Board of Health has stated to the Dairymen's League that the Health Department does not intend to make any requirements that will add to the cost of milk production or require any very material changes in the conditions now met by dairy farmers supplying milk to New York City. This, if carried out, will be welcomed by dairy farmers who feared that Mayor LaGuardia's recent statement about eliminating Grade A milk would be followed by a stiffening of the requirements under which Grade B is produced.

* * *

A Milk Marketing Order for the Washington, D. C., marketing area went into effect on February 1. The Market Administrator is C. I. Dunn of Alexandria, Virginia.

The Potato Market in Up-State New York

Prices have been steady for the past two weeks at around \$1.30 cwt. for U. S. Commercial Smooth Rurals and Russets—\$1.40 for U. S. 1 Smooth Rurals and Russets, and \$1.60 for brushed, 2" minimum, U. S. 1 Katahdins, Chipewas and Green Mountains. These are top figures for potatoes packed as listed in new sacks, loaded in cars for shipment.

Peck packages, packed under the State Trade Mark, have been bringing 30c to 32c on the wholesale markets with U. S. 1 stock bringing 25c to 27c. A larger percentage of potatoes are being packed this year than last and for the most part the potatoes being sold in bulk are not as good a grade as those going into the peck packages.

The freezing weather that went as far south as Florida did not do as much damage to potatoes in the south as it did to green vegetables and, in my opinion, the freeze will have no appreciable effect on prices. Because it will delay planting and harvesting somewhat, it extends the marketing period for old potatoes a week or ten days longer.

The worst damage was in Dade County, Florida, where the potatoes

have been planted from 60 to 90 days. These vines were frozen to the ground and will not recuperate. Dade County will ship about 700 cars where last year she shipped 2200 cars. Northern Florida potatoes for the most part had not emerged and were not affected by the frost which froze the ground about two inches. The fact that these potatoes were planted late saved the owners a replanting job. While some seed not planted, may have been chilled in temporary storages, this damage was very slight because the growers were warned of the cold spell and had an opportunity to protect their seed.

According to available statistics there are about 63,000 cars of old potatoes to go to market after February 1st. Last year about 62,000 were sold in February, March and April. With the season somewhat extended on account of the freeze and the supply on hand of old potatoes not exceedingly heavy, the market looks healthy from now on.—H. J. Evans.

Mohawk Valley Baby Chick Show

For five years the Mohawk Valley Baby Chick and Egg Show has been an outstanding success, and there is every reason to believe that the Sixth Show, to be held February 27 to March 1, will equal and probably exceed past shows.

Howard Chesebro of Schenectady, who is Chairman of this year's show, says that all commercial exhibit space has been sold and that entries of baby chicks have been received from breeders in New York State as well as from other states.

The event is more than a show. There are educational movies, demonstrations and discussions; and on the last day of the show there will be a public auction where all chicks and eggs will be sold.

A big feature of this year's event will be active participation by all eastern New York counties in staging a mammoth 4-H Egg Show. It is expected that over 150 carefully selected entries of eggs will be entered by 4-H poultry members.

Farm Briefs

At the Second Annual Meeting of the Niagara Frontier Cooperative Producers' Bargaining Agency resolutions were passed requesting the Federal Government to restore the independent status of the Farm Credit Administration and favoring a hands-off policy on the Rogers-Allen Law for at least a year.

* * *

On February 1 the new Dairymen's League plant at Little York, Cortland County, N. Y., was opened for receiving milk. The old plant burned August 28, and from that time until the new plant opened, the milk of League members was diverted to Cortland and Homer.

* * *

At a recent Farm Show in St. Lawrence County, C. E. Small, 77-year-old farmer of Gouverneur, was named Corn King of St. Lawrence County. Beniah Morrison of Rensselaer Falls won the first honors in the hay division. Both Mr. Small and Mr. Morrison received silver loving cups as tokens of their championships.

* * *

The State Institute of Applied Agriculture at Farmingdale, Long Island, is holding its annual Country Life Program on February 28 to March 2. There will be demonstrations and exhibits of interest to Long Island farmers, and as usual a large attendance is expected.

* * *

National Cherry Week is to be celebrated this year from February 15 to 22. As its part in the observance, the New York State Department of Agriculture and Markets is furnishing a recipe book on cherries. If you would like to have one, drop a post card to: Consumers' Information, Department of Agriculture and Markets, Albany, New York.

From Chicago to the West Coast, our home will be aboard the Northern Pacific Railway's beautiful "North Coast Limited." Meals are served in the dining-car, and are famous the world over for their excellence, generous servings, and wide variety of choice offered. There are no better meals served anywhere, say those who have gone on other tours with us!

LAST CALL

for A. A.'s Western Tour, Feb. 24-Mar. 18

ON FEBRUARY 24—just one week from Saturday—happy A. A. folks will climb aboard our train and start off on one of the grandest trips that anyone could take. Reservations for our tour are coming in from every state in the Northeast, from Maine to Maryland. Some who are going are old friends who have traveled with us before and so know exactly what to expect. They know that an *American Agriculturist* tour means three things:

First, a real vacation, entirely free from worry, because our representative goes along and takes charge of everything. Unless you have gone on one of our tours, you just can't imagine the kind of service we give. If you were taking the trip with your own family, and had a fairy godmother along to see that you got the best of everything and had absolutely no travel worries, you couldn't have a happier, more carefree, more interesting trip than this one we have planned.

Second. An A. A. tour means a chance to see magnificent scenery, historic places, as well as things of agricultural interest across this broad land of ours. On this trip, we will be gone three weeks and two days (Feb. 24 to March 18), and not the least of its advantages is that we will leave behind the wintry East for the mild, spring weather of the Pacific Northwest and the warm, sunny clime of California. We'll make a grand circle tour of the West, which will include the whole Pacific Coast from Canada to the southern tip of California. On our way West, we'll have the marvelous experience of crossing the Great Divide and seeing the majestic, snow-covered Rockies. Coming home, we will swing round by Texas, crossing the border for an afternoon in old Mexico, and later spending 24 hours in the south's most fascinating city, New Orleans. We are going to spend two days visiting Yosemite National Park, and Claud Murwin, of Otego, N. Y., who has visited it, writes us:

"If one only saw Yosemite Valley on your trip, it would be worth the whole price of the tour. I have seen most of North America, and Yosemite is the outstanding scene."

And, **third**, an A. A. tour means meeting and traveling with just about the nicest folks in the world. It means making new friends, new contacts. It means a complete change which will take you out of yourself, make you forget your worries, give you a new lease on life, fill your mind with happy thoughts, beautiful sights, interesting places, and leave you with memories that will mean much to you the rest

of your life. Don't hesitate to come with us because you don't know anyone who is going, or because you have never traveled, or for any similar reason. We can make everything pleasant and comfortable and easy for you, so easy that you will wonder why you ever hesitated.

A letter which we have just received from Mrs. John L. Whitaker, of North Weare, N. H., expresses so vividly how people who have gone with us feel about our tours that we are quoting part of it:

"I know you have had many letters from those who went on last year's A. A. tour, but I am sure none of the folks who wrote you had a better time than I did. It was the most comfortable and enjoyable event of my life, and I want to go on this coming tour so badly that it hurts. I have been in touch with several other members of last year's party, and they, like me, are just as eager, and wish they might be one of this year's group. Bless the *American Agriculturist* and long may it live!"

How much does this wonderful trip cost? Approximately \$325.00 for our "all-expense ticket" (and this includes everything, even tips, and is less than you could possibly do it alone). If you want to come with us, we urge you not to wait until it is too late. There is still time, but you will have to hurry in order for us to get your ticket to you, and to make arrangements with you about where to get on our special train. Write at once to E. R. Eastman, *American Agriculturist*, Box 367 Ithaca, N. Y. Our telephone number is Ithaca 31046. We are giving the number here because last year some folks would have missed the trip if they hadn't used the telephone. But don't wait until the last minute. *Write today*. And remember that if anything happens to prevent your going, we will refund every cent you have paid.

To make your reservation, simply write to Mr. Eastman, and enclose \$5.00 (for each person in your party). State where you would expect to get on our train (which leaves New York City at 9 a. m. Feb. 24, and will pick up members of our party at Albany, Utica, Syracuse, Rochester, Buffalo, and Cleveland). Also please state whether you would rather have a lower or upper berth on the train, as there is a slight difference in cost for a lower berth. Then as soon as we hear from you, we will let you know the exact cost of your ticket and arrange to get it to you in time for the trip; and also give you any other information that you need.

We hope you'll decide to come with us. We will enjoy having you along, and we know you'll enjoy every minute of this wonderful trip.

Mother! It's a Crime
to "GROPE"

When Your Child CATCHES COLD

WHEN colds strike and spread misery—stiffness, coughing, muscular soreness or tightness—it's no time to "grope". It's no time to experiment with untried remedies or risk upsetting the stomach with constant internal dosing. Most mothers realize this.

So to relieve discomfort they use the external poultice-vapor treatment developed specially for children... VICKS VAPORUB.

Massage throat, chest, and back thoroughly with VapoRub at bedtime—then notice how this home-approved treatment works! You will like it, and so will your child.

VICKS
VAPORUB

Ideal for Children...

Just as Good for Adults

Relieves Misery 2 Ways... Almost before you have finished applying VapoRub, it starts to relieve colds misery two ways at once. It acts on chest and back like an old-fashioned warming poultice. And at the same time its pleasant—helpful—medicinal vapors are released by body heat and are breathed into the cold-irritated upper air passages.

On into the night VapoRub's poultice-vapor action keeps on bringing relief. It invites refreshing sleep as it soothes away misery. And by morning you will probably understand why Vicks VapoRub is a family standby in 3 out of every 5 American homes.

Kernels, Screenings and Chaff

By H. E. BABCOCK

HITLER the Hog led with his snout. Jim the Jackass side-stepped nimbly. Again Hitler charged, this time with his full weight behind a shoulder thrust calculated to throw Jim off his feet. Once more Jim pivoted out of the way. Then, like lightning, Jim struck. He caught his opponent right back of the ears in his great jaws. As he crunched Hitler's spine, the hog stiffened in pain. Bracing his forefeet, Jim heaved Hitler off his feet and shook him like a rat. The hog's little red eyes seemed to pop right out of his head. He squealed and slobbered in his agony.

Then Jim dropped him. For a minute Hitler's legs sagged under him. Then fear spurred him into action. Half rolling, half scrambling he threw himself from Jim's reach. Squealing at every jump, he sought the safety of his corner.

Thus ended the battle of the barnyard for the heavyweight championship of SunnYGables.

Apology

Ordinarily this column is reserved for the discussion of weighty matters—the New Deal—the dictatorship of Henry Wallace—the price of gold—and the advantages of an agricultural credit system free from political control.

This time, however, sheer weight of public opinion forces temporary abandonment of our efforts “to save the world for democracy”, or what have you, in order to report with the greatest possible speed the outcome of that epic battle for the heavyweight championship of the barnyard, Hitler the Hog versus Jim the Jackass.

All Bets Off

For days the bets have been pouring in. Hermie Crofoot of Moravia got the first ten cents down. He picked Hitler in the first round. As promoter, match-maker, and referee, however, I am calling all bets off. I cannot stand idly by and see the public gypped.

Furthermore, unwittingly—but nevertheless effectively—because nine out of ten picked him to win, I myself am guilty of spreading a false idea of the prowess of Hitler the Hog.

Strength Overstated

When the boys told me that in his zeal to be dictator of the barnyard this Hitler of the animal world had boosted a mare over the fence, I at once jumped to the conclusion that it was Lady, a gray mare which weighs all of 1500 pounds. Then, when a reader of Kernels, Screenings and Chaff accused me of telling a tall story, I checked up. To my everlasting embarrassment I found that it was not Lady which got into the mixup with Hitler, but Babe, a much smaller mare which will weigh a scarce 1200. Thus, quite without intending to do it, I gave out the impression that Hitler had performed a feat calling for at least twenty per cent

more strength than the one he actually accomplished.

Then, too, few readers of K. S. & C. noted my report that Hitler had had his tusks removed by a veterinarian. So, under the circumstances, as I have already said, I am calling all bets off.

A Lot of Fun

At any rate, the fight was a lot of fun and, personally, I found it a relief from tilting with the government. *This same government of ours, incidentally, so I hear, is now reaching out to curtail the shipment into the United States of Canadian wheat feeds, stating that Northeastern dairymen and poultrymen can get along without them and in their place use corn out of Mr. Wallace's bulging ever-normal granary—corn at a price which represents not the market but the political purchase price of Midwest farm votes.*

* * *

Ever-Normal Haymow

Two years ago, when Secretary Wallace began to push the idea of his ever-normal granary I made the suggestion that what the Northeast needed most was an ever-normal haymow. As a matter of common justice, the government in fact ought to extend to farmers in the Northeast the same subsidies for storing surpluses of hay it does to Midwest farmers for storing corn.

Unfortunately, however, there is no one in the present United States Department of Agriculture, at least up

around the top, who has any idea of the importance of hay to the Northeast. At any rate, at SunnYGables we took advantage of good hay crops in 1937 and 1938 to build up a surplus supply. We expected to have to use much of this surplus this winter. However, our grass silage has “worn” so well and the sale of a bunch of beef cattle has so lightened our use of hay that we are going to bale the ever-normal haymow and sell it for some good hard cash.

Incidentally, part of the cash we get we will re-invest in nitrogenous fertilizers to use on some of our old meadows which went into the fall looking pretty hard in an endeavor to get a good crop of hay off them this coming summer.

* * *

Shotgun Breeding

There has come to my attention a bull calf which represents in his pedigree all of the major dairy breeds. Since this calf has already been sold for veal and therefore no one can be accused of trying to perpetuate his miscellaneous ancestry, I am taking the liberty of reproducing here the account of how he was bred. This account is furnished me by my good friend Tom Milliman of Hayfields, Churchville, New York. Tom, as many readers of this page know, is primarily a breeder of purebred Guernseys, but he keeps a few grade Guernseys on the side and for the fun of it ventures occasionally into the field of cross breeding.

Mr. Milliman writes:

“Last week I reluctantly decided to sell for veal the finest looking bull calf ever born on the place. His breeding is:

1/32 Ayrshire
2/32 Jersey
7/32 Holstein
8/32 Brown Swiss
14/32 Guernsey
32/32

“It came about this way. In 1925 I bought a mixed Jersey-Guernsey cow and she was bred to a registered Guernsey bull purchased from H. E. Babcock. The resulting heifer calf born

in 1926 became known as Rubber Teat, my No. 54. In 1939 this cow, on 3 teats, produced in 271 days, 10,285 lbs. milk, 482.0 lbs. fat.

Her calves were mostly born weak and under my rough conditions I was able to save only one heifer calf which has turned out to be fully equal to the dam. Having in mind the weakness of Rubber Teat's calves, I had her taken to a Brown Swiss bull owned by D. N. Boice of Churchville. He is Blancus which was senior Grand Champion Brown Swiss at the 1939 National Dairy Show. Rubber Teat dropped a cream colored heifer calf much like herself whose blood lines are:

1/8 Jersey
3/8 Guernsey
4/8 Brown Swiss

“I had in mind breeding her to the Onderdonk registered Guernsey bull that is on lease to me. Suddenly one Sunday at the farm I realized that if I bred her to Mt. Hope Karoly, cross bred bull from E. Parmelee of Williamstown, Mass., I would get a calf carrying 5 breeds. The temptation was irresistible. She was bred after the truck had arrived to transport the bull to Massachusetts, that is, in the last 5 minutes of his stay. This bull is:

1/16 Ayrshire
7/16 Holstein
8/16 Guernsey

and now heads the herd of Jacob Menzi of Westerly, Rhode Island, a D.H.I.A. member.

“The cream colored daughter of Rubber Teat appeared on Sunday, two days after freshening, to be as nearly perfect a 2½ year old as I have ever had on my farm. If she doesn't milk well, she will constitute a denial that form means anything in a dairy cow. Her son had the warmest golden, solid Guernsey color I have ever seen and was the embodiment of strength, straightness, and form. Not running an experiment station I had to part with him but I did so with deep regret.”

* * *

I just received a letter from Charles O. Edwards. I would like to answer it but the address was omitted. If Mr. Edwards will write again I'll be glad to reply.

Grass silage continues to be one of our major successes at SunnYGables. This year we have perhaps the best grass silage we have ever made. As I have previously reported, we have fed about sixty head of young cattle out of one silo all winter on nothing but grass silage and a little grain. Undoubtedly, it would have been better to have also fed a little hay, but we did not have it available in that barn. These young cattle, mostly Hereford heifers, have grown splendidly and today are in tip-top condition.

The picture shows the rig we started out with five years ago to draw green hay from the field to the chopper. Several things were wrong with it. The iron wheels on the wagon and the hay loader made the rig draw too hard when it was picking up a heavy swath of green hay to

make it practical to put on much of a load. Mounting both the wagon and hay loader on second-hand rubber cut down the draft. Then, the hay rack was entirely too long. A twelve-foot rig is plenty long enough to use for green hay. Finally, we used two men to drive the team and make the load. By using a shorter rack, one man can do both jobs.

We are now working on a two-wheeled, trailer-type rig, to be horse drawn, which can be used for picking up green hay AND WHICH WILL DUMP ITS LOAD AT THE SILO. It is much easier to pitch green hay into the chopper when a man stands on the ground—and particularly when the chopper is partially sunk in a trench—than it is to pitch it off a wagon.

Protective

SERVICE BUREAU

MEMBER
AMERICAN
AGRICULTURIST
PROTECTIVE SERVICE

Conducted by H. L. COSLINE

AT A RECENT Subordinate Grange meeting, I gave a list of twenty statements on Service Bureau matters to the members. Some of the statements were true and some were false, and the members were asked to label each statement either "T" or "F". As you may imagine, there was considerable disagreement, but out of it all we had a good time and cleared up some points of misunderstanding.

I won't be able to mention all of the statements, but thought you would be interested in a few of them.

1. Life insurance companies must be licensed by the State Insurance Department before they can do business.

As worded this statement is false. Practically every state has a law requiring that life insurance companies must be licensed before they can do business through agents who call on prospects. However THIS DOES NOT prevent companies in another state from soliciting business by mail. It doesn't necessarily follow that companies that do a mail business lack reliability, but it is true that in the event of a misunderstanding with such a company your State Insurance Department can be of little help as it does not have jurisdiction. Therefore, it seems wise to deal with licensed companies, or at least to deal with unlicensed companies only after you have made an investigation to be certain they are reliable. The North American Accident Insurance Company is licensed to do business in Northeastern States.

2. A verbal promise by an agent is worthless if it disagrees with a statement on a signed order or contract.

This statement is true, but in spite of that fact many letters to the Service Bureau quote what the agent promised. Some agents just do not have the moral stamina to lose a sale when a verbal promise can save it. It follows that it is extremely important to read an order or contract to be sure you understand its provisions. It is easy to see that a company doing business through agents could not bind itself to any promise that an agent might make. Incidentally, it is well to remember that a good many of the order blanks used by agents are in reality contracts, and once you sign one, it is not simple to avoid meeting the terms of the agreement.

3. The words "blood tested" in a baby chick advertisement guarantee the chicks will be free from pullorum disease.

This statement is false. The words "blood tested" indicate that the breeding stock has received a blood test for

pullorum. The assumption is that the reactors have been removed, but one blood test does not necessarily get every reactor. A better statement is "breeders blood tested until no reactors are found." This signifies a following up of the testing program until the entire flock is clean.

4. Most old coins are valuable.

This is another statement that is false. The value of old coins depends on their rarity rather than their age. The chances that any person has an old coin of great value are, of course, exceedingly remote, but there is that possibility. There are numerous companies doing business in old coins, some of which are not entirely reliable. Collecting old coins is an interesting hobby, but it is not easy to get appraisal by an expert of the value of old coins. Frequently this appraisal costs money, and it may cost more than the coins are worth.

5. A judgment against a debtor cannot be collected if he owns no property.

This statement is correct. Bringing civil action against a debtor may result in a judgment which can be collected if the debtor owns unencumbered property. If the debtor has no property, the judgment can be filed with the County Clerk; and if the debtor later acquires property, it may then be collected. In times past many countries had laws permitting debtors to be put in jail, but not now—at least in this country. This indicates the importance of investigating the financial worth of a debtor before going to the expense of securing a judgment.

6. It is a criminal offense to give a check without funds in the bank to cover it.

This statement is correct. It seems to us, judging from correspondence we have had, that this law is being used more than it once was, although there is at least a tendency to take into consideration whether the giver of the check is deliberately trying to defraud or whether it was an error. Some buyers of farm produce give checks with the expectation that they will sell the produce and have the money in the bank by the time the check arrives. Sometimes things go wrong, and it doesn't work out that way. I talked with one man recently who said that he never would accept a check for produce and always demanded cash, even if it required the unloading of produce already on the buyer's truck. "Usually," says he, "they will come across with cash if they know they must."

Where is Edward Madsen?

Under date of December 12, 1939, we received information from Denmark telling us that the grandfather of Edward Madsen, whose address was Gleen St., Odense, Denmark, had died. We have no way of reaching Mr. Madsen directly. It is believed that he operates a farm, so if any of our readers know his address, we would appreciate their giving him this information, and asking him to communicate with the Service Bureau.

No Inspection

"Do I have the right to inspect goods sent c.o.d. before I pay for them?"

Buying goods c.o.d. is often a handy arrangement but postal regulations do not permit opening the package before paying the charges, and then returning it if not satisfied.

To profit by our guarantee, be sure to mention *American Agriculturist* when you write to advertisers.

A Ford V-8 Truck for Every Farm Use

If you raise cash crops and feed livestock—you'll find either the 134-inch or the 158-inch Ford V-8 Truck* with platform body ideal, depending on the size of your place. Work a Ford Truck anywhere. It makes money by keeping busy.

If you have a dairy herd—the 112-inch Ford V-8 Pick-Up is just the thing for handling milk cans and doing odd jobs around the place. The bigger dairy will find the medium-size 122-inch Ford Truck a practical unit.

If fruit and vegetables are your main crops—a Ford V-8 Cab-Over-Engine* is just the truck. Ample load room with a minimum of over-all length so that you can back up to an unloading platform without blocking a busy street.

YOU want a truck to be a farm implement today—not just a load mover where the roads are ideal. See if the Ford V-8 Truck isn't just what you're looking for. The quickest way to find out is with an "on-the-job" test in your own fields and roads.

This year brings the most complete line of Ford V-8 Trucks that Ford has ever built.

There are forty-two different body and chassis types. Four

wheelbases for conventional units and three for Cab-Over-Engine trucks. Three V-type, eight-cylinder engines—95, 85 and 60 hp.

This means you can select a Ford V-8 Truck in which engine, wheelbase, chassis and body are matched to fit your needs. You can get a Ford V-8 Truck with gear ratios that not only make time but move big loads. Arrange with your Ford dealer for that "on-the-job" test.

Dried Skimmed Milk Back in G.L.F. Mash

DRIED SKIMMED MILK, very scarce in recent months, is again in good supply. Beginning February 12, it is being used in these G.L.F. mashes:

Super Laying Mash
Super Laying & Breeding Mash
Laying Mash Supplement
60-40 Pellets

Dried skimmed milk for animal feeding is a "surplus" product. If there is enough left over after the supply needed for human use has been taken care of, the feed industry can get it at a reasonable price. If there isn't enough to go around, the price goes out of sight. Eventually it can't be had in large quantities at any price.

That is what happened last fall. Dried whey, the other important dried milk product, also rose in price; but was plentiful enough so that it could be had for feeding purposes.

Other Vitamin Sources

When dried skimmed milk can't be bought in sufficient quantities, poultrymen have to feed something else to supply the health- and growth-promoting vitamins they usually get from milk.

Fortunately, there are other approved sources of these vitamins. The two used by G.L.F. during recent months are **lactoflavin supplement**, which is a mixture of milk powders, soybean meal, and a concentrate of milk vitamins; and **dried brewers' yeast**.

The lactoflavin supplement has now been replaced by dried skimmed milk in the mashes listed above, since many poultrymen have expressed a strong preference for milk when it is available.

Two Start & Grow Formulas

Because dried brewers' yeast has proved itself as a valuable and economical vitamin source, it will continue to be used in Special Laying Mash and Starting & Growing Mash. The formulas of these two feeds remain unchanged.

For those who prefer it, however, the 1939 formula for Starting & Growing Mash is available, with dried skimmed milk included.

As long as dried milk products can be obtained in the quantities needed by poultrymen in this area, G.L.F. will continue to include these excellent and valuable feeds in the mash formulas.

A big part of your poultry success or failure is in the chicks when you get them, so it's important to buy chicks from a reliable hatchery. Good breeders and hatcherymen do these things:

1. Select breeding stock for size, health, type, and production characters.
2. Blood test the breeders and remove any that show signs of B.W.D. (pulsorum disease).
3. Set only big eggs with good shell texture and color.
4. Incubate with the best equipment so that chicks hatch out in good physical condition.
5. Pack chicks carefully and deliver by the quickest possible method to avoid chilling and overheating.

Are you short of Hay?

IF YOU ARE SHORT OF HAY and can't buy any locally at a reasonable price, see your G.L.F. Service Agency for information and prices on the G.L.F. roughage supplement program. Three feeds are available:

Oat Feed: About 75% the feeding value of good hay. Low in protein, so it should be used with a high protein feed such as 24% Milk Maker.

Oat Feed + 25% Molasses: Ten pounds will replace 11 lbs. of good hay. Very palatable. Feed with a 24% grain ration.

Roughage Supplement: About the same protein as good hay, a little less fat, much less fiber, and more feeding value. Three pounds will replace 4 pounds of hay or 12 pounds of silage. Formula—400 lbs. wheat bran, 500 lbs. corn meal, 300 lbs. beet pulp, 500 lbs. oat feed, 300 lbs. molasses.

Success can be bred into the chicks

BREEDING is the most important thing in getting results, whether it be with race horses, dairy cows, field corn, or laying hens.

In buying chicks, the quality of the chick means more than a few cents in cost because the chicks, when you get them, have inherited the ability—

- to grow to a certain size.
- to feather out quickly or slowly.
- to grow fast or more slowly.
- to reach egg laying maturity at a certain age.
- to lay a certain number of eggs.
- to come through the first laying year with 90% livability—or a lot less.
- to lay eggs of a certain size, color, and interior quality.

Since these things can spell success or failure in the chicken business, it is important to know what's in the chick.

A high price does not always mean good chicks. You have to know something about the hatcheryman.

You can avoid a lot of grief by buying from a hatchery that you know to be reliable—preferably one fairly close to home, so the chicks won't get chilled on the way or go hungry too long.

Once you have the chicks, all you can do is feed and manage them so as to get the most out of their inherited capacity.

The best feed and the most careful management can't bring success if the chicks aren't right to start with.

G.L.F. is interested in encouraging the purchase of good chicks from nearby hatcheries, because a lot of poultry troubles which are sometimes blamed on feed can be eliminated by starting with the right kind of chicks.

Kelly herd wins award

JAMES KELLY of Titusville, Pa. won a signal honor at the Pennsylvania Farm Show last month. His Guernsey herd received the award as highest herd of all breeds on twice-a-day milking. Jim Kelly is (1) a G.L.F. agent-buyer and (2) a long-time user of G.L.F. feeds.

THE FARM PAPER OF THE NORTHEAST

Strawberries

for the HOME GARDEN

by Geo. L. Slate

New York State Agricultural Experiment Station

IN HIS immortal work, "The Compleat Angler", Izaak Walton quotes a Dr. Boteler as saying of the strawberry, "Doubtless God could have made a better berry, but doubtless God never did." This remark was not made by one whose knowledge of strawberry quality was derived from the sour, tough half-ripe berries that are so common on northern markets before the home grown berries are ripe. To have this delicious, but highly perishable fruit at its best, and to tickle the palates of those who have eaten poor quality strawberries for several months, the berries should be grown by the best cultural methods in the region where they are to be consumed. In the production of this fruit is an opportunity for many small growers in densely populated New York and southern New England. There are already too many poor or medium strawberries. Fancy, high quality strawberries, even at a substantial premium, always find a ready sale.

SOIL REQUIREMENTS. Fancy strawberries are produced only on good soil, the preparation of which must be started a year in advance of setting the bed. A well-drained sandy loam, well-supplied with organic matter to maintain its moisture-retaining properties, is best for strawberries. Lighter and heavier soils will do if in good tilth and well-supplied with humus, which tends to improve the structure and moisture relations of these types. Soils not well-supplied with organic matter should have a heavy growth of clover or some other legume turned under the previous season, and if a hoed crop can be grown the year previous to setting the berries so much the better. Stable manure at the rate of 20 to 40 tons to the acre is unequalled as a source of organic matter for the strawberry bed.

Thorough preparation of the soil to produce a loose mellow condition is necessary for quick starting of the plants and rooting of

*Strawberries are never
better than they are
when first picked.*

the runners. Superphosphate at the rate of 600 pounds to the acre may be harrowed in while the field is being fitted.

WHEN TO SET. Set the plants as soon as soil conditions will permit, not much later than May 1st in New York, and preferably earlier when possible. It has been

shown that runner plants which root in June will bear 15 times as much fruit as those which do not root until September. Early planting under conditions that get the plant off to an early start probably does more to promote big yields than any other single cultural operation.

VARIETIES. Strawberries vary greatly in the characteristics that make a good variety, and of the many listed by nurseries only a few are worth growing. HOWARD (*Premier*) is at present the most widely grown variety in the north. Its reliability is its chief asset. CATSKILL is rapidly forging ahead in acreage and may soon be the leading variety in the northern states. It often yields more than Howard (*Premier*) and the berries average larger than those of any other commercial variety. Catskill is first choice for commercial plantings of any size and should be in every home garden.

FAIRFAX is notable for its exceptionally fine quality and should be in every home garden and commercial planting. It is less reliable and not as productive as Catskill. In spite of

its dark color it commands a premium when its quality is known. CULVER is the best variety available for jam and preserving and a few should be included in the planting for this purpose. The berry is soft and requires careful handling.

If necessary to grow strawberries on land that is too wet for best results with standard varieties, ABERDEEN and PATHFINDER are suggested. Resistance to red stele, a root rot disease sometimes troublesome in wet spots, is the characteristic that makes these varieties useful in such situations.

After the strawberry plants are nicely started they may need a side dressing of 150 pounds per acre of nitrate of soda or sulphate of ammonia to stimulate runner formation. In fertile soils or where manure has been used freely this side dressing will not be needed.

WEED CONTROL. Cultivation and hoeing sufficient to keep down weeds and provide a loose soil for the runners to root should be practiced throughout the summer. Remove blossom clusters as soon (Turn to Page 11)

Contest for Gardeners

\$50 in Prize Money — Here Are
the Questions and Rules

THIS is the time to lay plans for planting the garden and putting in farm crops. Although snowbanks continue as the most important feature of the landscape, after a few warm March and April days they will disappear—at least they always have.

Have you been reading and using the information on crops and fertilizers that has appeared in recent issues of *American Agriculturist*? Let's see!!! And to make the game interesting, we are offering some cash prizes to those who send the best answers to the questions on this page. You will find information on all of these questions, except No. 15, in the last four issues of *American Agriculturist*. However, you are not limited to use of the information in the paper. You may get the answers to the questions any place you wish, but you must give page and issue of *American Agriculturist* in which each question was discussed.

Here are the questions:

- Where water for irrigation is not available, how can drought damage to the garden be kept to a minimum?
- If the general farm price level should rise, what effect is it likely to have on the competition from other areas which must be faced by northeastern fruit and crop growers?
- How does the distance at which potatoes are planted in the row affect yields?
- How can black knot in cherries and plums be controlled?
- Why does fertilizer give better results when placed reasonably close to the seed rather than broadcast over the entire field?
- What type of soil is best suited for growing alfalfa?
- As applied to vegetable growing, what is meant by the term "starter"?
- Is the American fertilizer supply menaced by the European War? What is the probable effect of a continued European War on farm prices?
- What method has been developed for stimulating plants to produce sudden changes which may result in new varieties?
- In what three ways can poor new seedlings be helped this spring?
- How does grazing management affect the varieties of grasses in a pasture?
- What recent development promises to lengthen the time apples can be kept in cold storage?
- In what advertisements in *A. A.* did the following terms appear:
 - Look for Uncle Sam on the Bag
 - Reliable Mail Order Seedsman Since 1880
 - 60th Anniversary Book of Bargains
 - Ask for Fertilizers Made With—
 - What Is New in Dormant Sprays?
 - Take Advantage of Our Knowledge of Farm Seeds
 - Proved Dependability
 - What About Pulling Power?
 - Our Plants Are All True to Name
 - New Varieties of Outstanding Merit
 - To Improve Yield and Quality, Feed Your Crops With—

Rules and Prizes

1. Entries in this contest must be postmarked not later than March 18. Address: Crop Contest Editor, *American Agriculturist*, P. O. Box 367, Ithaca, New York.

2. For all questions except No. 15, give page number and date of issue where question asked has been discussed in *American Agriculturist*.

3. The contest is open to any reader except employees of *American Agriculturist*, employees of state extension services, or teachers of vocational agriculture.

4. Write on one side of the page only.

The following prizes are offered by *American Agriculturist*:

1st Prize	\$20.00
2nd Prize	\$10.00
3rd Prize	\$ 5.00
15 Prizes of \$1.00 Each	

- What are the distinguishing characteristics of the following flowers:
 - Heavenly Blue Scabiosa
 - Rosalie Snapdragon
 - Rose Pink Sweet Pea

- In what ways are you planning to grow an unusually good home garden this spring?

Well, that's the story, so get out your pencil and paper, the four last copies of *American Agriculturist* and start now. Your chance of winning the first prize of \$20 is just as good as your neighbor's. Remember that your entry must be postmarked not later than March 18. Good luck to you all, and may the best man, or woman, win!

Deeper Tile Drainage Better

In soils other than tight clay, deep rather than shallow tile systems give the most effective drainage. In addition the tile are better protected against breakage from heavy tractors, from clogging with alfalfa and other roots, and from damage by frost when partly filled with water.

Tile outlets also need protection from frost, since tile containing much moisture will flake off when exposed to hard freezing. A good concrete headwall with an extra covering of earth will help greatly to protect the tile, and a few lengths of glazed sewer tile may also be worth while.

"Be quiet, Helen. Who's driving this car—you or your mother?"

Don't Let Your Accident

Insurance Policy Run Out

CHARLES M. GARDNER

Editor of the National Grange
Monthly and High Priest of De-
meter of the National Grange.

AMONG THE significant actions taken by the National Grange at the Peoria session was the decision to establish a permanent Grange marker for farm homes, encouraging members of this fraternity everywhere to purchase and display one of the new emblems. Carrying out this action, the executive committee of the National Grange has opened up a competition for emblem designs, and offers a cash prize of \$25 for the one finally adopted. As soon as this vote can be carried out the emblems will be available and it is expected that thousands of them will be displayed on farm homes throughout the nation.

* * *

STATE MASTER F. Ardine Richardson of Maine, the new Chaplain of the National Grange, makes a great travel record every year as he journeys over the Pine Tree State, visiting and addressing Granges in all counties. He established a new installation record during the first two weeks in January, when he and Mrs. Richardson inducted into office the 1940 leaders in 23 different Granges. In order to meet all these dates they traveled nearly 2,000 miles by automobile.

* * *

PENNSYLVANIA GRANGERS are very proud of the fact that one of the ten awards at the big Farm Show at Harrisburg to Master-Farmers of the Keystone State went to J. A. Boak of New Castle, former Master of the Pennsylvania State Grange. Mr. Boak occupies a century-old farm settled by one of his ancestors, and his agricultural activities constitute a model of good management. Pure-bred Jerseys, pure-bred Chester White hogs, Shropshire sheep and White Rock poultry are the special features of the Boak farm and on it is located one of the most comfortable and fully-equipped rural homes to be found in Pennsylvania.

* * *

NEW HAMPSHIRE GRANGERS are eagerly looking forward to the eighth annual School for Grange Lecturers, to be held at the University of New Hampshire, April 3 and 4. An increasing attendance every year has attested the value of such a meeting and the hearty cooperation of the University has made it an occasion of both instruction and pleasure. State Lecturer Charles R. Eastman is arranging all the details for this coming event.

* * *

A NEW GRANGE in Massachusetts is Fore River, located just outside the historic town of Plymouth. Although it was not instituted until late autumn of last year, it has already grasped the principles of service for which the Grange is widely known. Recently Fore River Grange sponsored a benefit dance, with entire proceeds for the Finnish Relief Fund. The high school auditorium of the community was crowded with dancers and spectators and as a result a Grange check for \$90.40 was turned over to the Finnish relief committee of that vicinity.

* * *

EVERYWHERE known as the oldest Grange member in the world is Charles H. George of South Paris, Maine, who will be 106 years old next September. He has recently been very ill, but great joy is widely felt in the fact that he is steadily recovering and

his return to complete health is confidently expected. Mr. George's nearest rival in age among the Grange members of the country is Jay Levi Terry of Chautauqua County, New York, who is 102 years old and still in excellent health. He lives with his son on a farm.

* * *

IN CONNECTICUT the Home Economics committees of all the Granges have set up as their 1940 principal project the raising of \$500 to provide two scholarships for Grange young people at the Connecticut State College at Storrs. These will be offered to one boy and one girl, members of the Grange, who meet the specified requirements to win the scholarships.

* * *

A NEW GRANGE HALL will very shortly be added to the list in Rhode

Island. The home of Chepachet Grange is rapidly moving toward completion and will be dedicated in the early spring. Not only is Chepachet one of the liveliest subordinates in Rhode Island, but it is the home Grange of former State Master J. Curtis Hopkins and of the present State Chaplain, Rev. Elden G. Bucklin.

* * *

ONE OF the most prominent Grange figures in the Northeast has been removed in the sudden death of Mrs. Ethel J. Hammond of New Hampshire, wife of former State Master and present State Secretary, John A. Hammond. The end came very suddenly in the midst of apparent good health, while Mrs. Hammond was sitting at the breakfast table, and the news was a great shock to a wide circle of New Hampshire acquaintances. For several

years Mrs. Hammond headed the Home Economics Department of the National Grange and her initiative led the way toward the accomplishment of many worth while projects.

* * *

TWO OF THE OLDEST Grange members in Steuben County, New York, have just celebrated their 60th wedding anniversary, Mr. and Mrs. Albert Graves, members of Ingleside Grange, No. 426, in which their membership has covered 56 continuous years, both being recipients of Golden Sheaf certificates issued by the National Grange. Mr. Graves has held nearly all the offices in the home subordinate, including that of treasurer for 16 years, while Mrs. Graves has likewise held many official positions. Both are still very active and regular in their attendance at Grange meetings.

Put your money in the car that's

BIG IN MORE THAN SIZE!

Try a new Ford yourself! Not only in actual measurements, but in looks and feel and ride and action, you'll find it bigger money's worth than you ever thought low price would buy!

BIG IN MEASUREMENTS!

Longer and roomier than any Ford car has ever been. Up to 4 inches more leg-room in sedans. More seatroom, elbow-room, luggage space too. And not just big... but big where bigness counts!

BIG IN RIDE!

Springbase in a Ford is longer than in any other low-priced car. In addition, longer, softer springs (on 85 h.p. models) and improved, self-sealing shock absorbers give a soft but steady big-car ride that's one of 1940's big surprises!

BIG IN "FEEL"!

Gears shift easily and quietly, with fingertip gearshift on steering post. Brakes are the biggest hydraulics ever used on a low-priced car. You enjoy the easy action of a semi-centrifugal clutch, and the fine-car advantages of full Torque-Tube Drive and free action on all 4 wheels.

BIG IN ACTION!

Learn for yourself what a difference 8 cylinders make... why they are used so extensively in the more costly cars. Own a Ford and you enjoy 8-cylinder performance... at low operating cost.

FORD V-8 A GREAT FARM CAR

Farmer-Labor Troubles in New Jersey

MR. KIRBY, our New Jersey editor, reports in the New Jersey issue this time the temporary settlement of farmer-labor troubles in New Jersey and around the Philadelphia market.

Trouble started when the American Federation of Labor tried to organize farmers, and in particular, to control farmer-owned trucks. At Philadelphia labor troubles resulted in the wrecking of a farm truck and in other damage. In Gloucester County, New Jersey, farmers were ordered to join a union and pay \$36 a year dues — or else!

Representatives of the A. F. of L., meeting with David Agans, Master of the New Jersey State Grange, and Harry Taylor, Secretary of the New Jersey Farm Bureau Federation, and other farm representatives, have come to an agreement whereby labor agrees to leave trucks alone that are strictly farmer-owned and operated.

But I am not as hopeful as is Mr. Kirby that this will settle all the New Jersey, or other eastern farmers' labor troubles. I don't question the sincerity of the leaders of the A. F. of L. They are much more constructive anyway than are the C. I. O. leaders. But all of organized labor is just itching to get its tentacles upon agriculture, and it will eventually succeed in doing so unless the farmers are eternally vigilant. Moreover, the C. I. O. is not included in this agreement, and they can be depended upon to edge in when they see the slightest opening.

For years, farmers trying to deliver perishable products into the New York, New Jersey, and Philadelphia markets, have been afflicted with labor racketeers who have made one demand after another upon farmers, including insistence that the farmers' trucks must be unloaded into those owned by city truckmen before final deliveries can be made to the stores. City officials, like Mayor LaGuardia of New York City, whine about the high price paid by consumers, and then stand by and do nothing to prevent the racketeers from adding to those prices and to the already over-whelming burdens of farmers by unfair and unreasonable demands.

What the Northeast needs is an organization like the Associated Farmers of California. Harassed and troubled by C. I. O. and Communist labor leaders, the farmers of California organized, secured the cooperation of local sheriffs, and succeeded in forcing the labor racketeers to leave agriculture alone. It looks now as if, having failed on the Pacific Coast, the gang has decided to come East. There was evidence of this last summer in the milk troubles we had here. There is plenty and constant evidence of it in the marketing situation around New York. It will continue until farmers cooperate to resist it.

Bang's Disease Controlled

DELAWARE County Farm Bureau News reports that Mr. T. A. Archibald of Franklin, New York, in 1936 vaccinated calves between five and eight months of age in his herd of 26 with strain No. 19. In each case blood tests showed a positive reaction immediately after vaccination, but a gradual return to the inactive side. Of the 26 vaccinates, 11 have freshened. Of these 11, 8 have freshened once, 2 have freshened twice, and one has freshened three times. Freshening has been normal in every case, and all these vaccinated animals have shown a negative reaction to the test.

This is only one case, of course, but gradually

there is building up a body of experience, all of which seems to indicate that Bang's Disease can be controlled by calfhood vaccination when done in the proper way and at the proper time.

Pennsylvania Has New Dean of Agriculture

CONGRATULATIONS are due both to the farmers of Pennsylvania and to Dr. S. W. Fletcher, for his appointment as new Dean of Agriculture at the Pennsylvania State College.

Dr. Fletcher is first of all a horticulturist. But his long farm, teaching, and research experience fully qualify him as the dean of a great college.

A Plea for Simplified Language

RESearch scientists are probably doing more than any one else to advance the right kind of help for farmers both along production and marketing lines. But scientific progress would be faster if the scientists would stop trying to be highbrow, particularly in the use of names.

Since a small boy I have always resented the use of unpronounceable names of purebred cattle, and I know that that feeling is shared by thousands of others. Why spend time trying to remember the names of an important family of cows when the same time can be so much more profitably spent in the study of the characteristics of the same cows!

Before me as I write this is an article written by a scientist on spraying. He talks about "two new organic contact insecticides, di-nitro-ortho-cyclo-phenol and ortho-dinitro-cresol;" he mentions cryolite and bentonite. The language in which he describes these incomprehensible names is stilted, and filled with long adjectives.

Here is an honest plea to the farmers' best friends, the research scientists, and the agricultural teachers, to talk Abraham Lincoln's United States language!

The "Spring Light"

LAST night it was still light at six o'clock when we sat down to supper. Over in the Western sky there was that golden "spring light", a sure promise of warm, busy and better days.

Got your new garden and seed catalogs? Better get busy!

Rural Poetry Is the Best

CAROLINE B. SHERMAN, of the United States Department of Agriculture, said recently that "poetry of rural America is generally recognized as among the best poetry written in this country. Poetry that deals with farm themes and farm people is so close to truth that it inevitably serves the cause of beauty."

No one can sit long at an editorial desk without being impressed with the large number of people who are struggling to express themselves, especially through poetry. Our amateur poet's corner draws many thousands of poems in a year. Many of them are not up to publication standard, but some of them are first-class and all of them

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR FARM PRODUCTS.
3. LOWER FARM TAXES.
4. A GOOD LIVING FOR EVERY FARM FAMILY.
5. MORE FUN ON THE FARM.

Youngsters who have never owned a cosset lamb have missed something.

are worth while in helping human souls in their struggle for beauty and ideals.

Are We Growing Soft?

DID YOU read Mr. Frandsen's inspiring story on Page 1 in the last issue in which he gave fourteen suggestions for getting more "living" out of life?

I wondered as I re-read it if past generations of Americans could face their troubles and take them on the chin better than we do today?

Get Machinery Parts Now

IF THERE is anything that discourages and worries a farmer, it is to get into the field all set to go on a hurry-up job in the spring, only to find something the matter with his machinery.

To prevent this, go over each farm machine now, list the repairs or parts needed. Then take this list, together with the name of your machine, its size or model, and any possible number or description of the parts that you need, to your local dealer. He will get in touch with the manufacturer, order the part needed, and you will be ready to go when the time comes for the big spring rush. If you have an old machine and cannot find repair parts, drop a post card to our Service Bureau. In many cases we can tell you where you can get them.

Also, remember that a little paint on farm machinery helps a lot to brighten it up and to keep off the rust!

Eastman's Chestnut

AT OUR great Master Farmer and 4-A Banquet in Ithaca the other night, attended by more than 500 people, Alex Speirs brought down the house with a laugh on me. After Governor Lehman had read Mr. Speirs' splendid record as a Master Farmer, and presented him with the Master Farmer medal, Mr. Speirs replied with an appropriate little speech and concluded with a story which he said I had told at one time "in those things which he calls his chestnuts", and that I had "butchered" the story in telling it! Probably I did, and I'm sure it is not the first chestnut that I have murdered in the telling. Here's the way Mr. Speirs told it:

A salesman was attempting to sell a bicycle to a Scotch farmer. The farmer resisted the sales pressure, said that he was going to take his money and put it into a cow.

"That's foolish", said the salesman. "You'd look nice riding down the street on a cow!"

"Better than I would sitting down to try to milk a bicycle", retorted the farmer.

The Farm Garden . . .

Points to Home-Made Living

THERE are all kinds of gardens. To one person the word "garden" means wide stretches of green lawn bordered by shrubs and flowers, with a hired gardener to keep it a thing of beauty to the eye. To another it may mean a small flower garden filled with annuals, a sort of an old-fashioned flower garden. But when a farmer speaks of a garden, he refers to vegetables and small fruits.

The farm garden has been called the most neglected and the most unappreciated spot on the farm. Others, who have kept a record of the value of the products from the garden, refer to it as the most valuable crop and the one which gives greatest returns for the time and effort spent on it. Count us among the latter group.

The tables on this page will be of immense help to you in planning the best garden you have ever had. These tables are the result of much work by the Department of Vegetable Gardening and the College of Home Economics at Cornell. They will apply in general to any section in the Northeast.

The ideal farm garden is one which supplies something fresh for the farm table every day for the longest possible period, and in addition to that, supplies an abundance of products to be canned and stored for winter use.

The harvest season for various crops can be extended in two ways—either by planting seed of such crops as carrots, beets and lettuce at several intervals, or by putting in seed of early, mid-season and late varieties at the same time. This is especially effective with sweet corn. Because the time required to mature varies with different varieties, one planting will provide a long period of use.

No one can enjoy such excellent vegetable quality as can the home gardener. Quality depends, first, on choosing the best varieties. That does not necessarily mean the best varieties for market because some of our vegetables and fruits with the best flavor do not stand shipment. The

VEGETABLES						
Vegetables* (Two servings daily besides potatoes)	Number of servings weekly†	For a family of five (two adults and three children)		Seed or plants for garden to supply a family of five	Recommended varieties**	
		Length of row to plant for 12 months‡	Vegetables for eight unproductive months Quantity to store Quantity canned, brined, or dried			
Dandelion greens Beet greens Spinach (spring and fall) Spinach, New Zealand Chard Broccoli§ Kale	Select one from this group	Obtained from lawn and meadows Supplied by thinning beets (see beets) 100 to 150 feet 25 to 40 feet 25 to 40 feet 50 to 75 feet 20 to 40 feet	 25 quarts	1½ ounces ¼ ounce ¼ ounce Packet (36 plants) Packet	Long Standing Bloomsdale, King of Denmark, Virginia Savoy (fall) New Zealand Lucullus Italian Green Sprouting Dwarf Green Curled	
Lettuce (leaf) Cabbage§, early Cabbage§, late Cucumbers Peppers§	Select three (Use raw one or two times a week)	2 plantings, 25 to 40 feet each 50 to 100 feet 100 to 150 feet 50 to 100 feet 25 to 50 feet	150 pounds—part may be made into kraut	Packet Packet ½ ounce Packet	Grand Rapids, Prize Head, Black Seeded Simpson Golden Acre (E), Copenhagen Market (M) Danish Ballhead (L) Early Fortune, White Spine, A & C Harris Earliest, King of the North, World Beater	
Tomatoes§	3 or 4 for adults 7 for children	200 to 300 feet		36 quarts§ 90 quarts¶	Packet 60 to 100 plants	Earliana (E), Bonny Best, John Baer, Marglobe (L)
Green peas Snap beans (green) Snap beans (wax) Lima beans Sweet corn	Select 3 or 4 from this group	2 or more varieties, plantings 75 to 125 feet each 75 to 125 feet 2 or more varieties, plantings 100 to 150 feet each	45 quarts total 25 quarts	1 pound ea. ½ pound ea. ½ pound ea. ½ pound ea. 2 ounces each	Mammoth Pod Extra Early (E), Little Marvel, Thomas Laxton, Alderman (L) Tendergreen, Bountiful, Black Valentine Pencil Pod, Round Pod Kidney Wax, Sure Crop Fordhook, Henderson (E), Leviathan (Pole) Early: Seneca 60, Cockerow, Whipples Early Midseason: Extra Early Bantam, Seneca Golden, Golden Bantam Late: Golden Cross, Stowells Evergreen	
Carrots Onions	Use raw often	200 to 300 feet 125 to 200 feet	100 pounds 100 pounds	1 ounce 3 pounds sets ½ ounce	Red Core Chantenay, Danvers Half Long, Nantes Yellow Globe Danvers, Ebenezer, Silver Skin Purple Top White Globe, White Egg	
Turnips Rutabagas Beets (spring and fall) Parsnips Squash, summer Squash, winter	Select 4 or 5 from this group	100 to 150 feet 100 to 150 feet 125 to 200 feet 50 to 75 feet 10 to 15 hills 100 to 150 feet	Choice—total 200 pounds 100 pounds 50 pounds	¼ ounce 2 ounces ¼ ounce Packet 1 ounce	American Purple Top, Early Neckless Crossbys Egyptian, Detroit Dark Red Hollow Crown, Model Yellow Straightneck, Italian Marrow Hubbard, Boston Marrow, Delicious, Table Queen	
Beans, dry Potatoes	1 7	400 to 500 feet 1,000 to 1,500 feet	50 pounds 12 bushels	2 pounds 1½ bushels	White Marrow, White Kidney, Cranberry Irish Cobbler (E), Smooth or Russet Rural, Green Mountain	

*Other vegetables that may be included in many gardens are: asparagus, Brussels sprouts, cauliflower, celery, Chinese cabbage, endive, eggplant, kohlrabi, muskmelon, parsley, popcorn, pumpkin, radish, rhubarb, salsify, and watermelon.

†Vegetable servings:
1 pound of greens or cabbage = 4 servings.
1 pound of other vegetables = 2 servings.
1 quart of canned vegetables = 8 servings.

(This size serving is for adults. Children under 6 years of age will take somewhat smaller servings and some adults may take larger servings, thus making the amounts used here a fair average.)

‡During the summer months, use fresh vegetables and fruits solely, if possible. When this is not possible, plan to increase the amounts of dried and canned ones.

§Plants set in garden grown from seed planted 6 to 10 weeks earlier.

¶Oranges or grapefruits may be substituted for part of these quantities.

** (E) Early or short-season variety. (M) Midseason. (L) Late or long-season variety.

FRUITS						
Fruit*	Number of servings Weekly†	For a family of five (two adults and three children)	Fruit for 8 unproductive months		Recommended varieties	
		Suggested number of plants, vines, or trees to set for 12 months	Quantity to store	Quantity canned or dried		
Rhubarb	3 to 4	15 to 20 roots, 3 feet apart in row	}	60 quarts	Limaus or Strawberry, Victoria	
Strawberries	3 to 4	200 plants, 2 feet apart in row				
Red raspberries	3 to 4	20 plants, 3 feet apart in row				
Black raspberries	2 to 3	20 plants, 3 feet apart in row			30 quarts	Howard (Premier) Fairfax
Blackberries	2 to 3	20 plants, 3 feet apart in row				Newburgh, Latham
Grapes	As desired	5 plants, 8 feet apart in row			As desired	Bristol, Plum Farmer
Currants	For jelly	5 plants, 3 feet apart in row			As desired	Eldorado
Apples	4 to 6	6 trees, set 40 feet apart each way		60 bushels		Portland, Fredonia, Niagara, Concord
Peaches‡	2 to 3	4 trees, set 20 feet apart each way		60 quarts	Wildier, Red Lake	
Pears§	2 to 3	2 trees, set 20 feet apart each way		60 quarts	1 Early McIntosh, 2 McIntosh, 1 Delicious, 2 North- orn Spy	
Plums	1 to 2	3 trees, set 20 feet apart each way		30 quarts	Oriole, Halehaven, Elberta	
Cherries	1 to 2	2 trees, set 20 feet apart each way		30 quarts	Tyson, Bartlett, Seckel	
					Italian Prune (Fellenberg), Stanley	
					Early Richmond, Montmorency, English Morello	

* Two servings daily of some kind of fruit; a choice to be made of small fruits and tree fruits to suit family preference.

† Fruit servings:
1 quart canned fruit = 6 servings
1 apple = 1 serving.

‡ In season, surplus to be canned, stored, or the like.

§ Not hardy except near Great Lakes, Finger Lakes, or Hudson River.

¶ Very susceptible to fire blight, for which there is no satisfactory control.

second essential for flavor and tenderness is to grow the crops rapidly. Weeds, of course, must be controlled, and assuming that is done, the next point to remember is that abundant fertility makes for rapid growth. The garden is no place to be saving in the use of enrichment, either farm manure, or lacking that, commercial fertilizer.

And finally, here is a word directed to the men. When the good wife wants the garden plowed, don't tell her that it is time to put in some farm crop and that you will do it next week. Do it when she asks you and you will accomplish two purposes. You will please her (and what man would say that is unimportant?) and you will be making more money than you can on any other crop on the farm. When you grow a garden, you are not taking wholesale prices for things you grow. We hear a lot about the long road between the consumer and the producer, but that road is a short road when you step out into the garden, do a little harvesting, and consume your product that day at your own table.

"Then Plant a Green Garden"

Plan to Include Some of These Improved Perennials

By
MRS. GRACE WATKINS HUCKETT

The new giant pansies (left) are unbelievably rich in color.

Garden Peace

By Roberta Symmes.

Dear friend, are you burdened
With trouble and care?
Are you weighted with weariness
Doubt and despair?
Then plant a green garden,
Sweet, dewy and fair,
And Peace, like a dove,
Will descend on you there.

Dear friend, is it healing
And balm you would know?
Then watch beauty blossom
From seeds that you sow.
If it's calmness, contentment
And peace you would find,
Seek those in a garden —
A garden is kind!

bronze shaded to gold, is 2 ft. high and opens October 10th.

Chrysanthemum Acacia has delightfully fragrant small sulphur-yellow blossoms, slightly over 1 inch across, and is said to resist frost to a remarkable degree. Autumn Lights shows masses of coppery bronze, semi-double blossoms 2 inches or more across, has healthy dark green foliage and is unusually hardy.

Any reference to new developments in chrysanthemums should include the cushion group. The old one, known variously as Amelia, Azaleamum, and Pink Cushion, is now supplemented by red, yellow, bronze and white in this low-growing, free-flowering family. Amelia comes into bloom in late July.

Those of us who like fuchsia as pot plants are pleased to know that fuchsia Scarlet Beauty is a new, hardy variety, a descendant of the older hardy variety fuchsia Magellanica. It may need some winter protection north of Philadelphia. While it will

stand full sunlight, it reaches perfection in semi-shade. Sepals are deep purple, the corolla a bright ruby red.

The shrub-like buddleia is appearing in new and delightful colors. "Charming" has lavender-pink sprays, Dubonnet a deep wine; Orchid Beauty has soft orchid-lilac blooms. Other varieties of buddleia introduced in recent years are Ile de France, a deep purple, and Fortune, pure lilac with a brilliant orange eye.

Perennial baby's breath, gypsophila, now appears in double forms, much superior to the old familiar single. Bristol Fairy is the reliable double white. Repens Bodgerii is (Turn to Page 10)

PERENNIALS, the backbone of any garden, are learning new tricks. Even the best of the old favorites are being improved by the hybridizer's art.

Anthemis, the golden marguerite, has had some of its bad habits corrected, the new form Moonlight now being less sprawly and more compact than the old forms. Since the blossoms are a soft yellow and about 2½" in diameter, it is an excellent companion for delphiniums. Anthemis is easy of cultivation, thriving even in poor sandy soil.

The little rock garden plant arabis, or rock cress, in its common form is white. Of the colored forms, Spring Charm is a new carmine-rose. Other fairly new rock garden plants are Campanula carpatica hybrids, with crinkly heart-shaped leaves and small, attractive saucer-like blue or white flowers blooming in mid-summer. A very early blooming plant is doronicum or leopard's-bane. The variety Bunch of Gold is well branched, with good-sized bright yellow flowers.

The Polyanthus form of primrose, when planted in slight shade, makes an excellent rock garden subject. Either buy new varieties of blooming potted plants in order to get the desired color or take a chance on color and grow them from seed.

No garden would be complete without violas, violets and pansies. Viola Arkwright Ruby is a beautiful dark red—when it comes true from seed. Yellow Queen is another new color. Violet Rosina, a new pink violet, is exquisitely sweet and blooms very early in the spring and again in the fall. The newer pansies, Swiss giants or some of their hybrids, have the most amazing range of colors and are much larger than the old forms. Although it is possible to start them under heat now and have them bloom for late spring, the sturdier plants are started in the fall, given slight winter protection and are all set to bloom with the first warm weather.

There are many rock garden forms of columbine—blue, white, purple and red. Probably the columbines or aquilegias commanding the most public attention at present are the showier ones, large-flowered and long-spurred. The yellow Longissima was introduced a few years ago and now it has been crossed with another noted strain, the Mrs. Scott Elliott hybrids. These are sold as Aquilegia Longissima hybrids. The red columbine Crimson Star holds

its own in public favor, because of its arresting color and form. The clematis-flowered columbines with no spurs are now available in a variety of pastel colors. Other famous strains of columbine are the Waller Franklin and the Dobbie's Imperial.

Another family having both low growing and tall forms is the hardy aster family. It is important to know which are tall and which are low growing in order to use them successfully—as I know from experience. Blooming period is equally important. They may be had in the blue shades, pink and white. A yellow form is Luteus, interesting as to color but flowers are not so attractive as aster Frikarti, Wonder of Staefa, with its large lavender-blue flowers. Beechwood Challenger is a red form.

Chrysanthemums, through the work of hybridizers, have been developed to bloom earlier and to withstand bitter cold, besides furnishing a wider range of colors and forms. The hardiest are crossed with arctic daisies, an outstanding result being Astrid, with single daisy-like flowers of old rose shaded with apricot. Another daisy-like chrysanthemum is Clara Curtis, perfectly hardy and beginning to bloom early in August. The Korean hybrids are available in singles and doubles and even in pompoms. Pygmy Gold, intense yellow, is one of the new Korean pompoms. Other new pompoms are Gleam o'Gold, primrose yellow in color, and diminutive Pomponette shading from warm bronze to clear yellow. Goblin, Korean in its ancestry, is a warm

Old Apple Trees Must Go

By ED MITCHELL

I'VE GOT a big open fireplace in my house that was built about 150 years ago, before stoves were invented. All day and most of the night we keep a big apple log burning there, and everyone comes around periodically to get toasted, and draw a little comfort from that open fire.

Frequently I recognize the log as part of a well known and loved tree that I have been nurturing for the last thirty years and my predecessor nurtured a long time before I came. Cutting down a good, old, faithful apple tree is almost as hard for me as to knock an old faithful horse in the head. That is one reason I guess, why my farm costs and income refuse to balance; I am spending too much on sentiment.

I use that word sentiment as an alibi. In fact I know I am just bull-headed and in a rut, and find it painful to change my ways.

I have known for a long time that Ben Davis; Pomeroy; King; and a lot of other varieties do not and never will show me a profit. The old Baldwins and Greenings are shot with winter injury and disease and can hardly support life for themselves, let alone for me, and the time has come for us to part. Either they or my apple business must go up in smoke, and so we are having plenty of wood to burn.

It looks to me as though we might make a small profit on first quality packs of good varieties these next few years, and eventually develop by-product outlets to put a more substantial bottom under the apple market; but it also looks as though production costs

When we do make mistakes in planting varieties, top-working is one way to correct the error.

were going to be high which means we can only afford to spend time and money on young, low trees of the better varieties.

I can't bring myself to cut down the old trees because I hate to squat down and push a cross cut saw almost as much as I hate to sink an axe in the old trees that have done their best for me, so I send the hired man out to do the butchering, and I turn the other way and shape up and nurse along the young trees that are to take their place.

An old neighbor of mine told me twenty years ago that an apple orchard ought to be put in a rotation just like crops, and be replaced about every twenty-five or thirty years. It has taken me almost that long to get around to his point of view, but I think I agree with him.

After about that long, an apple
(Continued on Page 11)

Experiences With Chippewas

By FORD S. PRINCE

New Hampshire College of Agriculture.

ONE OF the new potato varieties that has achieved prominence during the past few years is the Chippewa. This beautiful, white-skinned variety is the housewife's delight because of its looks and its lack of eyes.

In spite of its superior marketability, it has some faults which the grower should remember. The lack of eyes causes it to be susceptible to poor stands unless careful seed cutting is practiced. Mechanical seed cutters should not be used for it is necessary in cutting to scan each potato to make certain each seed piece will have one or two eyes and thus prevent skip in the stand.

Trials in New Hampshire proved that this variety is more susceptible to fertilizer variations than either Irish Cobblers or Green Mountains, two of the old favorites. The Chippewa has proved to be particularly sensitive to phosphorus variations, yields falling unduly with a lack and rising more than yields of other varieties with an increase in phosphorus. This means careful attention to fertilization and particularly so with phosphoric acid.

Fortunately an excess of phosphorous influences favorably the cooking quality of Chippewas. Tests in New Hampshire in 1938 seemed to prove that an excess of phosphoric acid during the growing season raised the specific gravity and increased the starch content of the tubers grown, having more effect on these factors than any other fertilizer element. Since the Chippewa is at best a waxy and not a mealy potato, the excess phos-

phoric acid by making the potatoes more mealy is a boon to its cooking quality.

Although resistant to mosaic, Chippewa appears to be very susceptible to leaf roll. Growers outside of the certified seed area who planted their home grown stock in 1939 were severely disappointed at harvest time with yields of from one-third to one-half of normal. The plants were 100% infected with leaf roll. This condition may have been due to attacks of aphids in 1938 which spread the disease from infected to healthy plants, causing them all to become diseased in 1939. At any rate, until the variety proves that it will stand up against leaf roll, growers will be forced to use certified seed.

In 1938 our tests in New Hampshire showed that Chippewas outyielded Green Mountains by about 50 bushels per acre as the result of eight trials. In 1939 this trend was more than reversed with Green Mountains running ahead. The difference lay in the adverse season of 1939. In one of New England's worst drought years the earlier maturing Chippewas "went down" and failed to come back later, while the Green Mountains survived the drought and heat and matured a good crop in most instances. A few late planted fields of Chippewas came through with good yields, but early plantings were severely hurt.

The Chippewa promises to be quite a useful potato variety. But the grower should understand that it is somewhat more fragile than the old favorites and treat it accordingly.

In choosing your fertilizer, remember that urea nitrogen gives you two valuable properties:

1 - COMPLETE AVAILABILITY 100%

Urea nitrogen goes to work quickly and keeps working steadily, meeting the needs of both early and late planted crops.

2 - RESISTANCE TO LEACHING

Plant food lost in drainage water is wasted. Urea nitrogen stays put in the soil. When your fertilizer contains urea, you can smile at the rain, knowing that most of your nitrogen will not wash out of the soil. So ask for fertilizer containing urea, a completely available leaching-resistant form of nitrogen.

Ask for fertilizers made with

UREA NITROGEN

"URAMON" Fertilizer Compound
Net. 11.5 Lbs. (52% Urea Nitrogen)

Urea-Ammonia Liquor
(45% Nitrogen)

POTATO RING-ROT

By R. J. HASKELL,

Senior Extension Plant Pathologist, U. S. D. of A.

IN JANUARY 1937 a serious, new potato disease was reported from one of our most important seed-producing States. Previously it had been observed by potato inspectors and others several years before. The following season it was found in several widely scattered parts of the country and in 1939 it was reported from 27 of the 48 States. In most of these States the disease did not seem to be very generally distributed but rather confined to certain seed lots and certain areas.

Ring-rot or bacterial ring-rot, as the disease is called, is a real threat to the potato industry. It causes both field and storage losses by blighting vines and rotting tubers. Growers of certified seed potatoes may be especially hard hit as most inspection services are rejecting all fields showing any of this disease whatsoever. Losses run all the way from a trace to 30 or 40

per cent in table-stock fields. In one county the loss was estimated at 500 to 700 cars plus a reduced price on several thousand cars. In at least one locality the potato industry has almost passed out on account of it.

How to Detect Ring-Rot

On the plants the symptoms usually appear late in the growing season shortly before digging time. The leaves lose their turgor, droop and feel soft and thin to the touch. They look as if they were suffering from lack of water. The green color fades from leaves and stems and the plant dies. Sometimes affected stems remain erect after leaves wilt. At other times and in other environments they fall over prostrate on the ground. Often only one stem of a plant appears affected.

On pulling up affected plants the root system appears sound. When cut,

the stems seem normal, there being no discoloration of tissues.

In the tubers as the name ring-rot implies there is often a discoloration of the vascular ring. The decay begins at the stolon end and has a tendency to follow the ring. It is a soft, creamy, slightly yellow or light brown decay. It sometimes occurs as pockets in the flesh of the tuber. In early stages a potato may be infected but not show visible symptoms. In late stages tubers show a brown rot outside and inside. The whole tuber eventually breaks down in a soft rot.

The rot develops in storage rapidly at 70° to 95° F. and slowly at 37° F. Infected potatoes shipped during the cold parts of the year do not break down as soon as those shipped in warm weather.

How it Spreads

Ring-rot is a bacterial disease. The bacteria are spread from place to place with the seed tubers and as seed potatoes are shipped widely that is the way the disease gets distributed. It increases rapidly in a given lot of seed. A trace or so may build up to 10 to

—Photo, Courtesy of Dept. of Plant Pathology, New York State College of Agriculture.

In advanced cases of ring rot secondary organisms invade the conducting tissues turning them dark and sometimes leaving cavities as the destroyed tissues dry up.

Illustration shows Farmall-A with 2-row direct-connected planter.

FARMALLS *Fit Your Farm!*

Now, genuine Farmall advantages are available to farmers with small acreages. The new Farmall-A—outstanding performer in the \$500 price class—brings you comfort and "Culti-Vision" in a compact tractor that does the work of four horses at the cost of two. Pick a Farmall-A and you'll get a winner for 1-plow, 1-row work. And, remember, there is the Farmall-B for 1-plow, 2-row work.

Check these facts for yourself. Ask the International Harvester dealer to let you drive one of these new Farmalls. Give it a whirl down the lane and back. You'll get a thrill out of its speed, zip, color, and comfort. You'll want a new Farmall, and you should. It's everything you need in a tractor. In addition to the two small "Culti-Vision" Farmalls, the line includes 2-plow Farmall-H and 3-plow Farmall-M.

INTERNATIONAL HARVESTER COMPANY (INCORPORATED)

180 North Michigan Avenue

Chicago, Illinois

THE *New* McCORMICK-DEERING FARMALLS

"Culti-Vision"

is more than a new term in tractor language. It is the name of a brand-new idea in small tractor design. It is an exclusive feature of Farmall-A and Farmall-B. In these snappy 1-plow tractors the upholstered seat, roomy platform, and convenient controls are offset to give you a perfectly clear view of your work. You can sit in your seat and see when you drive a "Culti-Vision" tractor. No bodytwisting, no neck craning!

Check these facts for yourself. Ask the International Harvester dealer to let you drive one of these new Farmalls.

"Lift-All"

lifts or lowers the entire implement at the flick of a finger on the handy control. But that is not all—"Lift-All" goes way beyond that! You can lift or lower front beams of cultivator first. Delayed action automatically actuates rear beams when they reach point where front beams were lifted or lowered. Or you can lift either side of the implement independently of the other side. You can lift and hold implement to any desired working depth. See this great new attachment for Farmall-H and Farmall-M. Ask the International Harvester dealer for a demonstration.

20 per cent the following year. It is highly infectious. The bacteria are spread from diseased to healthy potatoes by contact with hands, the cutting knife, the cutting bench, contaminated bags, baskets, crates, planters, diggers and graders, and in other similar ways.

Several experiments to see if the organism will live in the soil from year to year have thus far shown negative results.

There seems to be some evidence of spread from one plant to another during the growing season. In the West, under irrigation, field spread may be more important than in the East. At present we do not know of any insect that spreads it.

What Can Be Done

Since ring-rot is a seed-borne disease the most important step is to secure seed free from ring-rot. In certain localities it may not be easy to get such seed but there are many fields and seed-producing areas where the disease has not been found yet. Experience shows that farmers can rid their fields of ring-rot by substituting disease free for diseased seed lots and by observing sanitary precautions.

Growers of certified seed have a decided responsibility in cleaning up ring-rot, as it is on them that other growers depend. They are accepting that responsibility and making a determined effort to avoid and eliminate the disease.

Growers of table stock should use certified seed. Although the disease may have crept into certain lots, certified seed is very much more likely to be free than is non-certified. Purchasers should insist on seed free from ring-rot and should examine tubers when received. If the disease is found circumstances will govern the action that should be taken. It would be best not to use them for seed but rather for eating. If it is decided to take a chance and plant slightly infected seed the following sanitary precautions will help:

1. When cutting, disinfecting the cutting knife and cutting board frequently will help cut down spread. Use corrosive sublimate (1-1000) or a strong solution of formaldehyde (2½ tablespoons to 1 gallon of water). Keep several knives standing in a jar of this solution.

2. Disinfect seed, using any of the regular treatments. Giving the seed one of the organic mercury dip treatments after they have been cut would appear to be warranted. Cut seed should be carefully dried and stored **af-**

(Continued on Page 22)

Milk Production Control from the National Viewpoint

By LELAND SPENCER

IN A RECENT speech at Burlington, Vermont, Mr. R. M. Evans, Administrator of the A. A. A., made what I think is the first public statement for several years by a national official on the subject of production control of milk. While Mr. Evans did not commit the Administration to any line of

Leland Spencer

action, he left the door wide open to suggestions or demands by the dairy interests. "There is talk in some dairy areas including the Northeast," he said, "... that some form of production control is needed by the dairy industry. The Agricultural Adjustment Administration has taken no official position on this matter. My own reaction to this is that the dairymen are the men best qualified to determine whether any such program is necessary or advisable. However, in considering the advisability of such a program, several things need to be taken into account. Such a program would be complicated and difficult to operate. Of nearly five million farms keeping milk cows, nearly three million sell milk in some form, producing and marketing it under a variety of conditions. Serious problems would be involved in obtaining adequate data for individual farms and in establishing and administering equitable allotments and quotas."

Mr. Evans' statement of the difficulties that would be met in attempting a national production control plan for milk shows that the problem is getting more careful consideration than it did when the A. A. A. proposed such a plan in 1934. The essentials of that proposal, as outlined at the time, were as follows:

1. Individual quotas were to be set for all dairymen throughout the United States.
2. The quotas were to be based on each farmer's sales of milk or butterfat during 1932 and 1933.
3. The farmers were to be invited to contract with the Secretary of Agriculture to reduce their output of milk or butterfat between 10 and 20 per cent below their bases. Those entering into such contracts became eligible for benefit payments.
4. The Government was to make benefit payments to contracting farm-

ers at the rate of 40 cents a pound of butterfat or about \$1.50 for each hundred pounds of milk by which the farmer's production was reduced, within the prescribed limits.

5. A processing tax of 1 cent a pound of butterfat (later up to 5 cents a pound) was to be levied to build up the funds required for the benefit payments.

This plan was discussed at several regional meetings throughout the country. One of these meetings was held at Syracuse, New York, in April 1934. The reaction of dairymen was so unfavorable that the plan was dropped, and no further steps toward production control of milk have been taken by the A. A. A. since that time.

The plan proposed in 1934 was impractical for several reasons. In the first place, it would have been impossible to determine or verify the quotas for more than a million farmers who sell small quantities of cream to the thousands of cream stations and centralizer creameries in the western states. These farmers frequently shift from one market to another. It would be equally difficult to check the cream sales of these farmers to determine whether they had made the reductions called for in their contracts.

Another weak spot in the 1934 plan for production control was the fact that benefit payments were to be at the same rate to all participants regardless of differences in the market value of milk or butterfat. The producer of market milk in Rhode Island was to get only 40 cents a pound of butterfat for reducing his output which had a market value of perhaps 50 or 60 cents a pound. The cream producer in Nebraska or Texas also was to get 40 cents a pound for reducing his sales of butterfat with a market value of 25 to 30 cents a pound.

If milk production is to be controlled on a national basis, some plan that is more workable and more fair to the producers of market milk will have to be devised.

Clean Milk Cans

THE manner in which milk cans are washed has a definite effect on the bacteria content of milk. Usual recommendations are that they should be washed immediately after use by first rinsing with cold or lukewarm water, and then washing with hot water containing a milk alkaline, but no soap, and a good stiff brush to get in all of the corners. Then scald the cans or steam them if possible, and invert them on a clean rack to dry. Rinsing with a chlorine solution, used according to manufacturer's directions, helps to reduce the number of bacteria.

In order to see just what effect drying cans has on bacteria, the Bureau of Dairy Industry made several tests. For example, the bacteriological test showed that one freshly washed can contained 5,000 bacteria. Twenty-four hours later the can, which had been kept dry, contained 9,000; while a can with a similar number of bacteria when freshly washed, but kept wet for twenty-four hours, contained 110,000-000 bacteria.

In common, every-day terms, filling the dry can with milk would have added to the fluid milk less than 1 bacterium to a cubic centimeter, but filling the wet can, containing the 110,000-000 bacteria, would have added over 6,000 bacteria to every cubic centimeter of milk. That seems proof enough that it is advisable to dry milk cans immediately after they are washed.

FAST MILKING DOES GET MORE MILK!

and **Surge**

IS THE FASTEST MILKER EVER BUILT!

SURGE MILK TRAVELS ONLY 4 INCHES INSTEAD OF 4 FEET FROM TEAT TO PAIL. JUST 4 PIECES OF RUBBER TO WASH

Authorities agree that faster milking DOES get more milk—and Surge is the fastest milker ever built! NO claws. Surge uses rust-proof, easiest-to-clean STAINLESS STEEL in every metal part touching milk. Surge's exclusive Adjustable, Variable Pull feature enables you to do a faster, cleaner, more profitable job with less labor. Sold on Easy Terms.

NEW Surge MILK COOLER

"Shrouded Air Current"

Surge SHROUDED Milk Cooling Unit—Complete with Steel Cabinet

Surge's proved superiority has come about through an exclusive new cooling principle... SHROUDED AIR CURRENT which puts every bit of air to work cooling the entire condenser and greatly increasing the efficiency (explained in our catalog). BIG ICE RESERVE keeps the cooling water ice-cold and seals the milk faster. FACTORY SEALED COMPRESSOR UNIT comes to you ready to run. Does not require a refrigeration engineer... Factory adjusted for maximum efficiency and can be installed in Factory-Made Steel insulated tank or your own insulated concrete tank. Sizes: 2 to 30 can capacity. Learn how easy it is for you to own and operate one. Mail coupon!

Say you saw it in AMERICAN AGRICULTURIST.

"He's getting warm, isn't he, Mama?"

MOST vegetables require more potash than any other plant food. Many of them remove from the soil more potash than nitrogen and phosphoric acid combined. If your soils become low in any of these plant foods, yields will suffer. Low potash, in addition, makes the plants more susceptible to diseases and early frosts, and greatly reduces quality.

For best results on mineral soils apply at least 100 lbs. K_2O (actual potash) per acre. On peat and muck soils use double this amount. The most economical way to apply the above amounts is to use fertilizers containing 10% or more of potash. Analyses such as 5-10-10 for mineral soils and 0-12-18 or 3-12-18 for muck soils are officially recommended and widely used.

Consult your county agent or experiment station on how much potash your soil will supply. Then make sure that your dealer sells you a fertilizer containing enough to supply what you need.

Write us for further information and free literature on fertilizing your crops.

The Best Seed is the BEST BUY

By M. T. MUNN,

Seed Analyst, Geneva Experiment Station.

WITH SEED prices fairly reasonable and stocks of the better grades adequate, there is no apparent reason why farmers, this spring, cannot plant the crops they desire. One of the most notable and valuable advances in seed production during the past few years is the production of certified seed. It is, without doubt, one of the most valuable advances in real seed insurance that has ever come to the aid of agriculture.

Certified seed is produced under a definite and dependable controlled plan by which it is possible to assure the buyer that he is getting exactly what he has ordered. Very few other sources of seed can offer its equivalent. In the first place, a grower or farmer who wishes to produce certified seed must make the necessary arrangements to do so and start with fully approved foundation stock.

The crop is planted in a location that will prevent its becoming crossed or mixed with other varieties. The growing crop is carefully inspected by competent experts one or two times during the growing season to make certain that it is being grown under the proper conditions, of the correct variety, and practically free from seed-borne diseases.

Finally, the seed crop is harvested, threshed with proper precaution to prevent admixture with other varieties, and then cleaned and tested for mechanical purity and germination to be certain that it meets the rigid standards set for certified seed of that particular crop. If it meets the certification standards in every respect, a tag bearing the grower's number is issued to be placed on each bag. Thus it is that farmers are coming to recognize the great advantages of certified seed and are finding that it pays exceedingly well to secure that kind of seed. This is particularly true of those crops where trueness to variety is all important, and, as in the case of potatoes, where freedom from seed-borne diseases is very essential.

Hybrid Corn Pays

That hybrid corn varieties have come to take the place of our old open-pollinated varieties is the opinion of most corn growers. Practical farm results and experiment station tests have built up a mass of evidence in favor of hybrids. Since hybrids are less tolerant to variations than are the varieties now being used, it is very important to select a hybrid which is the right one for your soil and climatic conditions. Having selected such a hybrid, such for instance as the popular 29-3, then the next precaution is to get the true hybrid seed from a thoroughly dependable source. The seed of hybrid varieties costs more than the open-pollinated varieties since it costs more to produce this seed, yet it is worth many times more than the difference. Farmers have actually found that since the kernels are smaller, a bushel of the seed plants more acres.

Better Grass Seed

The increasing demands for special strains of grass and forage plants, such as are used in the permanent pasture mixtures, have caused a few professional seedsmen and seed sources to give particular attention to the genuineness of the stocks they secure. This is especially true of the strains of wild or permanent pasture types of white clover and the types of perennial ryegrasses.

Already this season a plan of approval has been set up and has now approved a considerable volume of the seeds to be used in the Cornell Pasture Mixture and similar mixtures. In some cases a registry number has been issued to the few special seed sources who have undertaken the assembling and blending of these special mixtures. This is bound to be of great value to those farmers who have decided to go into this new plan of grassland agriculture and who need the proper strains.

A most regrettable practice is followed each year by a few farmers who send away to some out-of-state seed company for so-called "bargain" seed offered at ridiculously low prices. Advertisements of these seeds are glowingly spread in a few farm papers—(Editor's Note: Not in *American Agriculturist*)—and enhanced by offers of "free" samples which usually bear no resemblance to the seed stocks actually delivered.

Case after case has been investigated where some very troublesome weed has been profusely scattered over a countryside through just such low quality bargain seed. It was purchased by some unthinking farmer who really believed he was saving money, yet paid dearly for the few pounds of useful seed he secured along with the weed seeds and screenings or light seed he received. There is plenty of excellent seed in the hands of local seed sources to meet all demands, and surveys show that it is being offered at prices which

are just as low as they can possibly be, consistent with prices paid to farmers for their seed crops.

Right along with this practice of sending away for some questionable or poorly described seed, comes another practice which far too many farmers follow. They dash away to some elevator or feed store just at oat planting time to get some so-called "seed oats" which are really only feed oats of one or more varieties. They are not adapted for use in this area, and too often are contaminated with wild mustard, wild buckwheat, and the very noxious bindweed seed. Great volumes of this sort of seed are sold each spring, whereas far more valuable high yielding adapted varieties of certified seed oats or their equivalent can be bought at but little over market grain prices.

Better Protection

The newly enacted Federal Seed Act, which became effective for agricultural seeds on February 5, will be of great benefit to farmers since it is now required that stocks of the field crop seeds shipped over state lines must be accurately and very fully labeled. This Act, which really supplements the state seed law, also prohibits the trucking across state lines of untested and unlabeled seeds. Heavy penalties are provided for violations.

This is an excellent opportunity for state and federal cooperation in the curtailment of the movement in interstate commerce of seed of unknown varieties, often unfit and even very objectionable for seeding purposes.

All in all, the buyer of seeds has at his command this spring protection such as he has never enjoyed in the past. He can check up on any and every seed source very easily and thoroughly if he but desires to do so. He need take no chances whatever and thus get caught at the end of the season "holding the bag."

"Then Plant a Green Garden"

(Continued from Page 6)

a new double form dwarf, with pink tinted white blooms, while Repens Rosy Veil forms really pink double blooms. Pacifica, a new single pink introduced some years ago, varies greatly in color of blooms and is apt to be straggly. The plants which I grew from seed winter-killed and I did not grow more.

The more I know about the hybrid daylily, hemerocallis, the more I am impressed by its usefulness in the garden. It is adaptable to most conditions, is winter hardy, and is quite resistant to disease. Hyperion, Mikado, Ophir, J. A. Crawford, Mrs. W. H. Wyman, Anna Betscher, Bay State, Ajax, and Gypsy are some of the varieties which give variation in color and time of bloom from the end of May until the middle of August.

No spring garden would be complete without Oriental poppies. A new and revolutionary one is Snowflake, white at center with reddish orange rim. A new golden yellow is Golden Surprise. Old tried varieties are Perry's White, Mrs. Perry, an orange apricot, and the

Beauty of Livermore, a rich dark red.

Phlox Dr. Klemm is a new dwarf phlox, white with purplish eye and veining. Phlox Eva Foerster, another dwarf one, has giant bright salmon-rose florets with large white centers. Harvest Fire was a new acquisition in my garden last summer; it is tall and vigorous with immense truss of salmon-red flowers with distinct carmine eye. Flash is another reddish phlox, having carmine-crimson flowers with orange-scarlet centers; plants are medium height. Other popular improved varieties are Leo Schlageter, bright scarlet with dark crimson eye; Graf Zeppelin, white with crimson eye; Salmon Glow, beautiful bright salmon; Painted Lady, silver pink with cherry red eye; Daily Sketch, enormous light salmon-pink flowers with carmine eye; E. I. Farrington, pink; Von Lassburg and Mary Louise, fine all-whites.

Pyrethrums, or painted daisies, may now be had in colors ranging from white through the pinks to dark red and from single to the very double. This is a plant easily grown from seed, although if one wishes to be sure of a named variety, it is best to buy the plant. Pink Bouquet is a new double variety with especially strong stems.

Peach bells, campanula persicifolia, which grow easily from seed and are very attractive in arrangements, may be had in white or blue. Wedgewood is a new blue which its name describes. Penstemon, although attractive in the common red form, now is available as a named variety Shell Pink. It, too, is exceedingly dainty in arrangements. Russel lupins, now available as reselect seed, bloomed nicely for me last

year. Their colors are most unusual, many of them being bi-colored.

Shasta daisy, Admiral Byrd, is a new double, frilled, very large and hardy.

Scabiosa, that lovely flower for cutting, is particularly satisfactory in the Isaac House hybrids which are giant in size and range from delicate lavender to rich purple. Scabiosa Fischeri is a new Manchurian variety covered with violet blue flowers through most of the summer.

Strawberries for the Home Garden

(Continued from Page 1)

as they appear, as fruit the first year will greatly reduce plant growth.

As soon as the runners appear in quantity, space them carefully around the mother plant six to nine inches distant from each other. After the row is filled with plants to a width of 18 inches, all runners which develop later should be removed and not allowed to root. Many varieties produce far more runner plants than are needed for a full crop. These surplus runner plants produce very little fruit and compete with the others for moisture and nutrients, with the result that the size of berry and amount of crop are greatly reduced the following year. More plants than are needed to fill out the row when well-spaced are worse than weeds in a strawberry bed.

In late August and early September, the strawberry plant forms the fruit buds which will produce the crop the following year. At this time a plentiful supply of plant food is needed to stimulate fruit bud formation. An application of 250 pounds to the acre of nitrate of soda or sulphate of ammonia at this time has often given good results in terms of next year's crop. To prevent burning, apply the fertilizer when the foliage is dry.

MULCHING. All strawberry beds should be mulched for winter with straw, marsh hay or some similar material. Failure to mulch means a weedy bed and dirty berries difficult to sell. In open winters with little snow, an unmulched bed may be severely injured by freezing of the crown and consequent destruction of the stored food which is necessary for a vigorous plant the following spring. Unmulched plants may appear normal in the spring but collapse in hot weather under the strain of ripening a heavy crop. The old rule to apply the mulch after the ground was frozen has been modified, and it is now believed that the mulch should be applied before temperatures in the fall drop below 20° F. An early sharp freeze in which the temperature drops below 18° F. before the plants are fully ready for winter is most dangerous. In general the mulch should be applied in New York state before November 15th.

Old Apple Trees Must Go

(Continued from Page 7)

orchard gets so tall, so shot with accidents and disease, and so out of date perhaps as to the market demand for the variety, that replacement is the only way to make a profit. It might be wise to admit this and plan for the rotation rather than prolong the agony of working at a loss till one is finally forced to cut them down.

It is pretty hard to tell what varieties will be most profitable ten years from now, and the loss from a large block of trees of the wrong variety may be enough to put an apple grower out of business, so I am pretty well convinced that one ought to plant in fairly small blocks every few years to keep new trees and new varieties coming along all of the time.

Apple growing is a long-time business and it takes so long to find out mistakes and correct them, that we might be on safer ground if we make them in smaller doses.

DIBBLE'S

tested Heavyweight Oats

With 1939 oats crop about 125,000,000 bushels short of 1938, and 11% short of ten year average, really high quality seed oats will be in demand. Right now our stocks are good, and prices right.

LOW COST FEED when you need it most

for **FRUIT** Domestic
SULPHATE OF AM-
MONIA, applied to
fruit trees, strengthens
the bloom, betters the
set and increases the
yield.

for **GRAIN** Domestic
SULPHATE OF AM-
MONIA, at 100 pounds
per acre applied early
on winter wheat, usu-
ally adds 5 to 7 bushels
per acre to the yield.

U. S. PRODUCERS OF
BY-PRODUCT AMMONIA
50 W. Broad St., Columbus, O.

WHEN HAY is getting low in the
mow... when your silo is
nearly empty... that's when it
pays to have your pasture com-
ing along with an "early bite" of
high-protein feed. When you top-
dress with 200 pounds of Domestic
SULPHATE OF AMMONIA per
acre, your grass starts vigorous
growth one to three weeks ear-
lier. Try it this spring. Apply the
SULPHATE just as soon as you
can safely get on the land. Each
fertilized acre will usually fur-
nish sufficient early feed for four
mature animals in your grazing
herd.

Fence off the fertilized pasture
with a temporary fence. Keep
your cattle on the fertilized pas-
ture until the unfertilized is
ready for grazing—then give
each area necessary rest periods.
This prevents cattle from neglect-
ing unfertilized grass and per-
mits better growth.

Remember, SULPHATE pro-
duces earlier grazing and more
green weight. Give it a trial on
your farm. Tell your fertilizer
man you want Domestic SUL-
PHATE OF AMMONIA, made in
the U.S.A.

Send for your free copy of
"PLANT FOOD FROM COAL"

Raising Replacements for the DAIRY HERD

IT HAS been said a good many times
that it is cheaper to buy a cow than
it is to raise one. A man who accepts
this maxim has certain handicaps to
overcome. Buying cows increases the
chances of introducing disease, there is
less opportunity to know the transmit-
ting ability of the ancestors, and at
times it is difficult to find and buy the
kind of cow the dairyman wants.

To maintain a herd it is necessary to
raise each year nearly 1/4 as many heif-
ers as there are cows in the herd. This
will replace cows disposed of because
of age, plus others that may be culled
out because of low production.

Raising calves from the best cows
in the herd is not enough. If possible,
use a proven herd sire whose daughters
are known to be heavy producers. If
this is impossible, a young herd sire
whose close relatives are good produc-
ers or sires of good producers will les-
sen the chances that the heifer will
be a disappointment.

It is often said that a herd sire is
half the herd, but it is quite as im-
portant that the dam of the calf have
near relatives that are consistently
good producers. When an entire family
produces heavily, they are likely to
breed true to type.

It costs just as much to raise a calf
with poor inheritance as it does one
with a good inheritance. In fact, one
of the first reasons for raising a calf
is that the breeder can be certain of
the inheritance back of it.

Grow 'Em Fast

RAPID growth should be the aim in
raising a calf. There are a good
many figures to indicate that, within
the breed, the larger cows produce
more milk than smaller ones of equal
breeding. Size is partially a matter of
inheritance, but the way they are
grown is also important. The principal
factor in size is feed. A young animal
makes more economical gain—that is,
it takes less feed to put a pound of
weight on a young animal than it does
on an old one. Therefore, it is particu-
larly important to get them started off
on the right foot.

Cornell Extension Bulletin No. 361
states that at six months of age a Hol-
stein should weigh at least 365 lbs., an
Ayrshire 287 lbs., a Guernsey 267 lbs.,
and a Jersey 250 lbs. It has been
found that where it is difficult to weigh
calves and cows, a close estimate of
their weight can be made by their
heart girth. Cornell Extension Bulletin
No. 361, already mentioned, gives a
table showing the relation between
heart girth and weight.

To get rapid growth the amount of
feed consumed is most important. It is
practically impossible for a calf to eat
too much.

Saving Milk

IN A SECTION where fluid milk is
sold, it is important to raise a calf
on as little milk as can reasonably be
done. At the same time, it is false
economy to use less than the minimum
amount required, about 350 lbs. You
may be able to raise good calves on
less, but most people think not—that
is, of course, unless skim milk is avail-
able.

For the first week a calf can get 5
lbs. of whole milk a day. This can be
increased a pound a week until they
are four weeks old, and then decreased
a pound a week until they are ten
weeks old, at which time they will be
getting 3 lbs. After that they can get
along without milk if they get the
right feed.

Where skim milk is available, it can
be substituted for whole milk about the
third week, taking a week to make the
change. If plenty of skim milk is avail-
able, it can be fed until they are six
months old.

Another way to cut down on the
amount of whole milk fed is to use
dried skim milk if you can buy it at
a cost that is economical. 1 lb. of dried
skim milk plus 9 lbs. of water makes
10 lbs. of skim milk.

Grain for Calves

CALVES will begin to eat grain
when they are three weeks old.
They won't eat much to start, but the

amount can be gradually increased,
giving them all they will eat twice
daily until they are eating 4 lbs. a day.

One reason why calves can be
changed from milk to grain at an ear-
lier age than formerly is that better
calf starters are now available, particu-
larly with respect to digestibility
and content of minerals and vitamins.
These can be either mixed at home or
a commercial calf starter used.

When calves are 16 weeks old, they
can be changed over to a good fitting
ration or to a mixture made up of 30
lbs. of ground yellow corn, 30 lbs. of
ground oats, 30 lbs. of wheat bran,
and 10 lbs. of linseed oil meal.

Good Roughage for Calves

A GOOD many dairymen feel that
calves should have plenty of
roughage in order to build up a diges-
tive system that can handle large
amounts of feed when they are mature.
The calves deserve the best hay in the
barn, and it is better to feed it in racks
than it is to put it on the floor. Legume
hay, properly cured so that it was not
bleached or rained on, provides vita-
mins A and D and minerals, particu-
larly phosphorus and lime.

A good many calves are turned out
to pasture too soon. The change to
pasture is often made too abruptly, and
sometimes the pasture does not furnish
sufficient feed. Even on good pastures
some dairymen provide a shed or barn,
where the calves can run in to get out
of the sun and away from flies, and
feed them in racks in this shelter, all
the good clover or alfalfa hay which
they will consume.

A spring calf is not old enough to
take full advantage of pasture. That is
one advantage of raising fall calves,
but even with the fall calves it is im-
portant to see either that they get
plenty of pasture grass or that they
have provided for them some good hay
and a liberal amount of grain.

Yearlings

YEARLING heifers that are brought
in from the pasture in good grow-
ing condition will gain weight on 1 1/2
lbs. of grain a day plus all of the first-
class hay they will eat. Even so, 3 lbs.
a day will make them grow faster, es-
pecially if they come in the barn a
little thin.

It is unnecessary to pamper heifers,
as they may become too fat. It is good
practice to let them rough it a bit,
assuming that they get feed enough
to keep them growing.

If silage is not fed, a heifer will
clean up 12 to 16 lbs. of legume hay a
day and from 2 to 4 lbs. of grain. It is
good insurance to add 1 lb. of steam-
ed bone meal and 1 lb. of salt to each
100 lbs. of the grain mixture.

Horse Works

Absorbine Sends Relief
Direct to Muscles and
Ligaments

A STRAIN doesn't have to lay your horse up.
When you use Absorbine, he can do light
work while he is being treated. Absorbine speeds
relief direct to muscles, ligaments. It increases
the flow of blood through them and the blood
carries off the congestion. Will not blister. Many
veterinarians have used it for over 40 years! At
druggists. \$2.50 a bottle. W. F. Young, Inc.,
Springfield, Mass.

ABSORBINE

For relief of Your Own Strains, Muscular
Aches and Pains, use Absorbine Jr.

THE 3 GEHL WAY

Put up hay, rain or shine
with a Gehl Cutter.
Makes grass molasses silage
from green hay—no curing required.
Means 50% more feed per acre, no risk from bad
weather. Automatic pump measures flow of
molasses in proportion to feed. Same machine
cuts hay into mow, or fills silo with corn.
Saves work, saves storage space, reduces
feeding waste. Valuable Free booklet
on hay chopping and molasses silage.

By J. F. (DOC.) ROBERTS

MILK cows are too high. All through 1939, they have sold out of proportion to butterfat prices. Plenty of heifer replacements the country over seem to make it possible to predict that lower prices for dairy cows are facing us. Unless we are careful, this, in turn, will tend to make more milk and even lower butterfat prices, and so the vicious cycle goes on.

Perhaps we should listen to our government reporters when they say that the number of heifer calves being saved for future milk cows is the highest ever reported in this country; also, the highest in relation to the number of cows on hand, or the equivalent of twenty-one heifers per hundred cows. This great age group of heifers would ordinarily be added to milking herds in 1941.

Mr. Wm. J. Brew of Bergen, N. Y., writes, "Milking Shorthorns work into a two-way plan of producing milk economically, and good young beef." Will go him one better and say that veal can also be economically produced, where there is no desire to produce

beef. Good milking Shorthorns, while they are hard to locate, are one answer to the prospectively lower cow and milk price. You cannot go very far wrong on a 140 pound veal calf in six weeks. The question is, "Will you let her do it?" or as Mr. Brew also writes, "It's the people in combination with the cattle and the farm, that make for success or failure."

* * *

Horses are not selling any higher than they have been, which is really too cheap. They are undoubtedly not meeting demand because of the short hay situation in the East. In spite of the fact that there has been considerable increase in colts through the East in the past few years, this increase is not nearly enough to supply normal replacements. Hogs continue to sell very low, in fact, too low. The anticipated raise in the hog market has not materialized, although it does not seem possible that hogs can long remain at their present low prices. Fat cattle of all classes are lower, although not sharply lower, except in the case of heavy cattle. Cows and bulls continue to sell at very satisfactory prices, due, of course, to the demand for all sorts of meat loaves, baloney, etc.

* * *

Your ewes from now on are going to demand more care and better feed, or you will almost surely run into difficulties. Exercise, along with the choic-

(Continued on Page 19)

Farm Sheep Records

By JOHN P. WILLMAN, Cornell University.

KNOW that a large percentage of farm flock owners admit that the sheep enterprise is a profitable one, but I believe that in many cases this enterprise could be made more profitable if a few simple records were kept on the flock. Even though the dairyman feeds his cows as individuals, he has learned that it pays to keep production records. Since the shepherd feeds and handles his sheep as a group rather than as individuals there seems to be fully as great a need for records on the farm flock.

Simple but accurate records enable the flock owner intelligently to cull his flock. They also make it possible for him to select ewe lambs that will enable him to develop a superior flock. In many cases these records are of value when making sales of surplus stock.

Flock records are kept in a variety of forms. It is recommended that they be kept in a notebook large enough to make record keeping easy. A notebook that is too large for the overall pocket is best because it is not apt to become lost as easily as a very small one. These records should include ewe number, date shorn, fleece weight, sire of lambs, lamb number, date of birth of lamb or lambs, their sex, date weaned, and size at weaning time. It is desir-

able also to have a space available for notes concerning the ewe or the lambs. Such remarks might include a note concerning a bad udder, lamb weak at birth, lamb died on pasture, etc.

Of course in order to keep these records it is essential that every sheep and lamb in the flock be identified. Probably the best method of identification is with the aid of ear tags. Every ewe should have her own ear tag or flock number and the lambs should be identified in this manner at birth. Owners of large flocks find it helpful to use wool paint brands which correspond to the number found on the ear tag. These paint brands should be large enough to be seen at a distance. A special wool marking paint should be used for this purpose. Such identification marks aid greatly in handling or sorting a flock when a large number of ewes and lambs are running together.

The use of records as suggested above may save the life of a thin ewe in the fall of the year. The records may show that she raised two of the best lambs in the flock while some other fat ewe did a very poor job of raising a lamb and produced a light fleece. There are few jobs in connection with the flock that will pay higher dividends than keeping records.

A real Milking Shorthorn, bred and owned by Hillside Farm, Shelburne Falls, Mass.

Twelfth Annual MASTER FARMER BANQUET

IN SPITE of an old-fashioned snowstorm which blocked roads, closed schools and delayed milk shipments, 484 people attended the Twelfth Annual Master Farmer Banquet on Feb. 15. This Banquet, now recognized as one of the big agricultural events of the year, comes on Thursday evening of Cornell Farm and Home Week, at Ithaca, N. Y. Total attendance for the week was over 11,000.

Louis J. Taber, Master of National Grange and one of the outstanding agricultural leaders of the country, was Toastmaster. Becoming snowbound in Waverly the morning of the Banquet, Mr. Taber, with his usual perseverance and ingenuity, managed to arrive on time. Several other distinguished guests spent most of Thursday on a train in Sayre, Pennsylvania, but they too arrived just in time for the Banquet.

Among those present were Mrs. Franklin D. Roosevelt and Mrs. Henry Morgenthau, Jr., both of whom have attended every one of the twelve banquets.

Others present included: Arthur Deering, Dean of the Maine State College of Agriculture; H. B. Munger, President of the Production Credit Corporation, Springfield, Mass.; George Lamb, President of the Bank for Co-operatives, Springfield, Mass.; Fred Sexauer, President of the New York State Conference Board of Farm Organizations; Henry Marquart, President of the New York State Vegetable Growers' Association; Harold Simonson, President of the Empire State Potato Club (Mr. Lamb, Mr. Marquart and Mr. Simonson are also Master Farmers); H. V. Noyes, Commissioner of Agriculture for the State of New York; W. J. Rich, Master of New York State Grange; Fred Freestone, member of the Executive Committee of National Grange; Harper Sibley, former President of the United States Chamber of Commerce; as well as countless other leaders in agriculture, education and business.

E. R. Eastman, President and Editor of *American Agriculturist*, presented the Toastmaster to the gathering. Mr.

Taber then called on Dr. E. E. Day, President of Cornell University, who welcomed the group to Cornell.

In presenting past Master Farmers, H. L. Cosline, Associate Editor of *American Agriculturist*, stated that 97 men have been named as New York State Master Farmers, 91 of whom are still living. During the past year the ranks of Master Farmers have remained unbroken.

In commenting on their farm activities, it was pointed out that 39 are dairymen; 16 grow vegetables, potatoes, or both; 13 produce fruit; 9 combine fruit and dairy cows; 6 find their principal source of income in the growing of cash crops; 6 combine production of milk and cash crops; 3 are specialized poultrymen; and 3 keep dairy cows and hens.

According to information recently brought up to date, 75 Master Farmers report 245 children, 121 grandchildren, and 1 great-grandchild—the distinction of great-grandfather being held by Floyd S. Wright of Otsego County, New York, one of the first Master Farmers named.

These men farm 18,412 acres, the largest farm in point of acreage belonging to H. N. Kutschbach of Chenango County.

For some years now the Cornell Glee Club, under the direction of Eric Dudley, has sung for Master Farmer Banquet guests. Each year it seems that the Glee Club is just a bit more enjoyable than it was the previous year.

The high spot of the evening is always the reading of the citations by Governor Lehman and the presentation of medals to Master Farmers and 4-A winners. Each Master Farmer and his wife are called to the Speakers' Table. The Governor reads the citation, presents the medal, and each Master Farmer makes a short response. Master Farmers are chosen by a Board of Judges headed by the Governor, and are selected because they are good farmers and good citizens and for the service which they have rendered to the agriculture of their community, county and state. They are not chosen on the

basis of wealth or size of business.

After the Master Farmer medals were presented, each winner of the *American Agriculturist* Achievement Award was called to the Speakers' Table and presented with his or her medal. As is the case with Master Farmers, 4-A Awards are given for the excellent work each winner has done in the organization to which he or she belongs, with equal or greater credit given to citizenship and community achievement. It is an inspiration to hear what these young folks have done, in some cases under distinct handicaps.

The picture at the top of this page was taken immediately following the Banquet.

Earlier in the day, the Master Farmers and wives followed the usual custom of having a luncheon at Willard Straight Hall. At the business meeting which followed, James Stone of Marcellus, Onondaga County, was named President of the Master Farmer Association for the coming year, and Charles Riley of Sennett, Cayuga County, Vice-President.

For some years Master Farmers have held a summer tour, visiting the farms of several Master Farmers, and plans are under way for such a trip during the coming summer.

No sooner does one Banquet pass into history than thought is turned toward Master Farmers for the coming year. If you have a farmer friend who in your opinion meets the qualifications we have set forth, it is your privilege and duty to nominate him as a Master Farmer. Just write to *American Agriculturist*, Post Office Box 367, Ithaca, New York, giving us his name and address; and, if you wish, state briefly why you think he should be considered for the honor. It is well to remember that rarely in recent years has a man younger than fifty years been given this honor.

We might add that in many cases the award is not given for several years after a man is first nominated. Some of the men who received their medals on February 15 were first nominated as

Master Farmers and 4-A winners for 1939. Left to right, back row: Fred Handy, Lancaster, Erie County; Aaron Putnam, Bath, Steuben County; Alexander Speirs, Slate Hill, Orange County; George Shultes, West Berne, Albany County; Alan Van Winkle, Camden, Oneida County (Boy Scout); Allison Arlen, Eden, Erie County (4-H Club member); Louis J. Taber, Master of National Grange, who was Toastmaster at the Banquet.

Left to right, front row: Lawrence Diver, Basom, Genesee County (Future Farmer); Mrs. Handy, Mrs. Putnam, Governor Herbert H. Lehman, Mrs. Shultes, Louise Mullen, Stafford, Genesee County (4-H Club member); Beverly Sisson, Sherburne, Chenango County (Juvenile Granger); John Huntley, Canton, St. Lawrence County (Juvenile Granger).

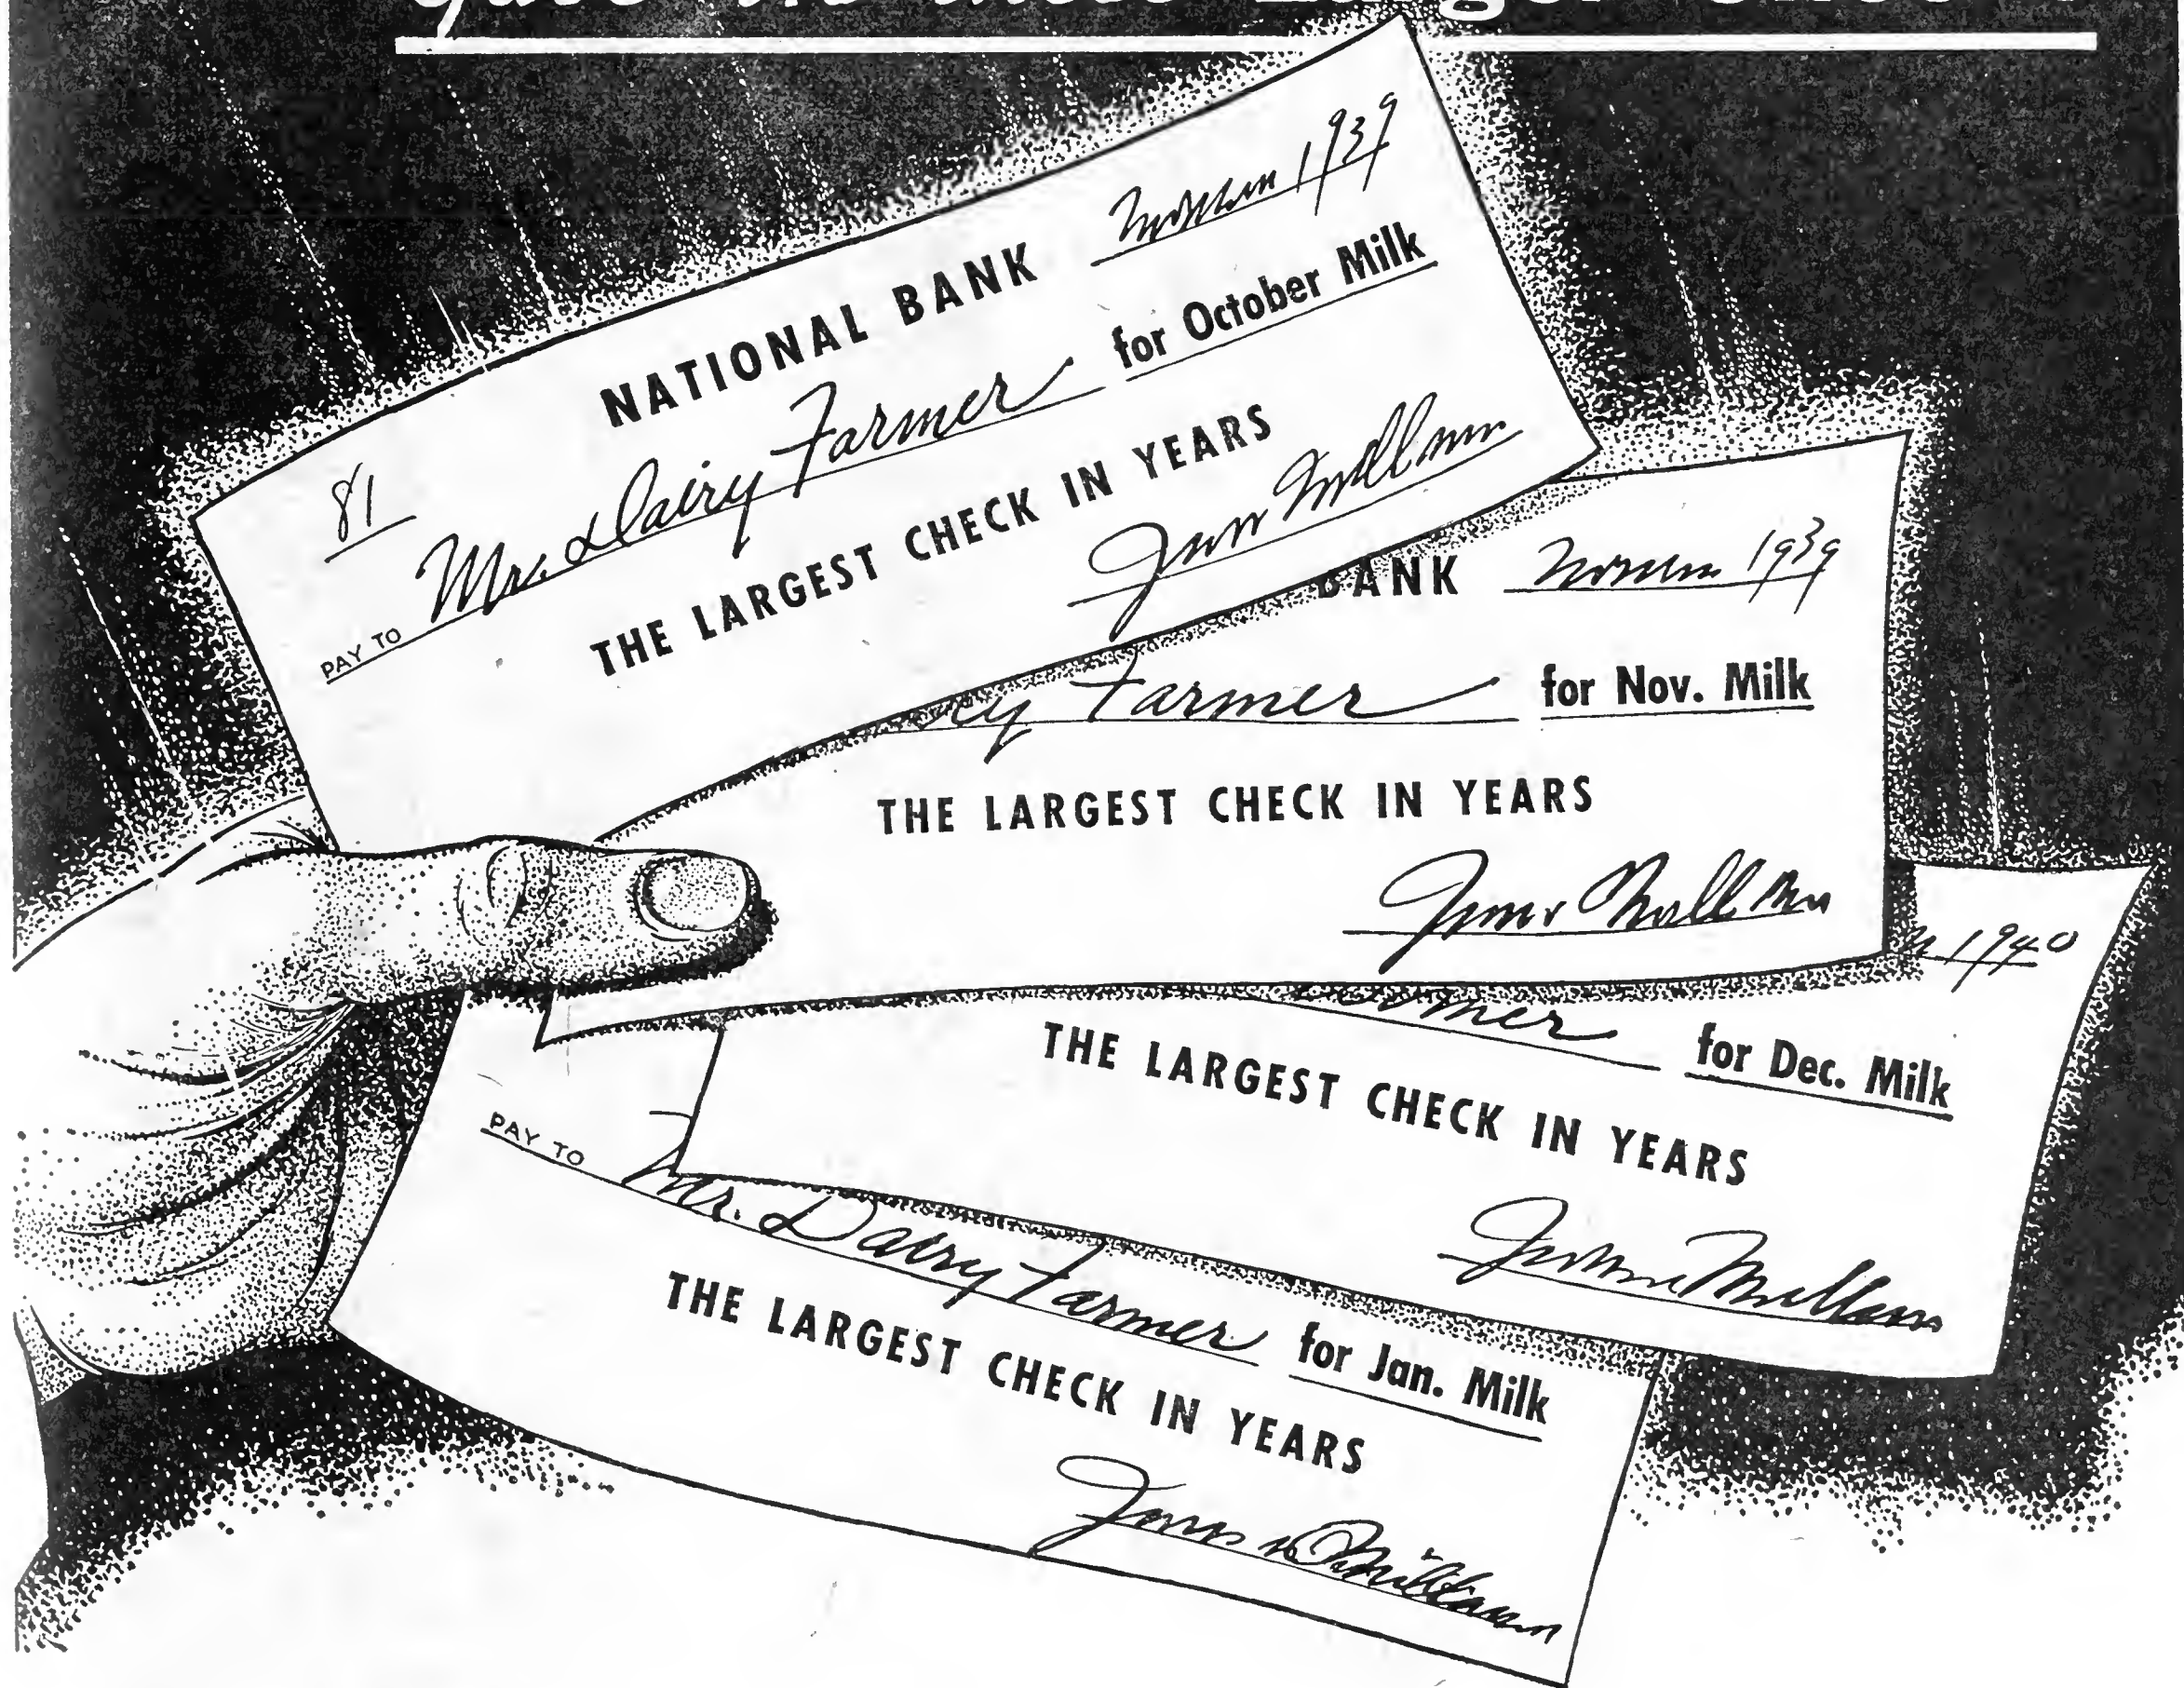

Due to weather conditions, Meade Palmer, Brookfield, Madison County (Future Farmer), and Kenyon Parsons, Sharon Springs, Schoharie County (Boy Scout), were unable to be present.

long as four or five years ago. Once a man is nominated, the Board of Judges consider that he is always eligible.

William F. Vollmer of Akron has been crowned Erie County Hay King for 1940. His Majesty William I. is shown here seated on his hay-stack throne with his pitch-fork sceptre and the silver trophy which was awarded to him by the Erie County Farm Bureau for growing the best hay last year.

Farmer Control of Surplus Milk Gave Us these Larger Checks

Farmer control of surplus milk is giving us the highest milk price we have known in years. Federal-State orders have made this control possible. These facts which are spreading cheer throughout our dairy farm homes prove what the Dairymen's League has contended for nearly a quarter of a century—THAT THE MILK PROBLEM WAS LARGELY A PROBLEM OF CONTROLLING THE SURPLUS . . . OF EQUALIZING MARKETS AND BURDENS.

Of course to make surplus control possible, it was generally recognized by all farm leaders that equalization had to be included. And it is now becoming clear to more and more dairy farmers in the milk shed that only the organized power of farmers can keep the gains we have made, and add others. For the good of all, we cannot too frequently warn against the efforts some dealers

will make to kill the effectiveness of the order. And this same opposition will throw its full weight behind every possible chance to divide the farmers.

Surplus control in the hands of farmers has kept the markets steady. Equalization which divides the Class I market among all producers has eliminated farmers bidding against each other. So today as we receive checks larger than we have received for the same month in years, let's give full praise to all dairy farmers who united in achieving this great success.

But while rejoicing over our good fortune, we cannot let up for a minute in our effort to further the cause of organized farmers. For COOPERATIVE EFFORT has built what we are getting today. COOPERATIVE EFFORT will hold it.

THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

NORTHEASTERN Slants

ON THE National NEWS

■ Youth Goes to Washington

MUCH SEEN and heard in Washington last month were several thousand members of American Youth Congress, who assembled for four-day citizenship institute which they said would be a "monster lobby for jobs, peace, civil liberties, education and health."

Recently this organization of young people (they claim to take in 63 national organizations, with total membership of 4,700,000) was much in limelight, partly because it was accused by Dies Committee and others of being under Communist influence, and partly because First Lady of the Land defended it and scoffed at Communist accusation. Washington meeting was expected by some to clear good name of Youth Congress, as it was known that it would then have a chance to act on resolution condemning Communist Russia's invasion of Democratic Finland, and also one on ousting Communists and Nazis from the organization.

Actually, when time came, Youth Congress turned thumbs down on both of these resolutions. Also, it either booed or listened in stony silence to President Roosevelt's speech in which

he denounced Russia's attack on Finland and rebuked Youth Congress for its own attitude toward it. It gave John L. Lewis, head of C.I.O. labor organization, an enthusiastic reception; cheered and laughed when he spoke sarcastically of President's speech; and applauded his invitation to make a political alliance with labor's Non-Partisan League. Also, on last day of their stay in Washington, some of the boys and girls flocked to House of Representatives and did so much hissing and heckling that they were threatened with ejection from house galleries.

Program adopted by Youth Congress calls for keeping this country out of war, getting jobs and governmental aid for young people, and safeguarding civil liberties.

SLANT: These young people appear to be their own worst enemies. Some of their aims are splendid, but it is unfortunate that they have such radical leaders. Their meeting seems to have, if anything, hurt their chances for getting sympathy of Congress and the public. They left a sour taste in the mouths of those who were most eager to help them, says Walter Lippmann in New York Herald Tribune, and he adds: "They were possessed with the notion that they were in Washington to tell the country what it owed them, but scarcely a word was uttered about what they owe to the

country." Also, they made it clear that their leaders, at least, are under Communist control.

■ Heap Big Secrets

MIDDLE of last month, President Roosevelt had two dark secrets. One, of course, was whether or not he is going to run for a third term as President. Second mystery, as of February 14, concerned his southern trip. When he left Washington on that date, aboard his special train, so much secrecy cloaked his movements that there was general speculation as to what was up. As soon as it was known the President would board cruiser Tuscaloosa at Pensacola, Florida, rumors flew that he was off to hold secret meeting with representatives of Britain, France, and Italy. As we go to press, President has just finished inspection tour of Panama Canal zone.

Third term riddle, however, is still unsolved in spite of many efforts to smoke out the President.

■ Cotton Stamps

LAST YEAR, United States Dep't. of Agriculture launched a "food stamp" plan to put more food on tables of relief families, and at the same time help to move farm surpluses. Last month, U.S.D.A. started a "cotton stamp" plan to distribute cotton goods to relievers, and to make a dent in cotton surplus. That it may be only a dent seems likely, since only 20c of each dollar spent for cotton goods goes for cotton (50c goes for processing the cotton, and 30c more goes for transportation, distribution, and other costs). At this rate, it is figured that the government will have to spend \$250 to move one bale of surplus cotton.

Plan provides that relief families will get \$2 in trade for every \$1 spent for cotton goods. They will be allowed to buy \$3 worth of stamps per person every three months, but will pay only half price. The cotton goods which they get free must be made in United States from cotton grown here. As in case of food stamp plan, cotton scheme will be tried out first in a few test cities.

■ Heard at Cornell Farm and Home Week

IN SPITE of severe snowstorm of almost blizzard proportions, New York farm families flocked by thousands to Ithaca to attend the annual Farm and Home Week there. Here are brief excerpts from speeches of three men well-known to farmers throughout the Northeast:

Dean Carl E. Ladd, of New York State Colleges and Agriculture and Home Economics:

"Northeastern farmers, as a whole, need to replan their year-around activities with the objective of getting more of their living from the farm. More living and better living on the farm is a good slogan for 1940." ****

"A fair price for milk is more effective than any one factor in keeping people on the land . . . in maintaining prosperity in rural villages, and in the general

welfare and happiness of the rural village and farm." ****

"New cash crops and cash income are spreading rapidly without our hardly being aware of their importance With the greater use of quick freezing, it may well happen that northern farmers will produce the vegetables for fresh consumption in the winter months. If this is to be successful, we shall need to be alert to adopt new methods, new varieties, and new markets."

Holton V. Noyes, N. Y. State Commissioner of Agriculture and Markets:

"It is not a healthy condition for the individual farmer, for the dairy industry or for our whole agriculture to permit milk to monopolize farm production in New York State. We want to place our agriculture on a more stable basis, and consequently a more profitable one." Farmers are not following sound farm practices when they neglect development of supplemental cash crops to diversify income and distribute risk, declared Commissioner Noyes.

Dr. W. I. Myers, former governor of Farm Credit Administration, and present head of Cornell's department of agricultural economics:

"The Farm Credit Administration should be restored to the farmer as an independent agency. Easy credit and subsidization are not the ways out of the present economic situation. They only lead to disaster." ****

"Controlling the production of a few basic agricultural products cannot by itself raise the income level of agriculture." The best means of changing the situation for the better and of eliminating violent fluctuations in price level, said Dr. Myers, is to have a monetary program changing the gold content of the dollar when necessary to achieve a stable price level. "If there is a better solution than that," he said, "let's find it."

■ Tractor Changes

PAST EIGHT years have seen remarkable increase in number of tractors on rubber tires. Recent survey made by Firestone Company shows that today 85 per cent of tractors are turned out on rubber, whereas back in 1932 all tractors were produced on steel wheels.

According to survey, there are now on American farms 1,700,000 tractors, and of these 603,350 are on rubber—either bought that way or changed over to rubber by farmers who originally bought tractors equipped with steel wheels. Following interesting table shows the picture:

Year	Tractors		Changed
	Sold	on Rubber	Over to Rubber
1932	13,224	0	0
1933	15,974	900	3,000
1934	49,188	4,600	7,300
1935	118,667	17,800	19,600
1936	158,444	50,700	27,100
1937	216,169	92,400	36,600
1938	143,702	98,000	38,500
1939	190,000	161,500	45,350
Totals	905,369	425,900	177,450

Also rolling along on rubber today are many threshing machines, combines, plows, wagons, sprayers, planters, potato diggers, cultivators, binders, mowers, and even wheelbarrows. Total value of tractor and farm implement tires sold from 1933 to date is estimated at \$77,000,000.

■ Farm Shorts

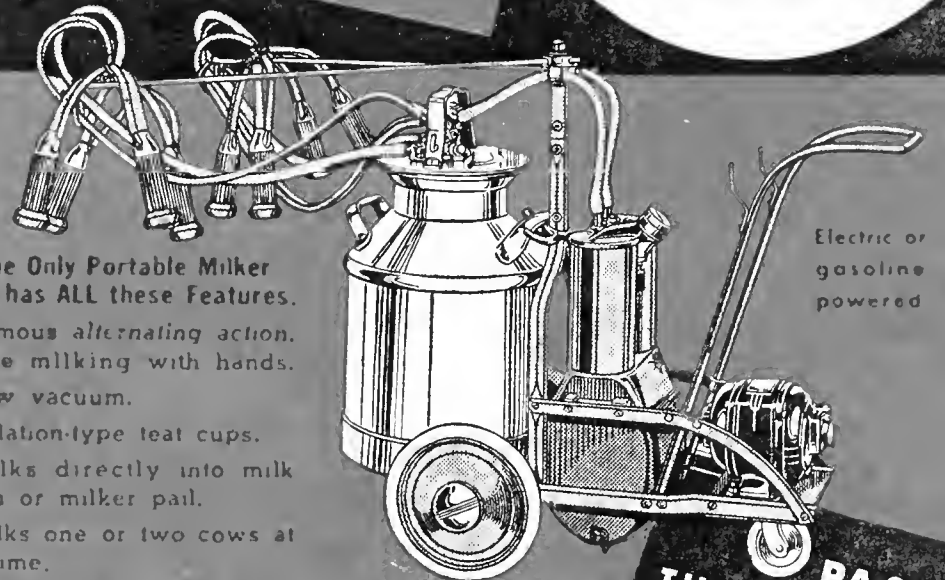

MODERN CRACKER BARREL MEETING

Indiana farmers and business men got together latter part of February, at Purdue University, for frank discussion of their problems. Meeting was one of series sponsored by Agricultural Cooperation Committee of National Association of Manufacturers. First farm-business get-together of this kind was held in Ithaca, N. Y.,

Name.....

Address.....

on March 17, 1938, and since then others have been held in various parts of the United States. Meetings are pep-py and as informal as in old cracker barrel days. One of main objects of study by Committee is the finding of new industrial uses for farm products.

MOVING NEW YORK TOMATOES

On Feb. 29 was launched vigorous ten-day campaign to help New York growers and canners move heavy stocks of canned tomatoes and tomato juice. Food chain stores throughout the state are cooperating with window and floor displays, and special advertising. They are getting the housewife's attention with recipe booklets, and moving only the highest quality tomatoes.

Canned tomato stocks on hand are said to be 36 per cent over a year ago, and tomato juice stocks 50 per cent higher than last year.

FARM-TO-MARKET ROADS

Out of 111,000 miles of highways, roads and streets which were built or improved by WPA workers during year ending June 30, 1939, approximately 98,000 miles of these were of the farm-to-market type.

IT'S AN ILL WIND

Big freeze which hit the South last month brought better business to frozen foods manufacturers. One company immediately ran a series of ads in northern newspapers, pointing out to housewives that frozen foods were cheaper than the prices asked for southern fruits and vegetables after crops were damaged and prices went up.

WISCONSIN COOPERATIVE WEEK

"In these days of stress, fear, and suspicion, when masses of people are struggling blindly against each other, and while nations are suffering the pains and privations of war, it is time to learn more of the meaning of cooperation and its expanding possibilities. I therefore designate the week of February 26 to March 2 as Wisconsin Cooperative Week."

—JULIUS P. HEIL, Governor of Wisconsin.

SLANT: According to a Farm Credit Administration survey, Wisconsin in 1936 had 1065 farmers' cooperatives, with 151,000 members, doing a business of \$112,488,000. Many other farm states, including those in North-east, have made similar progress in co-operative organization. Progress in solving farm problems will be made in the future, as it has in the past, by a program depending chiefly upon agricultural education and farm cooperation, rather than by cure-all schemes.

Scouts Celebrate 30th Anniversary

"DEMOCRATIC and therefore truly American," said President Roosevelt in his message to Boy Scouts of America, who met recently to celebrate their 30th anniversary. Today, over one million boys are active members in the organization, and one-half of them come from rural communities. Since organization was founded, nine million Americans have been Boy Scouts.

"Lord's Acre"

INSTEAD of bingo games and raffles to raise money for rural church funds, Rev. Elwyn D. Merriam of Perry, N. Y., suggests that communities have a "Lord's acre", proceeds of which shall go to the church.

In his own neighborhood, says Dr. Merriam, farmers donated 31 acres of land; also use of machinery and labor. Garage men gave gasoline and coal oil for the tractors; fertilizer was donated

with the help of business men; and others contributed what they could. Land was planted to buckwheat, and in spite of bad weather it yielded about 19 bu. to the acre, or a total of 602 bu. Net profit was \$230, and this was turned over to the church.

In some communities, 4-H Club boys and girls, as well as other farm children, raise something—a hen, vegetables, or what have you—and donate their sale price to the church.

SLANT: This seems to us like a fine way to develop a real personal interest in church affairs on the part of young and old.

Finland Weakens

WHILE Finland's friends are slowly preparing to give her some help, the little Republic is in midst of what may be a death struggle with Russia's vast forces. Last month, after many weeks of getting nowhere, Russians launched major offensive. Without counting cost of life, they threw line after line of Russian soldiers against Finland's fortifications, and it is said

that Russian tanks advanced over dead bodies of thousands who were killed. Under this attack, Finns have had to drop back, though they claim that their main defense line has not been weakened.

Good Books to Read

CAPTAIN ABBY AND CAPTAIN JOHN, Robert P. Tristram Coffin. This is a book of a great ship family, a great captain, and a great seafaring mother. John and Abby Pennell, of Pennellville, Maine, flourished in the time when being a Maine coast citizen meant being a citizen of the world. It tells by logs and diaries how a husband and wife spent the years of their wedded life continuously on the ocean, how their children were born there, how they endured storms and an earthquake and a tidal wave, visited romantic cities, and how finally the captain was brought home to lie among his people under the pines of Maine.—The Macmillan Company, New York. \$2.50.

OSA JOHNSON'S JUNGLE FRIENDS, Mrs. Martin Johnson. Mr. and Mrs. Johnson made many trips in "Osa's Ark", the airplane used by the explorers, and well named because Mrs. Johnson collected

animals of all kinds in it. In this book the reader meets Pantaloon, the baby elephant who became an aviator; Dyna-Mite, the lady boss of a busy monkey village; Bessie, the affectionate Borneo orang-utan; Snowball, the ape; and many others. The book is dedicated "to the children of the world, in the hope that they will be kind to all animals", but this reviewer knows from her own enjoyment of it that it is equally interesting to all lovers of animals. — J. B. Lippincott, Philadelphia, Pa. \$2.00.

Good Movies to See

NORTHWEST PASSAGE. This film version of Kenneth Roberts' historical novel is so realistic that eventually you feel yourself a part of the life these men lived. During the time when the State of Maine was still a frontier, Major Robert Rogers (Spencer Tracy) was believed by many to be the greatest of all Indian fighters. With his Rangers, 200 strong, Rogers fought his way through the wilderness for 22 days, arriving at St. Francis in Canada, and making a conquest of the Redmen who had made devastating raids on the New England settlements. After a terrible return journey, Rogers and his Rangers were hailed as heroes.

Roll along TO Better Living WITH ALL-CROP INCOME

When you become the owner of an All-Crop Harvester, you have capped your last shock. You have tucked your shirt in to stay, said goodbye to beards and dust. On the cushion seat of your tractor, you can take a deep breath of pure air and roll along to BETTER LIVING.

Shocks that soak up rain and mold your grain vanish into the twilight of a by-gone age. In their place spring up clover that used to smother out, soybeans, soil-anchoring grasses, stalk-ripened grains . . . ALL-CROP INCOME instead of one-crop income!

The All-Crop Harvester has simple adjustments of its wide, rubber-cushioned bar cylinder for 102 crops. Variable speed V-Belt drives make in-the-field changes easy! Green weeds, rank or lodged straw go through unbroken, instead of "cider-pressed" by cylinder teeth or a tight-squeeze threshing rear. You can save windrowed crops, save 10 cents a bushel over binding-threshing . . . often save enough more bushels to pay the cost of harvesting! Eat your threshing meals at home this year. Better family living awaits you . . . with the All-Crop Harvester!

MODEL 60 (Below) Like the Model 40, has all-rubber vulcanized shelling contacts, AIR-BLAST separation. Now with all-weather rubberized drapers, power take-off shield. For 2-pow power. New 6-foot SPEED WINDROWER available. Hart Scour-Kleen, pickup attachment (pictured) extra equipment.

MODEL 40 (Above) Your one-pow tractor will operate it from power take-off. Like the Model 60, needs no auxiliary motor! Capacity up to 1 acre an hour, 40 acres ripening at one time. Wide bar cylinder. Straw is unchewed, easily saved with hay tools.

Down the Alley

(Continued from Page 13)

est hay and the best grains that you have, will almost surely prevent pregnancy disease; also the ewes will do better, have a better milk flow, will raise better lambs, and have more wool.

Lamb prices have been well maintained in spite of very heavy marketings in the past two months. About 183,000 more lambs have gone into trade channels than for the same two months, December and January, a year ago. This more than takes up all the surplus marketings which we faced at the beginning of the fed lamb season, and barring some unforeseen war situation, we should have a better lamb market beginning right away, with lambs really scarce and considerably higher during the latter part of April and the first of May.

Wool continues to be in a very strong position, and this in spite of all the 'bear' stories we are all hearing in regard to it. Again, do not sacrifice your wool for any reason.

"Any of you guys want a young heifer?"

Beware of Substitutes

Bag Balm has many imitators, with similar packages and similar names. Be sure to demand only Bag Balm if you expect Bag Balm results. It is sold by all druggists, and most feed dealers and general stores . . . an honest product honestly priced. 10 full ounces for only 60¢. Ask also for BAG BALM DILATORS, molded to the shape for correct healing of the milk duct. Smooth, ivory-like, will not absorb pus infection. 25, sterilized and packed in anti-septic Bag Balm, 60¢. By mail if dealer is not supplied.

DAIRY ASSOCIATION CO., INC.
 DEPT. 12, LYNDONVILLE, VT.

**Insist on ANTISEPTIC,
 Non-toxic Bag Balm—
 Great for Tender Tissues**

For successfully promoting the health of udder and teats . . . fighting Caked Bag and the annoying check on milk-flow resulting from chaps, cuts and wounds . . . why accept less than Bag Balm gives you. This famous ointment is scientifically designed for action on the delicate tissues, while a harsh "salve" can actually delay Nature's healing job. Made for years of the finest ingredients to encourage circulation and promote quick, natural healing, the well known Bag Balm results are now supplemented by the addition of a new ANTISEPTIC ingredient that kills harmful germs in wounds, on contact, yet has no toxic effect on tissues. Just the right stiffness for best results in massaging congested areas; no unpleasant odor to taint the milk.

FREE SAMPLE—Write for generous facsimile package to demonstrate for yourself how **BAG BALM** promotes rapid, clean healing. Send 4¢ stamps for packing and postage.

FREE BOOK—"Home help for Dairy Cows," a 32-page illustrated treatise on cow ailments, written by eminent veterinarian. Includes chapter on home mixing of grain rations.

Every Farm Family Can Now Have All the Convenience of RUNNING WATER

Don't pump or carry water any longer. Send for BURKS' Free Book on Deep and Shallow Well Water Systems. Advertisers

FERTILE PASTURES

Every dairyman is interested in better pastures for his herd. Experience has shown that the first essential is usually to add plant food. If you want better pastures, drop a post card to the AMERICAN POTASH INSTITUTE, Investment Building, Washington, D. C., and ask for the booklet "The Cow and Her Pasture."

FOR BETTER CROPS

There has never been a time when farmers were so interested in getting the latest information on farming. "The Grow More Manual—A Guide to Better Farming" answers thousands of questions about seeds, soil, and profitable crop production. THE GARDNER SEED COMPANY, 41 Spencer Street, Rochester, New York, will be glad to send this booklet on request.

NITROGEN FROM COAL

It is not so many years since scientists predicted that the world's population would eventually starve. That was before we knew much about commercial fertilizer. "Plant Food From Coal" is a thrilling story of the manufacture of sulphate of ammonia. It is available from the U. S. PRODUCERS OF BY-PRODUCTS OF AMMONIA, 50 W. Broad Street, Columbus, Ohio.

SHEARING SHEEP

It won't be long until sheep shearing time. If you keep sheep, you will be interested in the booklet "Harvesting the Farm Flock Wool Crop" which you can get without cost from the CHICAGO FLEXIBLE SHAFT COMPANY, 5664 Roosevelt Road, Chicago, Illinois.

CONTROLLING MASTITIS

The control of mastitis is one of the big problems that dairymen face. A post card to the NEAR'S FOOD COMPANY, Department 1039-G, Binghamton, New York, will bring you a folder on "Garget—Its Detection and Treatment," and a supply of free mastitis detectors. When you write, tell how many cows you have in your herd.

WARM COVERS

The patchwork quilt is staging a comeback. Grandmother made them from necessity—modern housewives make them from choice. For a book of quilt patterns, send 10c and the name of your drygoods store to LOCKPORT COTTON BATTING COMPANY, Department D-4, Lockport, New York.

MORE EFFICIENT TRACTORS

"The number of tractors on American farms will double during the next five years." That is the opinion of J. J. Frey of the ETHYL GASOLINE CORPORATION. In his opinion the new small type tractor will play an important part in this expansion. Mr. Frey points out that four years ago it took 230 lbs. or more of tractor to produce one horsepower, while today one horsepower can be developed from a weight of 70 lbs. of tractor. A present day airplane engine will deliver nearly one horsepower for each pound of weight. This gain in efficiency has been

The boy at the left is Joseph Maier of Webster, N. Y., high school winner in the Future Farmers of America Chick Rearing Contest for 1939. The cup, offered by DR. SALISBURY'S LABORATORIES, Charles City, Iowa, is being presented to him by G. M. Eddy, representing that concern.

due partly to the introduction of new steel alloys and partly to increase in the rate of fuel compression in the cylinders of the engine.

FARM BUILDING PLANS

Under the title "Greater Farm Profits from Better Farm Buildings," WEYERHAEUSER SALES COMPANY of St. Paul, Minnesota, gives information useful to any person who plans to construct farm buildings. The booklet explains the Weyerhaeuser service, which includes blueprints and material lists for 200 farm buildings and construction jobs. You can get it by dropping a post card to the Weyerhaeuser Sales Company at the above address.

HOW TO GROW STRAWBERRIES

"Allen's Book of Berries for 1940" is more than a catalog. It has a section called "Common Sense Methods for Growing Good Strawberry Crops." This section is made up of four pages of boiled-down information which should be of great help to any strawberry grower. All you need to do to get your copy is to drop a post card to the W. F. ALLEN CO., Salisbury, Md.

DE LAVAL MONTHLY

The January-February issue of the De Laval Monthly, published by the DE LAVAL SEPARATOR COMPANY, 165 Broadway, New York City, has a picture of the herd of George Burbank, West Burke, Vermont. This picture shows the herd in the stable being milked with a Magnetic Speedway outfit. Mr. Burbank has used De Laval milkers for 13 years.

The same issue contains a stable picture of the herd of Miller Brothers of Clarks Summit, Pa.

More Eggs Should Be Eaten

By J. C. HUTTAR

THE CLOSER you keep to the egg market the more you realize how little it takes to upset it. It has had its ups in the last ten years but it has just seemed to me that it was easier to push down. "Nervous" is what the market men call it. I know that we all have our ideas on what causes this but why bring them up. There's one reason that most of us realize we're going to have to face sooner or later and that is the crowding of eggs into a "back seat" in the average family's diet.

J. C. Huttar

Whether we blame it on folks not working as heavy as they used to, or the vitamins in citrus fruits or the expensive advertising of the cereal manufacturers, it still comes out the same.

Supply and Demand

Undoubtedly we are producing a lot more eggs than we did twenty years ago. Back there practically all the eggs were either eaten fried, poached, boiled or scrambled or were broken out by the housewife for cake and pastries. Now the bulk of the baking is done by the large commercial bakeries. They either buy eggs in cans, because they can be measured out more accurately, or they use some substitute. And as for table eggs—well, a lot of people seem to get along without them unless the price is pretty reasonable.

The situation looks to me like we would either have to bring the supply of eggs produced down to a smaller demand or persuade town folks that they ought to eat more of them.

What's In an Egg?

Doctors and dieticians certainly recommend eggs as a real important part of a good diet. In fact eggs have a lot to be said for them from a nutrition standpoint. They should even appeal to the young lady whose figure is her biggest care, for, I'm told they won't increase the waistline.

But the trouble is that most people don't consult doctors and dieticians often enough to be impressed with these facts. So, in spite of the real all around value of eggs some advertising and real promotional work will some day have to be put behind eggs before they can regain any lost ground.

A lot of folks connected with the production and marketing of eggs have said this for quite a while. I have personally sat in on at least a dozen meetings where this problem has been worked on but very little real action ever came out of them. Usually all at the meetings would easily agree that this is a serious matter and often some good plans for consumer education were laid out. But then someone would suggest that it takes money to make the plans work and that's where the trouble began.

Producers thought that feed and poultry equipment manufacturers should pay most of the bill. Feed manufacturers felt that their treasuries were most easily tapped and that the others who profited by a prosperous poultry business were not going to come through. Eastern poultrymen felt that western poultrymen were not going to pay their share of the bill or vice-versa. And so the meetings often ended.

There has been some good work done

by special egg drives put on by grocery stores and drug stores but these drives usually only lasted a week and were too far apart. The New England Fresh Egg Institute with Homer Huntington, a poultryman, as the active worker, has made a real sustained drive at this job. But one region, with limited funds, just can't make too much of a dent. The same is true of several very worth while campaigns put on by the International Baby Chick Association.

The World's Poultry Congress

You folks will remember about a year ago I said in this column that I hoped the World's Poultry Congress would give the whole poultry industry the start it needed for tackling this job right. I said this because I knew that all parts of the industry were backing the Congress.

Well, the Congress was a real success, from the angle that it was an event we all could be proud of and was well attended. It came out about five thousand dollars to the good. Part of this has had to be used since in winding up the affairs of the Congress. So there isn't too much left in the way of money. But a very businesslike and unselfish group of people were banded together and they're still willing to work on this cause. A mass meeting was held on the ninth day of the Congress where a committee of twenty was selected and asked to draw plans for consumer education work. The committee has done its job and if you have read this column regularly you should know about it. The plan looks good and fair to me. Either the poultry industry will grab it and go to work (or on some better plan) or we've got to cut the number of hens kept to meet the present day demand for eggs. That's the way it looks to me. What do you think?

Point of View

In the scheme of marketing the yearly crop of eggs are those folks who buy and store the surplus produced in the first six months. Intended to take the gamble out of such an investment is the operation of trading in "Futures" on the organized Mercantile Exchange.

In the spring, when eggs are going into the coolers the producer rightly feels that he gets little enough for his product. But here's where we see how important point of view is. The man who is either storing eggs as an investment and necessary part of his business or simply on speculation has a different point of view. He'd like to see eggs go just as low as possible at that time of year so that there is surely a profit in selling them the next fall and winter.

This point of view is well shown in (Continued on Page 23)

"Hi, Bill! Since when did you get married?"

Here is something new in poultry houses. This all-metal house, manufactured by the MARTIN STEEL PRODUCTS CORP. of Mansfield, Ohio, is 20 feet wide and 48 feet long. It is being erected on a concrete foundation, and the inside is lined with insulating board. On the same farm is a 500-chick all-metal brooder house which was erected by two men in eight hours.

Around the Henhouse

Stop Production Slumps

Is there any way of preventing production slumps during cold weather?

They cannot be prevented, but they can be somewhat reduced. For example, you can keep in touch with weather forecasts, and when cold weather is predicted, you can adjust ventilation to keep the house temperature from dropping too low, and you can increase feed consumption by using wet mash. Preventing production slumps is more profitable than it is to correct them after they occur.

* * *

Choosing a Breed

I am starting in the chicken business, and would like to select a breed which is not common in this area. I would like some breed that would lend a distinctive touch to my farm.

There is always a temptation to try something new, but in this case I suggest that you pick a well-known breed if you are interested in profits. There are a number of reasons for this. First, more breed improvement work has been done on the well-known breeds, and it is easier to get the chicks you want. It is also easier to find customers if you build up your flock to the point where you are interested in selling breeding stock.

* * *

A Straw Loft

A reader asks about the advisability of packing four inches of straw into the rafter spaces of a poultry house, between the roof and ceiling. Straw so used will have some insulating effect, but will be hard to renew if it gets damp or becomes infested with mites. It is much better to put joists across the poultry house about 6 or 6½ feet above the floor, tack strips or frames covered with woven fencing on the under side, cover with 18 to 24 inches of clean straw, and make a baffled or louvred opening in each gable end above the straw. This will let out most of the moisture and foul air but hold in most of the heat, and with the south windows opened a trifle will give good ventilation without chilling the hens. Some owners change the straw each year, while others use for several years without changing, with apparently no bad results.

* * *

Handling Broody Hens

Is it advisable to sell broody hens in order to eliminate this difficulty?

That depends. Undoubtedly the tendency to broodiness is hereditary, but that doesn't necessarily mean that every broody hen should be sold. One way to handle the situation is to put a leg band on a hen every time you shut one up. When a hen accumulates as many as three bands, that is a pretty good sign that she should be sold. The easiest time to break up a broody hen is when she first starts. You should put her in an airy coop where she has no opportunity to set, and feed her a good laying ration. She will sometimes get back into production in a few days.

* * *

Visitors

Is it wise to allow visitors in a poultry house?

There is a big difference of opinion on this matter. Some poultrymen are very careful to allow no visitors in their poultry house—others seem to pay little attention to it. Personally, I think there is a distinct possibility of introducing disease in this way, and any visitors can usually get an

excellent view of the birds without actually entering the pen. I know some men who keep a pan of disinfectant and ask visitors to step into it before they go into the pen.

* * *

Cannibalism

Can you give us any hints that might prevent cannibalism among chicks?

Two conditions that favor picking by chicks are overcrowding and too high temperature. Give them plenty of room, avoid over-heating the brooder house, and keep the chicks busy. Quite a number of people believe that putting some whole oats in the scratch grain as early as four weeks of age will help to reduce the trouble.

* * *

A Reliable New York City Poultry Terminal

REAL progress is being made to provide New York City with an adequate live poultry market. In commenting on the situation, William Fellows Morgan, Jr., Commissioner of Markets for New York City, points out that work was held up in 1939 because the New York City Council failed to provide funds for the project. However, two sites were studied; one at the 60th Street Yards in Manhattan, the other on Newtown Creek, in Long Island City. It has been definitely decided that the new terminal will be in Long Island City.

The next step is to pass city legislation to permit the city to lease the property from the Pennsylvania Railroad and to give the Department of Markets the power to inspect all birds coming into the terminal. It is proposed that the city will sub-let the market area to a terminal operating company, to be financed by members of the trade or by private capital; and that an outside manager be employed to run the market.

Says Commissioner Morgan:

"The savings to be effected under this plan are obvious. The terminal company, for example, will be able to own and rent its own coops with a great saving to the trade, as well as buy feed in large quantities. Careful and adequate inspection at the terminal of all live poultry will improve the quality which the New York public buys. Rules and regulations laid down by this Department will insure honest weighing, and we will insist on the present old beam scales being discarded in favor of accurate automatic dial scales. The hours set for the transaction of business will eliminate the ridiculous overtime charges which the industry pays today for labor because of the early hours at which the poultry markets are opened in the morning and the late hours in the afternoon. This condition is due entirely to competition, which under present conditions the industry itself cannot remedy.

"It is estimated that the present difference in the retail prices of about 8c per pound between dressed and live poultry will be at least cut in half—an annual saving of over five million dollars.

"We will welcome producer organizations renting space in the terminal from the terminal company in the event that it is felt that the farmer interest can best be served by distributing their own poultry to the buyers."

Professor James Rice has been most interested in plans for this live poultry terminal. Says he:

"A suitable terminal market in New

RICHFIELD HATCHERY, Box 20, RICHFIELD, PA.

John M. Lord, Casco, Maine.

York City, the live poultry center of the U. S. A., would immediately remove one of the most vicious rackets affecting the poultry industry and agriculture in general, which cannot be solved in any other manner. This is because the present live poultry marketing facilities in New York City are most primitive—literally way back in Colonial days of Little Old New York, in restricted narrow street areas inaccessible for train or truck arrival and departure, or at widely separated points. All this necessitates heavy expense for handling and, what is even worse, encourages vicious holdup strikes and makes law enforcement difficult, if not impossible, for the city, state or federal authorities."

While the Northeast is not primarily a poultry meat-producing area, nevertheless every economy and efficiency in handling poultry will be reflected in the returns to poultrymen for broilers and old hens, and from that point of view they are just as interested in an adequate poultry terminal as are poultrymen from other areas.

For Better Poultry Statistics

Last November there was introduced into the House of Representatives a bill commonly called the Coffee Bill. Introduced by Congressman Coffee of Nebraska, this bill proposes a poultry division in the Agricultural Marketing Service of the U. S. Department of Agriculture, whose job it would be to collect statistics on production, marketing and use of poultry and poultry products.

The bill is an outcome of requests by poultry organizations who for some years have felt that the available poultry statistics are woefully lacking, particularly in view of the importance of poultry, the income from which is a billion dollars a year.

At the present time the Agricultural Marketing Service is spending about \$175,000 a year on poultry work, but about \$60,000 of this is required for the administration of regulatory activities under the Packers and Stockyards Act. Considering the size of the job to be done, the balance of \$115,000 has been entirely too small, a condition which we hope will be remedied. If you favor the bill write your Senator and Representative at Washington.

Potato Ring-Rot

(Continued from Page 8)

ter this treatment if not planted immediately.

3. Use new or disinfected containers if there is any likelihood of bacteria being on them from previously diseased potatoes.

4. Disinfect machinery and storages if they have been used for diseased potatoes before.

5. Use caution in bringing in seed potatoes from outside sources.

6. Avoid overflow of surface water from other potato fields.

The above are some of the precautions to follow, the most important being USE OF DISEASE-FREE SEED. If farmers will familiarize themselves with ring-rot, be on the alert for its first appearance and adopt this one single practice of using disease-free seed there is great hope and belief that this potato disease can quickly be brought under control.

OWENE CHICKS AND SEXED DAY-OLD OR STARTED Pullets

OWENE OFFERS DOUBBLE SAVINGS New Low Prices Plus Special Discounts. Giant Scale Production—6,000,000 chicks in 1939 —enables OWENE to effect economies and give greatest values in 20 years' history.

More Eggs Should Be Eaten

(Continued from Page 20)

the two statements below made by two Chicago egg brokers in their news letters to the egg dealers and speculators who hire their services to trade for them on the Exchanges—"Should October eggs become available at around 17½ cents or lower, we would consider them an attractive long-term investment on the outlook. Based on the above price, it would result in a paying price of around 9c to 11c to producers in the major portions of the producing sections during the flush spring period.

"Late estimates of total United States production is two per cent over last year and consumption 11 per cent above a year ago. Increases in production are principally on the east and west coasts and specialized poultry farms. However, production in most other states is estimated to average lower. High feed costs relative to low egg prices have a tendency to cause closer culling of laying stocks since late reports indicate a levelling off of the increase in production that was noted in the past.

"Current January contracts, fresh and storage, and February fresh eggs may be largely influenced by weather and supplies; but present prices appear well discounted and seem to offer attractive trading opportunities. If winter weather continues for a protracted period, a good advance would not be unusual."

And the other egg broker:

"The larger receipts of fresh eggs accompanied by slow trade has resulted in a soft market for the close of the December egg deal. It is still problematical as to what will happen to January Refrigerators. It is still a weather proposition. The carryover into January will probably be around 500,000 cases against a five year average of 765,000 and 10 year average of 947,200 cases. The current feed ratio is 6.63 vs. 4.01 last year and a low year average of 4.50. Thus there is no encouragement for producers to feed freely. Frozen eggs are moving substantially better than last year.

"Thus the only missing ingredient for a good market is cold stormy weather. It comes sometimes in January. If it comes before the frequent 'January Thaw' then we could have a good market for Refrigerator Eggs before the close of the month.

"On January 2nd, October Refrigerator Eggs will be open for trading. I expect a lower opening than last year, maybe around 17-17½c. Under any normal conditions this would be extremely cheap for October eggs. I hope they are 17c or less."

"Gosh, Chief, we sure came close to that lamp post, didn't we?"

Hall's Chicks

Spring Styles

BY MRS. GRACE WATKINS HUCKETT

ALTHOUGH they try to avoid saying so, designers have yielded considerably to the military influence in this season's styles. There is a new consciousness of pockets, braids, buttons and embroideries and occasionally an officer's look in suit coats, due to military shoulders, necklines and giant pockets. Many jackets have double or triple breasted closings; others close with 16 or 18 buttons which come close up to the neck.

Where the useful three-piece suit is used, the undercoat is most often a cardigan coat with simple slit pockets, while the topcoat is the full-back swag-gery type either collarless or with small rolled lapel. Skirts flare at bottom, often having 6 to 8 gores.

Coats fall into two general classes, fitted and boxy. The soft dressmaker coat which wraps to the side often is waspwaisted, and its 8 to 24 gores give a gracefully flared skirt. There is a smoothness of line at back and side; new fullness appears in front. The reef-er coat is growing in importance and shows definite military influence in its molded line and high buttoned collar; there is also the straight coat which

hangs square from the shoulder line.

Sleeves tend toward simplicity, being narrow and fitted. Pockets, borrowed from wartime needs of Paris are large and roomy.

Sports coats appear in lovely pastel weaves, nub "garden" tweeds bright in color, plaids and monotoes in soft textures. Such coats are boxy with gracefully flared backs.

Fabrics are mainly lightweight and hard twisted. Twills are of unusual importance for dress coats and suits. For sports coats and suits, the fabrics are tweeds, herringbones, diagonals, garden nub tweeds, all-over lacey weaves, plaids and stripes in pastel colors, while for the classic sports coat the soft camel's hair fabrics are always good.

Black and navy rank first for dress coats, followed by crumpet, a rosy tan shade, albatross gray, Poilu blue, a light soft blue, rose dust, nubeige, pistachio green, and the dusty tones.

DRESS & COAT
3178
HAT - 2812

A new "shortie" coat promises to be popular. It is fingertip in length, boxy in appearance and has a vent back.

Jackets and skirts definitely belong to this season; even evening clothes are made up of jackets, blouses, skirt sweaters, etc. Blouses go everywhere—for suits, streetwear or evening. Jack-

ets are hiplength, slim fitted, long sleeved and can be used as extras if desired. Other lengths vary from waist to full length.

For casual all-day dresses, wool crepes with slight surface interest, sheer faille, woolens with indistinct

The New Garden

By Irene McDermott.

I let the housework go today —
With stacks of dishes in the sink!
My beds are still in disarray,
And now I'm tired—too tired to think.

But oh, I've had such glorious fun
With one small, towseled lad of six,
A hoe, a rake, warm springtime sun,
Wet earth, new seeds and little sticks!

The rows may not be very straight,
The seeds were scattered some, no
doubt.

They may come up a little late,
But I am certain they will sprout.

The faith he planted with each seed,
The loving pat with grimy hand,
No growing thing could fail to heed,
No seedling fail to understand.

Today in Aunt Janet's Garden

Up Bobs the Urge to Plant

THE URGE is getting so strong now that pretty soon I must start some seeds. My attempts at growing plants meet with varying degrees of success; yet I find that if I follow the good advice given me and don't get careless or in too big a hurry I can feel repaid for my efforts.

First of all I get the best seed that I can afford. Seed to be good must germinate reasonably well. Nowadays many seedsmen state on the package what percentage of germination can be expected. I would rather take their word for it than go to the trouble of testing the seed myself.

So far I have used in the seed flats a soil mixture of, roughly, 1 part good loam, 1 part sand and two parts leaf-mold. Finely granulated peatmoss might be used instead of the mold for any seeds except delphinium and violas, which would require a little lime added to the mixture. If I take the trouble to sterilize my soil I can enjoy better the business of growing plants, because I am troubled less by weeds and damping off of seedlings.

A common home method of sterilizing soil is to pour boiling water through the flats after they have been filled; then let dry before planting. Another is to stir 3 oz. of formaldehyde dust into the soil of a flat 18" x 14" x 3". This sterilizes soil, flats and seeds all in one operation, but it should be watered immediately after sowing—this is very important. Another way to sterilize the soil is to mix 2 teaspoonfuls of formalin with 8 or 10 teaspoonfuls of water. Mix into the soil thoroughly and let stand 24 hours

before sowing the seeds. Then water afterwards. Although baking soil in the oven will sterilize it, there is danger of its getting hot enough to damage the organic matter it contains.

I have never tried sowing seeds in pure sand, although I know some who do it successfully. While there is less danger of damping off, sand contains no nutriment and the seedlings must be transplanted when very small. I have not had experience with the chemical solutions myself, but they are recommended for use in such cases, making it possible to defer the transplanting until much later. However, last year I did coat my seed flats with a sprinkling of sand after the seeds were planted and thought that this helped to control damping off to a great extent.

I try to follow the rule of planting seed four times its depth. Small seeds I just press into the soil with a flat board. This pressing is important for all seeds so that the tiny rootlets may find encouragement as soon as they start.

Favorite Recipes

By AUNT JANET

SURPRISE the family some Saturday night with a dish of Spanish beans instead of the regular Boston baked beans. This dish has the advantage of being a complete meal when served with brown bread, milk for the children, and baked apples with whipped cream or top milk. Two tablespoons of pepper relish would substitute nicely for the small green pepper and pimento called for in the recipe.

Spanish Beans

1 pint navy beans	1/2 cup sliced celery
1 cup unstrained tomatoes	3 tablespoons molasses
1 small green pepper	1 teaspoon mustard
1 pimento	Salt
1 medium-sized onion	Pepper
	2/3 cup diced salt pork

After picking out discolored ones, soak beans overnight in cold water. In the morning cook them in the same water until skins split, or slip off. Then turn them into the beanpot or casserole, and add other ingredients. Mix all thoroughly and cook them, covered, in a fireless cooker or a slow oven, 250 to 300 degrees Fahrenheit, for about three hours.

* * *

FOR LUNCHEON or supper, a fish pudding is very satisfying. True, it has to be served the minute it is done. It simply will not bear waiting, but the family won't mind being ready exactly on time when there's fish pudding.

Fish Pudding

1 cup cooked fish (fresh or canned)	1 teaspoon chopped parsley
1/2 cup mashed potato	1/4 teaspoon salt
2 tablespoons butter	Pepper to taste
1/4 cup milk	1 egg

Flake the fish, removing skin and bones. Melt the butter, add potato, fish, well-beaten egg, milk and parsley; season to taste and stir the mixture over the fire for 3 or 4 minutes. Bake in a well-buttered mold in a moderate oven for 1/2 hour. Turn out on a dish, garnish with parsley and lemon. Serve with white sauce.

* * *

A SATISFYING pork dish and one having rather less fat than straight pork is:

Pork and Parsnip Stew

1 1/2 lbs. fresh pork	1 quart diced parsnips
1 large onion sliced	1 1/2 tps. salt
1 quart hot water	2 tbs. flour
	chopped parsley

Cut pork into small pieces and brown in its own fat. Add to this the onion and cook a few minutes longer. Add the water and simmer until the meat is almost tender. Then add parsnips and salt and cook for 15 to 20 minutes. Mix flour with a small quantity cold water, add to the meat and vegetables, and stir until stew is thickened. Sprinkle with chopped parsley and serve hot.

"I never must be company down-stairs. I hear mom calling pop 'dear!'"

The Night the Stars Fell

By C. A. STEPHENS

THIS STORY takes us back to the days when Jefferson and John Adams, but lately dead, were still a living memory, and the generous Marquis de Lafayette had just made his second famous visit to the United States.

Our prosperous America of today is but little like that pioneer America of 1827. The first subscriber to "The Youth's Companion," in our home county in Maine, is said to have sent in his name during September, 1837. But two numbers of the paper came up from Portland in a young farmer's pocket on the night of November 13, 1833.

That, as it chanced, was the night of the great meteoric storm which for a space of several hours beat on the continent of North America with wild, bright inclemency—and we may now think of those pioneer copies of our paper as mute, unconscious witnesses of the most startling phenomenon which white people had ever beheld on these shores.

Far less was then known of the nature, composition and periodicity of meteors than at present; and in many parts of the country this amazing star-shower was believed to be the portent, foretold in the Scriptures, of the immediate dissolution of the world.

At our Maine homestead we young people used now and then to hear our grandparents refer to it casually as "the night the stars fell." It served as a date to reckon time from. Grandmother, however, more commonly alluded to it as the "night of restitution," from certain curious moral as well as meteoric phenomena that were displayed on the part of some of the people living near by.

This occurred about forty-four years after the first farms in our township were cleared up. The old squire and grandmother were living there in the first heyday of ambitious young life. They were prospering well, raised large crops, and every fall had great loads of butter, cheese, pork and dressed poultry to send to Portland, then the nearest market where cash could be obtained for farm products.

Early in November that fall the old squire drove down to Portland with a load of Thanksgiving turkeys and chickens. Grandmother went with him for the sake of meeting her mother, Madam Pepperill from Connecticut who was visiting at Portland. Mother and daughter had not met for three years; for it was then a long, hard seven days' journey from Maine to Connecticut.

They stayed in Portland a week, which was rather longer than they should have done, for they had engaged a neighbor, young Jonathan Edwards, to look after things and do the farm chores for six days only. Jonathan wished to leave on the 13th.

Other anxieties were also weighing on their minds, anxieties connected with certain people living near the farm, whom grandmother used to speak of plaintively as "those Crowes." The "Crowes" were not Crow Indians, by any means, but a colony, or family, of disreputable white people whose name was Crow, or Crowe.

On a large brook about a mile from the farmhouse there was then a saw-mill, located on the farm lands, near which two small houses had been built to accommodate the millmen. Some five years before, the old squire had settled two brothers there, named Consider and Amma Crowe, in order to employ them at the mill.

From the outset, however, the Crowes proved worthless as laborers. Three other families of the same name

moved there the following year, and later still another Crowe family came, nobody quite knew when—altogether about thirty persons, and as idle, disorderly and thievish a crew as ever pestered a decent community.

What to do with them the old squire did not know. Of course, they were very poor people, with no place to go if turned out of the two houses. He and grandmother disliked to proceed to legal extremities with them. Besides, there was some doubt as to whether there was law enough in that small town to put them out, there were so many of them. For they were quarrelsome and known to be revengeful, as well as idle and thievish.

They fished a little in the brook, hunted a little, whined and begged around, and stole a great deal by night from the fields of corn and potatoes.

The Methodist minister, Elder Cumnor, had made a valiant effort to mend the morals of these degenerates by holding a series of revival meetings at the district schoolhouse, half a mile from the mill. There is no doubt that the elder preached vigorous doctrine, and held out little hope for the Crowes hereafter unless they speedily reformed. He more than hinted to them, too, that the day of the Lord might be close at hand. They were unpromising subjects for reformation; yet it is likely that the elder's exhortations produced some effect. The old squire and grandmother earnestly hoped so—otherwise they did not expect to find much left about the house or in the cellar when they got home from Portland!

It was in reality a two days' drive from Portland; but after setting off upon the morning of the 13th, and reflecting how long they had been gone, grandmother exclaimed:

"Let's get home tonight, Joe, if we can!"

"It's a long drive, Ruth," the old

squire said. "We would be out late. And there's no moon."

"Never mind if we are out late!" cried grandmother. "It will be a clear night."

So all day they rumbled on over the smooth, hard, frozen road, for as yet no snow had come. They had two good horses, fresh from a week's rest. By five o'clock that afternoon they reached the tavern at Ricker's Hill, where the great Poland Spring Hotel now stands. Here they had put up overnight on their way down; but now, after feeding the horses, resting them an hour, and getting supper themselves, they set off, and rumbled northward again, on the home-stretch.

The evening was cold and frosty, but grandmother was well wrapped in a marten cloak, and really enjoyed the night drive. So clear was the sky that the Milky Way spanned the heavens in a wide arch of creamy light; and in the north the Great Dipper turned slowly to westward as the evening wore on.

"I saw a star shoot then!" grandmother exclaimed presently. "And there goes another!" she cried, a moment or two later.

"We often see shooting stars at this time of year," the old squire said. "They are meteors."

"Where do you suppose they come from, Joe?"

"Some think they come from the moon," he replied, airing a theory then held by certain astronomers. "They think there are volcanoes on the moon, and that meteors are thrown out of them, thrown so far that they fall to the earth."

"Well, I hope they will not hit us. There goes another—and another—and, O Joe, what a big one!" she cried, an instant later. "Wasn't that a beauty? And see the long white trail of light it has left behind it!"

Before this streak of meteoric flame had faded three others flew almost simultaneously, then half a dozen more, and these were but the precursors of

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Born Today

They say 'tis old, this land —
That men have stood where I now stand,
Seeing the earth and all its show,
Centuries and centuries ago.

And yet somehow to me,
The rising sun — its brilliancy —
The hall of blue, so high, so deep,
The evening shadows' stealthy creep,
The stars, the moon, the wisps of white,
The heart-stirring breeze of spring-time night:

ALL — all these and glories more —
Were born today and not before!

—John W. Ruppert,
1112 Summit Ave.,
Seattle, Washington.

the almost continuous shower which soon set in that night. Within half an hour from the time when grandmother noticed the first one, as many as one every second flashed out in view. Soon the whole country stood forth revealed in the wild, uncanny illumination.

Grandmother sat in awed silence, as the horses trotted on; she now scarcely seconded the old squire's effort to converse.

"Joseph," she at last exclaimed, solemnly, "do you suppose this means the end of the world? You know what the Bible says about the stars falling then."

"No, Ruth," replied the old squire, reassuringly, "I do not. These are not the stars, not real stars. They are meteors—small bodies that fall to the earth. They often fall. Tonight there happens to be more of them than usual, that's all."

"Perhaps the Bible meant meteors, Joseph," grandmother remarked, her apprehensions far from being allayed. "They look like stars, and, oh, they are falling so fast. It may be the end, Joseph."

"I guess we shall find that the sun will rise about as usual tomorrow morning," the old squire said.

Many thousands of "stars" were now shooting at once. The road ahead was constantly lighted up by the confluent flashes. Presently a different kind of meteor appeared to hang suspended in the sky, near the pole star. As first seen, this stationary body looked to be about the size of the full moon. It continued to expand, however, till twenty times as large, but it grew less bright, at last resembling merely a pale phosphorescent gleam, and after ten minutes or more, faded from view.

Nearly all the meteors gave forth a flash of pure white light; but while they were watching this huge stationary fire-ball, a vivid red aerolite shot across the sky with great velocity, apparently flying very low. The horses shied and reared up, snorting at the sight or sound of this red meteor; and a few seconds after came a loud report. The old squire believed that this meteor fell clear through the atmosphere to the ground.

At farmhouses many of the people appeared to be awake and at the doors and windows, although it was now long past midnight.

Several times the passers-by were hailed by persons who asked if they

The Song of the Lazy Farmer

MY NEIGHBOR'S workin' in the shed a-fixin' up his tools, he said that spring will come first thing we know, and when it's here he wants to go and git his crops in on the dot; he'd git held up, as like as not, if ev'rything were not in shape, and tho with wire and with tape he'd patch, there'd be too much delay. He doesn't like to lose a day, and so he's keepin' busy now a-fixin' up each disk and plow. He says there ain't no work that pays so well, on these here winter days, as gittin' ev'rythin' in fix, then when spring comes there ain't no kicks about his tools a-givin' out, and so he spends ten hours about, each day with wrenches and with grease, I guess his toil will never cease.

I hate to git my fingers cold, when weather is like this I hold there's plenty time twixt now and spring, and so I sit right here, by jing, before the fire and warm my shin, then when it's warmer

I'll begin to worry 'bout the work outside, when there's less danger that my hide will freeze; just now instead I'll stay inside and use my head. I'll study bulletins and books and git right up to date, it looks as if in these here modern days, a feller has to watch his ways, for all this scientific stuff ain't none too much of it's enough, to meet the problems that we face if we'd make money off our place. The winter is the time to plan and think, I'm sure that any man who toils with never time to read, will let his mind all go to seed; he's got to read and understand to make a profit off his land.

knew what to think of the tremendous spectacle. "The world's afire!" one man shouted, excitedly.

At one house they heard voices singing a hymn; and at another the people seemed to be at prayer. At yet another place the farmer was out attempting to drive a flock of sheep into his barn—as if afraid the animals would be struck by the falling stars.

When at last they reached the home neighborhood all was dark and quiet at the farmhouses of the Tibbetts and Batchelders. Both these families, as was learned the next day, slept placidly through all!

While passing the schoolhouse, however, they heard a confused sound of many voices over in the direction of the sawmill.

"It's those Crowes!" grandmother exclaimed. "They're awake!"

"Yes," the old squire remarked, dryly. "They would be likely to be. Night is their time for working."

They pulled up for a moment to listen. "That doesn't sound quite like the usual quarreling over there," grandmother remarked. "Seems more like crying."

"Sidder, perhaps, has driven his wife out-of-doors again," the old squire said.

They drove on home and put up their team. There was no need for a lantern; the continuous glare of the star-shower lighted up both the yard and barns. Grandmother then got the house key from the secret nook, where by agreement with Jonathan it was to be kept; and going in they kindled a fire and warmed themselves.

It was now after two o'clock in the morning, but no lamp was needed. Grandmother could see sufficiently to go about the house and made a pannikin of "ginger tea." The portentous spectacle outside quite deprived them of any desire for sleep. They sat down by the sitting-room windows and watched the progress of the shower. The old squire took up a book, to show that he could read by the light of the falling stars.

Soon after, from her seat by the window, grandmother saw several persons entering the yard.

"Here's some one coming!" she whispered. "Three of them. Look, Joseph! They're bringing something in their arms!"

From the unlighted windows they could see three persons hastening up to the piazza of the farmhouse, bearing burdens of some kind. One of the three was a woman, who appeared to be sobbing.

"That's Sidder's wife, Calista Crowe," grandmother whispered. "What is it that she's got?"

The woman stole forward, and they heard her set down some heavy object on the piazza floor.

Then for the first time that night grandmother was near laughing outright.

"Joe," she whispered, "do you see what that is? That is my old dye-pot! Calista Crowe's brought it back!"

The old squire, however, was watching the movements of the two men, who also skulked forward and threw down several sheep pelts, then slunk away.

These penitents proved but the advance-guard of a more numerous detachment of Crowes that came straggling on behind them, each and all loaded with something or other previously stolen from the farm. Lorena Crowe, Amma's wife, had a great bundle of white clothes,—the result of many nocturnal raids on grandmother's clothes-line,—while behind her came Amma Junior, boohooing lustily. This youngster was bringing home an ax and a hoe which the old squire had missed the previous spring.

Several tin pans, a brass kettle, a flail, a sap-yoke, three piggins, num-

Bread

By Inez George Gridley.

There is an ancient magic in the hands That knead and shape a loaf of bread; They keep the skill that some of us have lost

Who search for softer ways instead.

There still are places where the kettle steams

And crusty loaves lie brown and sweet, While in the corner Granny sits, serene, Content to rest her weary feet.

And everyone whose friendly kitchen blooms

With eager children to be fed, Lives closer to the heart and core of things. . . .

Give us this day our daily bread.

erous hanks of stocking-yarn, in fact, a multiplicity of things now arrived.

The Crowes did not know that the old squire and grandmother had returned, and despite the solemnity of

the occasion, the watchers could not but feel greatly amused. If the last day was at hand, these wretched people plainly did not wish to be found with all that pilfered property about them.

Elder Cumnor's exhortations had perhaps quickened their consciences. Repentance inspired by fright may be better than none, but the effects are not likely to be enduring; and a strict regard for the facts compels me to say that when they found the great day had not come, the Crowes soon relapsed into their former modes of life, and had finally to be dealt with in a different way.

For, as needs hardly be said here, the sun rose quite as usual the next day, and nature pursued her usual courses.

In the early light of morning, however, the farmhouse piazza presented a truly remarkable appearance; and to the end of her long life grandmother was wont to refer to this memorable night as the "night of restitution."

Personal Problems

Let Her Invite Him

Dear Lucile: My daughter and I are having an argument which we want you to help us solve. Her class is having a party and the girls are to invite their escorts for the evening. I claim I do not want my daughter to do such a thing; I still believe the boys should invite the girls to such affairs. Do you think this is right? My daughter calls me an "old fogey."—*Behind-the-Times.*

I almost agree with your daughter. You are placing too much importance on this matter. No doubt this is just a class stunt—a Leap-Year party—and entirely all right. It is done in many schools, once in awhile, just to vary the order of things. Don't spoil your daughter's fun, or make her do differently from what the other girls do.

Consider the Husband

Dear Lucile: I have been married over six years and have one child. I married a man I did not love just to spite someone else. I thought I would try to make a go of it, but my heart is not in my job.

My husband is a good man, but is awfully dumb in some ways. He is not one to be shown, either, as he is very stubborn. I feel that I am making his life miserable, as I think he would be happier away from me for I'm always complaining over my lot in life.

Would it be an injustice to my child if I should leave him? Must I go on tied to him to the end, or should I call it quits? I think I have killed all the love he had for me by the way I treated him.

Please advise me as I'm very unhappy, but want to try to do the right thing toward my child.—*Disillusioned Wife.*

I hope that every girl who is tempted to marry for spite will read this letter. Why women will do this, I don't know; in a harsh moment of wanting to "get even" with a man who has let you down, or a girl friend who has married before you did, or who wants the particular young man that you can get by crooking

your little finger, you take this serious step that puts you in hot water for the rest of your life.

Once the die is cast, however, I think a woman should stick to her guns and try to make the best of her bad bargain. She owes it to the unsuspecting man she has duped to try to make him happy. Any children coming to such a union should certainly be shielded from knowledge that it is a loveless marriage. That is a challenge to any woman; too many fail to meet it and innocent children grow up in atmospheres of hate and suspicion and constant disagreement.

I should like to ask "Disillusioned Wife" whether she has considered her husband's feelings. Is his love for you really dead? Most important—does he not love your child and is it fair to him to deprive him of its companionship and love? Another point—you've lived with this man six years; are you sure you'd find happiness, now, to break up your home and start out "on your own". Things would not be as they were before you made this unwise marriage, you know.

I think you should stick it out and make the best of your situation, unless your husband indicates by every action and attitude that he hates you and would, indeed, be happier without you. In such a case, I do not think a home should be held together, whether there are children or not. A child brought up in such an atmosphere may sustain lasting injuries to character and temperament. But, before you make any moves, sit down and face the thing squarely. Decide if you have done all you could to make a wrong, right—and give your baby and your husband whom you fooled, and his feelings, first consideration.

To Give the Bride Away

Dear Lucile: I am going to be married in the spring, and want a church wedding. What bothers me is that I have no one to give me away. My father is dead, I have no brothers and only one uncle who lives a thousand miles away and with whom I am barely acquainted.

However, there is a neighbor man who is very dear to me; he has been sort of guardian and I have loved him since I was a little girl. Would it be all right for him to give me away?—*Bride-to-Be.*

Yes. Legal guardians often act in this capacity. This loved friend may officiate as well.

IF NOSE "FILLS UP" AT NIGHT

Here's One Successful Way To Get Welcome Relief

IF YOUR NOSE gives you a lot of trouble at night—fills up, makes breathing difficult, spoils sleep—just put a few drops of Va-tro-nol up each nostril.

RESULTS ARE SO surprisingly good because Va-tro-nol is expressly designed to relieve distress in the nose and upper throat, where transient congestion hinders free breathing. Enjoy the comfort Vicks Va-tro-nol brings... tonight!

For Joyful Cough Relief, Try This Home Mixture

Saves Good Money. No Cooking.

This splendid recipe is used by millions every year, because it makes such a dependable, effective remedy for coughs due to colds. It's so easy to mix—a child could do it.

From any druggist, get 2½ ounces of Pinex, a compound containing Norway Pine and palatable guaiacol, in concentrated form, well-known for its soothing effect on throat and bronchial membranes.

Then make a syrup by stirring two cups of granulated sugar and one cup of water a few moments, until dissolved. It's no trouble at all, and takes but a moment. No cooking needed.

Put the Pinex into a pint bottle and add your syrup. This makes a full pint of cough remedy, very effective and quick-acting, and you get about four times as much for your money. It never spoils, and is very pleasant in taste.

You'll be amazed by the way it takes hold of coughs, giving you quick relief. It loosens the phlegm, soothes the irritated membranes, and helps clear the air passages. Money refunded if it doesn't please you in every way.

"I'd just like to smell kind of sweet without luring anybody."

Milk Market News

THE UNIFORM milk price for January as announced by Administrator Harmon is \$2.14 a hundred for 3.5 milk in the 201-210 mile zone. This is 2c less than the December price, but is 26c a hundred more than the January 1939 price. Comparing the price with a year ago, it is important to remember that compliance with the Federal-State Milk Marketing Order is much better than it was then.

Another exceedingly important point to keep in mind is that the amount of milk involved in the January price is nearly 20,000,000 pounds greater than in December 1939, and 27,500,000 pounds more than in January a year ago, representing an increase of 6.9 per cent.

It may seem to producers that they are getting a base price of \$2.14 a hundred for this increased production, but such is not the case. They are really getting surplus prices for any increase in production, which means somewhere around \$1.25. Dairymen have been free to admit that they cannot make money producing milk at that price, and continued production increases will certainly interfere seriously with the smooth functioning of the Order.

Class prices on which the January uniform price was based are: Class I (fluid milk), \$2.82; Class 2-A (fluid cream), \$2.05; Class 2-B, \$2.006; Class 3-A, \$1.606; Class 3-B, \$1.670; Class 3-C, \$1.270; Class 3-D, \$1.245; Class 4-A, \$1.17; Class 4-B, \$1.265.

Adler Creamery Ordered to Pay

Federal Judge Frederick Bryant at Syracuse on February 12 ordered Adler Creamery, Inc., of New York City to pay sums due into the producers' settlement fund. The firm was instructed to pay \$10,690, plus interest, in ten days, and to make nine monthly payments of \$4,000. The order was a result of court action by the Federal Government calling on the Adler Company to show cause why it should not be held in contempt of court because it did not pay to Market Administrator Harmon the sum of \$46,690 which was due. The case was started last July.

Mayor's Proposals Will Cost Money

Charles Baldwin, Executive Secretary of the Metropolitan Cooperative Milk Producers' Bargaining Agency, warns that the retail price of milk will have to be raised at least 1c a quart to 87 per cent of consumers in the metropolitan area if Mayor LaGuardia is successful in putting into effect his proposed rules and regulations governing production. These proposals include: a reduction in the degree at which milk must be cooled, additional caps for bottles, and some other points.

Mr. Baldwin points out that these rules mean additional cost to both producers and distributors. For example, cooling milk to 55 degrees F. instead of 60 degrees will, in some cases, mean new machinery and, in others, additional ice, and may also mean some changes in transportation to market.

He also suggested that the Mayor's proposal to compel all new dairies approved for New York City to pledge themselves to send at least 60 per cent of the total milk they handle to New York might tend to create a greater surplus there and aggravate a situation already serious.

Proposed Amendments to Market Order

When the price amendment to the Marketing Order was put into effect, promise was given that other proposed amendments would be considered. This has been done, and a public hearing to receive evidence on the proposed

changes to the Marketing Order is being held at 10:00 A. M. Eastern Standard Time, February 29, at the Hotel McAlpin, New York City. The hearing is too late to report results in this issue.

The principal changes being discussed are:

1. The addition of some counties to the "New York Milk Shed" or "special cream area."
2. The revision of prices for various classes of milk. These revisions are intended to prevent a serious drop in price when the present price amend-

BY L. B. SKEFFINGTON

from SKEFF'S NOTEBOOK

SOME boy or girl with good ideas about marketing New York farm produce is going to win a top award of \$100, offered by the H. S. Duncan Memorial Fund. In addition, the regular cash award and certificates of merit will be presented this year as usual. Last year the committee drew upon its capital to make loans to two senior students at Cornell University, and this year the committee will be able to assist at least three students.

The fund was established three years ago as a "living memorial" to H. S. Duncan, originator and, until his death in 1935, director of the Farm Produce Inspection Service of the State Department of Agriculture and Markets. The fund was subscribed privately by friends of "H. S." Annual awards have been made since that time, the awards to juniors being a new venture which the committee hopes will become a fixture.

Senior students in marketing subjects who may be interested in obtaining loans may contact Dr. M. P. Rasmussen or Prof. Paul Work at the State College of Agriculture, at Ithaca, N. Y.

Rules for the junior award this year are not yet available. A committee to suggest them includes Halsey B. Knapp, director of the State Institute of Applied Agriculture, Farmingdale; Dr. W. J. Wright, state junior extension leader; Dr. Arthur Pratt, Cornell; W. J. Weaver, State Department of

ment expires May 1. The principal change substitutes a schedule of evaporated milk prices for the present butter schedule, to be used as the basis for the Class I price.

3. The addition of a skim milk differential. This will require dealers, whenever the value of dry skim milk is over 5c a pound, to pay to producers a differential of 4c a hundred for skim milk for each ½c by which dry skim price exceeds 5c a pound.

4. Changes in the provisions relating to Grade A payments, payments to cooperative associations, payments for market services, and payments to and from the producers' settlement fund. The proposed changes in market service payments are designed to prevent unreasonable payments to dealers for diverting milk between plants owned by the same concern, and to prevent the diversion of milk to plants located at unusually long distances.

A very important addition is the requirement that each handler shall pay into the producers' settlement fund for weekly periods rather than monthly, and that payments shall be made on or before the 11th, 18th and 25th of each month and 4th day of the succeeding month. If this becomes effective, it will prevent dealers from getting far behind in their payments into the fund.

Copies of the proposed Order as amended can be secured from the Hearing Clerk, Office of the Solicitor, U. S. Department of Agriculture, Room 0310, South Building, Washington, D. C.

It is the responsibility of Secretary Wallace and Commissioner Noyes to determine from the evidence at the hearing whether or not the amendments should be submitted to producers for a vote. If the decision is in the affirmative, it is expected that the vote will be taken soon and that it will be taken by mail.

Education; Butler Dewsy, Syracuse, president of State Junior Vegetable Growers' Association, and Carl Wooster, Union Hill, president of the State 4-H Federation.

Waltermire New Chairman

Kenneth Waltermire of Chatham was elected chairman at the annual meeting of the Duncan fund trustees, succeeding Earl D. Merrill of Webster. Herbert P. King, president of the State Farm Bureau Federation, was named chairman of the committee of award. W. J. Birdsall, Albany, was re-elected registrar of awards, and J. Franklin Bonner, Churchville, secretary. Leslie Stutzman, Rochester, was named assistant secretary.

New Storage Method Amazes

Farm and Home Week visitors at Cornell saw an amazing demonstration of new methods in storing fruit. The "modified atmosphere", or gas method of storage, has been talked about for some time, but comparatively few persons know much about it. The secret is controlled atmosphere with just the right parts of carbon dioxide and oxygen. The carbon dioxide gas is given off by the apples themselves.

Ordinarily in storage this gas is lost, or it is not in just the right proportion with oxygen. The difference between ordinary cold storage and storage by the new method is this: Apples are placed in cold storage and the tem-

perature reduced to a low point to arrest the life action within the apple. The modified atmosphere, in effect, does not arrest but actually suspends life action.

Growers and storage men know that if storage temperature is too low, certain injuries may develop and scald may be hastened when they leave storage. In the modified atmosphere experiments at Cornell, apples were stored at 40 degrees. After being kept in a warm room—75 degrees,—for 10 days they showed no sign of scald, breakdown or rot. Under ordinary conditions almost anyone knows what happens to apples when they stand in a grocer's warm store for a week.

Cling to Tree Longer

Along with this development, work is going forward with a new hormone spray which makes the apples stay on the trees later. Most growers like to leave the fruit on the trees long enough to get good color, but are fearful that if they leave them on to mature fully they will drop and bruise. The new spray develops the stem tissue and hold the fruit longer.

These developments show what is being done at Cornell to enable growers to solve a serious marketing problem.

Spring Styles

(Continued from Page 24)

ribs, and soft spongy crepes dominate the fashion family as far as materials are concerned. Other materials are rabbit's hair, rayon jerseys in stripes, checks and solid colors, plaids, taffetas, crepes and prints. Printed crepes are perfect for the shirtmaker and jacket dresses, in companion or mated fabrics and made to go together.

As for dress colors, navy or black with light colored contrast lead. Again we have the military note—red, white and blue are very good. Then come navy and the family of blues, followed by gray or beige and the reds, melons, oranges, royal blues, ruby wine and the saddle tones which range from rosy tinted to chocolaty coffee shades. Pastels, formerly summer colors, liven up the spring season. Blouses tend to appear in bon-bon colors which blend or contrast well with each other.

Dress woollens too are mated, combining pattern with plain; smooth with tweeds; stripes with checks. Dress silks must be adaptable to shirring and draping. Crepes, failles, mossy silks, jerseys, monotones and prints pretty well make up the list. Prints show carefully spaced designs, small patterns which highlight the backgrounds and color.

Skirts are shorter than ever. They are tucked, shirred or pleated, usually 16" to 17" from the floor. Shoulders are soft and slightly extended. Sleeves vary in length. Necklines are young.

In the casual dress, the lines of the back continue to shir into clinging folds from yoke to waist and from waist down. Sleeves are full, oftentimes being the bishop type which gathers into a tight wristband. Waistbands rather than separate belts are used. Buttons abound everywhere.

The figure is more normal. The waistline is slim, naturally placed, with high, close fitting V or sweetheart necklines. Sleeves of dressy dresses are short, three-quarter or semi-full caught in tightly at the wrist. Fullness of skirts, 14" to 16" from floor, is an essential detail. This is achieved by gores and pleats pressed or unpressed.

Hats are waspwaisted too. Brims are wider in front than in back. Sailors show a forward movement in brims and have tricky edgings. Berets are small with Watteau effect and have soft cushioned edges. Pillboxes are still with us but with heavy cuff and rolled lines. Others are turbans from the Argentine and Brazil and plenty of beautiful straw braids. Trims are an abundance of veils and flowers on everything—on hats, in buttonholes and as clips.

Jewelry is more restrained — more tailored than last season. Lapel gadgets abound. Bracelets appear in new

"Can't you give me a demonstration some other time? This is my cleaning day!"

shades and shapes. Bags are soft, roomy, tailored, dressmaker or sports to go with the rest of the outfit. Gloves are longer and plainer, yet more colorful than ever.

Patterns illustrated on page 24 were all chosen because they combine outstanding style features with usefulness for everyday living.

SLIM PRINCESS DRESS NO. 3172 is distinguished by pussycat bow and pegtop pockets, sizes 12 to 20. Size 16 requires 3¾ yards of 39-inch material, ¼ yard 35-inch contrasting. Hat and bag set No. 3144, one size adaptable to any headsize, must be ordered separately.

BUTTON-FRONT FROCK NO. 3118 displays fashionable full skirt and sleeve and waist shirrings. Sizes 12 to 40. Size 16 requires 4¼ yards of 39-inch material, ¾ yard 39-inch contrasting, 2½ yards lace edging. Hat Pattern No. 3144, one size, adaptable to any headsize, must be ordered separately.

BIG POCKET DRESS NO. 3187 is grand for handy all-day wear. Sizes 14 to 48. Size 36 requires 3¾ yards of 39-inch material.

ALL-OCCASION TWO-PIECE DRESS NO. 3157 has waist-whittling jacket and gently flared skirt; make of mating fabrics—mate the turban too—pattern included. Dress sizes 12 to 40. Size 16 requires 4½ yards of 39-inch material for dress and turban.

MATRON'S REDINGOTE DRESS NO. 3190 is softly slenderizing, yet very, very stylish; sizes 16 to 48. Size 36 requires 4¼ yards of 39-inch material, 1 yard 39-inch contrasting.

CHILD'S COAT AND DRESS NO. 3178—2 patterns in one, is right in style with princess line and ice-cream cone pockets. Sizes 2 to 8. Size 4 requires 1¾ yards of 39-inch material, 3 yards binding for dress; 1¼ yards 54-inch material, 1¼ yards 35-inch lining for coat. Hat pattern No. 2812 sizes 2 to 10 years, must be ordered separately.

GIRL'S TWO-PIECE DRESS NO. 3171—excellent for the in-between age—brings another big chance to use companion or mated fabrics. Sizes 8 to 14. Size 8 requires 1½ yards of 39-inch material for blouse; 1½ yards 39-inch or 54-inch material for skirt; ½ yard 39-inch bodice lining.

TO ORDER: Write name, address and pattern size and number clearly and enclose 15c in stamps. Address Pattern Department, *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new Spring Fashion Catalog.

Name Game

Hidden as well as possible in the columns of our last issue were the names and addresses of twelve subscribers of *American Agriculturist*. We announced that anyone who found his name and sent it in before Feb. 24 would receive a check for \$1.

As this is written, ten subscribers have found their names. They are: Dwight Clark, East Montpelier, Vt.; Grant H. Halsey, Groton, N. Y.; Martin Sturm, 27 Anderson Avenue, Falconer, N. Y.; C. N. Stanton, Sussex, N. J.; John H. Walton, Palmyra, N. Y.; John McDonald, R. 2, Walton, N. Y.; Thomas Kane, R D. 1, Painted Post, N. Y.; Harry Stevens, R. 7, Bangor, Maine; Frank W. Lord, Farmingham, N. H.; Martha Doyle, Monticello, N. Y. We sent each one a dollar, with our congratulations.

The purpose of this little contest is to make a little fun and perhaps profit for you, and to encourage more careful reading of the good things both in our editorial and advertising columns.

In this issue are several more names and addresses of subscribers, taken at random from our subscription list. If you find and send in your name before March 9 you will receive a check for \$1.

GET MORE PROTECTION WITH THIS NEW POLICY

COSTS \$2.00 A YEAR

THE ACCIDENTS WHICH THIS POLICY COVERS ARE

1. By the wrecking or disablement of a pleasure type automobile, an automobile truck, a horse drawn wagon, cart, sleigh, or sled, in which the insured is riding or driving.
2. By the wrecking or disablement of a public conveyance provided by common carrier for passenger service only (aeroplanes excluded) within which the Insured is riding as a fare-paying passenger in the place regularly provided for passenger service.
3. By being struck, knocked down, or run over while walking or standing on a public street, public sidewalk or public highway by a moving vehicle.

CASH BENEFITS PAID AS FOLLOWS:

1. \$1,000.00 for loss of Life, or the loss of the sight of both Eyes; or the loss of any two members, such as a Hand or Foot.
2. \$500.00 for loss of the sight of Eye, or Hand, or Foot — Loss of Life or Member must occur within 30 days from the date of accident, otherwise weekly benefits are paid.
3. \$10.00 a week for as many as thirteen weeks while totally disabled unable to do any work whatsoever — benefits beginning immediately following the accident. No benefits are payable for partial disability.

This protection applies on accidents happening anywhere within the United States or Canada. Death benefits are payable to the insured's estate, all other benefits payable to the insured.

These benefits are paid where the insured is between the ages of 15-59 years. One-half benefits are paid ages 10-15 and ages 60-74.

WHO CAN HAVE THIS POLICY

This policy is available to anyone who is not crippled or who has not lost the sight of either eye or limb — the policy does not provide indemnity if the insured is under the influence of intoxicants, nor does it cover a watchman, law enforcement officer, volunteer or paid fireman, or railroad employee while on duty.

OUR GUARANTEE

Each policy is sold with a money back guarantee. After you receive your policy you have 5 days to look it over and if it is not satisfactory, return it and it will be cancelled and your money refunded at once.

Mail your application to:

North American Accident Insurance Co.

N. A. Associates Department

10 North Cherry Street,

Poughkeepsie, New York.

I do hereby apply for a North American Accident Insurance Policy, Series 416, which costs \$2.00 a year, and understand that I can carry this new policy in the place of the \$1.00 or \$1.25 policy, but not in addition to it.

Kernels, Screenings and Chaff

By H. E. BABCOCK.

EDITOR Ed Eastman is going to be surprised when he gets my copy for this page. It will be a week early, but there is a reason. Just as soon as I can get a few jobs cleaned up I am pulling out for the State of New Mexico.

To be exact, for Roswell, New Mexico, where I am going to confer with the superintendent of a 1500-acre farm on his major problem of making the farm return something on the investment in it and his minor problems of growing cotton, maize, and alfalfa, feeding range lambs, and raising mule colts.

I AM NO EXPERT

It isn't that I expect to contribute much to the solution of the problem of how to make a farm pay, either in the Northeast or the Southwest, but I do expect to learn something about the property and possibly by putting our two heads together the superintendent and I can figure out how to increase income here and cut expenses there.

A FIRST-HAND REPORT

This announcement is made because I am going to try the stunt of writing my next page while I am in the Southwest and to the best of my ability to give the readers of Kernels, Screenings and Chaff a picture of an entirely different agriculture from anything we have up here in the Northeast. I am taking my camera along in hopes of getting a few good pictures so that you may see some of the things I see and either profit or be entertained thereby.

* * *

Crossbred Pullets

Our September-hatched crossbred pullets are beginning to lay. There are about 1000 of them. These pullets look like Plymouth Rocks. They are the result of crossing Plymouth Rock roosters with Red hens.

From our experience with these fall-hatched pullets we have come to the conclusion that September is too late to start them. Before they were old enough to "take it", we ran into cold weather, which increased our expense for fuel. Then, when we finally let the stoves go out, we had difficulty keeping the litter in the brooder houses dry.

Finally, there were periods when the weather was sour and cold for as much as a week or two when these birds did not seem to grow at all, although they consumed a lot of feed. Just before they started to come into production we lost about four per cent of the flock with paralysis. I am inclined to believe that our losses from this disease will be considerably higher before we finally sell these birds for meat. This is the first paralysis to speak of which has shown up in our young birds for a couple of years.

We have also had in this flock quite a few birds which did not develop at all. These "duds", as we call them, seem to show up quite frequently in the crossbred birds we have been buying. We have been very careful to give the flocks plenty of space, so I feel pretty

In one corner, Hitler the Hog. In the other, Jack the Jackass, ready for their battle for the championship of the SunnYGables barnyard, which as previously reported, Jack won in the first minute of the first round.

(Left): With the issue of who is boss settled, Hitler and Jack are now good friends once more.

sure that the duds are not a result of flock competition but that they missed something from their inheritance.

We have no intention of discontinuing the raising of crossbred hens, but if we raise any next fall we will start them earlier—perhaps as early as July, in which case they would not be fall birds at all.

We have 1200 beautiful Leghorn chicks, started the first of February, which are doing splendidly. Like all poultrymen, we are hoping that egg prices will be good enough from July on so that there will be a little money made from early-hatched flocks.

* * *

Not So Good

For several years our hog account at SunnYGables has shown up nicely. It isn't going to be good in 1940, however. We went into the year with a good bunch of shoats on hand and with four brood sows and a boar.

The shoats have done well and they will be ready to sell by the time our spring pigs—which are about due—are ready for their quarters. From the way the market looks, however, the shoats are not going to bring much return. They have been entirely fattened on home-grown grain, however, so that we won't feel the low price so keenly as we would had we bought what they have eaten.

One of the four brood sows we kept over failed to breed, so we shall have only three litters of pigs this spring. This is enough under the circumstances. We will breed these three sows for fall pigs and then plan on selling them. Sometime this summer, while hogs are cheap, we shall pick up a half dozen sows and a new boar—the sows to con-

stitute our source of pigs for the next few years and to be bred to produce their first litters the last part of February 1941.

We find that we can maintain a herd of brood sows with very little cash outlay by pasturing them on clover during the open season and feeding them grass silage and a very little grain in the winter. This diet shows results in very good sized litters of strong pigs.

* * *

Standardized Wheels

We have begun a program of putting all our farm equipment on standardized wheels which will take a second-hand 6.00-16 tire.

It may be two or three years before

we accomplish this objective but our experience with rubber-mounted, horse-drawn equipment to date convinces us that the program we have undertaken is sound; that it will save a lot of horse power, and that it will also relieve our men of a lot of wear and tear.

* * *

Dehorned Heifers

I got a lot of replies to my request for help in dealing with mean horned heifers.

The advice I got all boiled down to removing the horns. Various methods of eliminating the horns were, of course, suggested. Some would not let them grow at all; others would cut them off this way and that.

Our trouble at SunnYGables, however, is that the people who come there to buy purebred Guernsey heifers seem to like animals with a nice pair of horns, so it looks as though we would have to struggle along with our problem and probably continue to run the risk of occasionally having an animal injured.

What I had hoped for was that someone would come across with an idea of sensitizing an animal's horns to a point where it would not care about hitting anything with them.

A "Century" Farm

THE FARM of Howard H. Utter, located on the Geneva Turnpike, near Geneva, N. Y., was recently presented a citation as a century farm. The original owner was Israel Webster, who walked from New Hampshire to Ontario County and located on this farm which has been in the Webster family since. Eugene Webster is the last of the generation to live on the farm. He resides with his son-in-law, Howard Utter, who operates the farm.

Here is Eugene Webster with his grandchildren, David, 7, and Jean Utter, 4, as he reads the history of the farm in the citation. Both Mr. and Mrs. Webster have long been affiliated with grange work. They are members of Castle Grange, Seneca Castle.—From M. D. Connors, Stanley, N. Y.

Fake Movie Talent Scouts

THE HEADS of Hollywood motion picture concerns charge that fake "movie talent" scouts have swindled unsuspecting people in rural areas out of thousands of dollars. This type of swindler drops into a small town, spreads the story that he is looking for new talent for the movies, and eventually picks out several girls in their teens as his victims. Local beauty contest winners are often susceptible to such flattery. After the build-up, the girl or her parents find that it is necessary to advance money for a screen test. These advance fees, of course, are the sole source of income of the swindler, but the false hope of a successful career often causes parents to "come across."

Only occasionally, we are told, do real talent scouts leave Hollywood, and never do they go to rural areas.

If a so-called "movie talent" scout should turn up in your community, it is a simple matter to handle the situation. Just call the police or State Troopers. In at least one case a self-styled scout received \$10.00 each from 127 fond parents when he promised to present pictures of their infant prodigies to Hollywood picture producers, claimed to be looking for child actors!

Brush Along the Highway

What is the law in New York State relative to cutting brush along the highway?

This question was referred to the State Division of Highways, and Commissioner H. O. Schermerhorn replies as follows:

"The Superintendent of Public Works may cause noxious weeds, briars and brush growing within the bounds of the state highways to be cut and removed, and the cost thereof shall be paid from funds as now provided under Section 262 of the Highway Law—that is to say, appropriations by the state for the maintenance, repair and reconstruction of state highways and state owned bridges thereon.

"The county superintendent shall cause noxious weeds, briars and brush growing within the bounds of county roads and town highways improved by county aid to be cut and removed between July 15 and August 15, and as many other times as he may deem necessary in each year.

"The town superintendent may cause briars, brush and noxious weeds grow-

ing within the bounds of town highways to be cut and removed between July 15 and August 15, and as many other times as he may deem necessary in each year."

Claim is Good

"I shipped 4 dogs to a Pet Shop where I had previous dealings. I had always been paid c.o.d. but this time the proprietor asked for ten days credit. After a few days the pet shop owner complained that the pups were sick and later sent me back the papers for two which he said died. I guarantee to replace any pups sent back to me dead within ten days of arrival. I have never received any pay."

We are attempting to make a collection on this deal. There is no question but that the subscriber has lived up to her guarantee. We can not help wondering what success a customer would have if he wanted his money back on a dog purchased from the Pet Shop and which died after he was purchased. We suspect he would not get very far and the Pet Shop has no more reason for trying to avoid payment to our subscriber.

Out of Business

"On May 23, 1939, I sent to Harry Wood Cobb of Ridgewood, New Jersey, for 150 turkey poulters for which I sent my check for \$60 in full payment. I waited and waited for the birds to come but they failed to arrive, nor did I get a refund. I have written and written him but still have no money. I have received two letters not dated and unsigned merely headed 'Statement to our Creditors.' Can you help me get my money back—that money simply has to be made up and I am in no way able to meet it."

Back in 1937 Mr. Cobb was denied use of the mail. At that time he owed considerable money on unfilled orders which he promised to take care of. Several of our subscribers received notes which as far as I know, were never paid. Our last letter to Cobb was returned. Our record of complaints against Mr. Cobb goes back for several years.

A Fantastic Tale

A Maine subscriber sends a letter which he recently received from Mexico. The letter is a mimeographed one indicating that it has gone out to a large number of people. Its author reports that he is in a Mexican jail but that he has \$185,000 of U. S. money, well hidden in a trunk which is in an American Customs House, but which he cannot recover until he gets out of jail. The writer asks our subscriber to pay the expenses of his trial, and promises one-third of the hidden money as a reward.

Naturally our subscriber does not intend to throw money away by accepting the offer. To say the least the story is a fantastic one. Sounds like a revised version of the old "Spanish prisoner" story.

Experience Is a Good Teacher

Most of us, some time in our lives, have fallen for a proposition and later regretted it. Perhaps it wasn't an out and out swindle, or maybe it was. If you fall in this class, you naturally are not anxious to broadcast the story; yet your experience may save some other subscriber from a similar loss.

At any rate, this Department will pay \$2.00 each for stories of such experiences that we are able to use. We will not print your full name and address. Keep your story to 500 words or less, and send it to Service Bureau, Box 367, Ithaca, N. Y.

The Policyholder Injured in this Accident Writes:

"On June 17th, I took out a policy in the North American Accident Insurance Company through your local agent, Mr. A. L. Brown. On July 6th, I was injured in an automobile accident. On October 18th, I received the Company's draft in full settlement of my claim amounting to \$114.28.

"I wish to thank you for the prompt and satisfactory way you adjusted my claim."

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

THE G.L.F. PAGE

The basis of a sound business cooperative is voluntary use by fully informed patrons

Geography and Fertilizer

There is no other fertilizer distribution system quite like the one shown on this map. It is the system developed especially to serve G.L.F. patrons and it serves them in three important ways: (1) It is economical. (2) It delivers fertilizer in excellent drilling condition. (3) It provides point-of-use service with formulas adapted to local needs.

(1) Economical Movement of Materials

Located on the harbor at Baltimore, Md., the G.L.F. fertilizer basing factory receives fertilizer materials by boat from Europe, South America, and American sources. Here rock phosphate from Florida is manufactured into superphosphate. To the superphosphate are added potash carriers and nitrogen in the economical and less acidifying liquid form. The resulting mixture is called a "base," because by adding other materials to it any fertilizer analysis can be made. The base is thoroughly cured, then re-ground, and shipped to the nine smaller plants located in

areas of intensive fertilizer use. The base is received at four of these plants via money-saving boats.

The materials used in the bases made at Baltimore are, in general, those which move naturally by water to this port. The nine plants in N. J. and N. Y. add to the base other materials which come in by rail or barge, at less cost than from Baltimore.

(2) Mechanical Condition

Certain combinations of fertilizer materials react with each other in such a way that the mixture hardens or "sets up." By putting the difficult materials into the base, curing the base, and then re-grinding it, G.L.F. gets a free-flowing mixture. Other non-cak-

G.L.F. FERTILIZER DISTRIBUTION. The twice-mixed, triple-tested fertilizer used by G.L.F. patrons is the product of experiment stations and private research, and combines successful farm results with sound manufacturing and distribution.

ing materials can then be added to this mixture without affecting the drillability.

(3) Point-of-Use Service

Because each crop-growing area has its own set of growing conditions, final mixtures are made in nine plants conveniently located throughout G.L.F. territory. Plants near intensive growing regions can turn out just the kind of fertilizer the soil and crops of each area demand, and can make special mixtures to meet special conditions.

Bags are Lower

Burlap prices have declined from the wartime highs of the past few months. Bag costs as reflected in feed prices have been lowered accordingly. Prices paid for returned bags are also lower.

Bags are still valuable. No. 1 grade G.L.F. branded 10-ounce bags are worth 9 cents at the receiving points in Buffalo, Albany, and Worcester, Mass. They can be shipped direct or turned over to your G.L.F. Service Agency which will naturally have to pay you a little less for them.

Super Poultry Oats

In response to requests from poultrymen, SUPER POULTRY OATS are now available. Minimum weight, 40 lbs. per bushel. They are recleaned, heavy, white clipped oats, very uniform in bulk.

COOP. G. L. F. EXCHANGE, ITHACA, N. Y.

CHICKS NEED VITAMINS

There are at least eleven vitamins that poultry need. The quantities required by growing chicks are so small that they can't be measured in pounds, ounces, or even grams. But the chicks must have them or die. Many of these vitamins are found in common feed ingredients in such quantities that it is no great problem to provide enough to meet the chicks' needs. But some of the more important ones have to be partially supplied by adding special ingredients to the feed. Three of the vitamins that demand special attention are Vitamins A, D, and G. This table shows how G.L.F. Starting & Growing Mash provides them.

	Needed for	Chicks Require	Starting & Growing Mash ★ Provides
VITAMIN A	Health of mucous membranes—mouth, nasal passages, intestinal tract, lungs, etc. Helps prevent eye infections. Deficiency affects kidneys.	1350 to 1800 units per pound of feed	7500 units per pound supplied mainly by cod liver oil, alfalfa meal, and yellow corn.
VITAMIN D	Growth, mineral assimilation, prevention of rickets	90 units per pound of feed, or 180 units per pound of mash when fed 50-50 with scratch grains	363 units per pound equal to 181 units per pound when fed 50-50 with scratch grains. Supplied by reinforced cod liver oil.
VITAMIN G RIBOFLAVIN	Growth and prevention of nutritional leg paralysis	1500 units per pound of mash provides a 20% margin of safety for chicks during the first eight weeks. The requirement decreases as birds grow older	1915 units per pound of mash, supplied by dried brewers' yeast, alfalfa meal, dried whey, fish meal, meat scraps, wheat by-products, and corn meal

★ The 1939 formula Starting & Growing Mash (available on request), which contains dried skimmed milk instead of dried brewers' yeast, supplies all the required vitamins with approximately the same margin of safety.

THE FARM PAPER OF THE NORTHEAST

How Can I Stay in the POULTRY BUSINESS?

by E. R. Eastman

GET INTO a car and ride across this great Northeast farm country of ours and see for yourself how poultry production has speeded up in recent years. See the big barns that have been remodeled to hold three or four floors of poultry. See every conceivable kind, shape and size of hen house filled to capacity; and if you make this trip in the late summer, note the countless thousands of young birds being grown and put into shape for fall and winter production.

During the entire ten bad years of the Great Depression, until last fall, eggs have paid fairly well, and better than almost any other farm product. The natural result of this comparatively better poultry situation has been that everybody who could has gone into the business, and those who are in the business have devoted all their time and attention to production problems, and little to the equally important jobs of marketing and of helping to increase egg consumption.

Now we have come to the time when poultrymen are faced with a choice of going out of business, drastically cutting down, or getting permanently back of efforts to increase consumption. Those who rushed into the business without experience and have been on the ragged edge since should get out and stay out; but poultry still has a good future for those who do have the fundamental essentials for success in the complex business of producing eggs—training, experience, and love of the job. Keeping hens is like writing. Practically everybody thinks that he is a natural born writer until he finds out by sad experience that all worthwhile trades have to be learned.

Realizing that the poultry business was reaching a jumping-off place unless something was done to get people to eat more eggs, leaders in the industry put on the greatest poultry show of all time at the World's Poultry Congress last summer in Cleveland, Ohio. The chief purpose of this Congress was to find ways and means of bringing the food value of eggs more emphatically to the attention of

Here are small reproductions of two of the many posters that will turn the thoughts of consumers toward eggs.

paigms" for this and for that, but seldom for eggs; and then we wonder why we have a surplus.

Leaders of the industry are now doing a valiant job to arouse consumers to the great food value of eggs. But they cannot do it alone. It is time for the rank and

consumers. Profits resulting from the Poultry Congress are being used in a great follow-up campaign for egg consumption; and the National Poultry Producers' Federation has made an agreement with the National Association of Food Chain Stores, also with the independent store groups and restaurant groups, to put on big sales which feature eggs. The first of these, "Springtime Egg Festivals", is being held this week; the second will follow during the week of April 11. Illustrated on this page of *American Agriculturist* are some of the many attractive posters boosting eggs which have been designed and printed by the International Baby Chick Association for distribution to any store or group of stores that will use them.

Following the Poultry Congress, a Planning Committee was set up to work out an egg consumption campaign, national in scope and on a permanent basis. Fortunately for egg producers, eggs are mankind's most valuable food next to milk. They are high in almost every kind of food value needed by the human body for good health; and they are mighty good eating. But while about every other food has been highly advertised and exploited by the farmers and others interested, eggs have been almost entirely neglected and forgotten. As a result, eggs have lost favor with consumers, and price has continually decreased. Look at the way citrus fruits have been advertised! When I was a boy an orange was rare; today even in poor families I'll bet more oranges are eaten than eggs. We have "advertising weeks" and "promotion cam-

file of producers to realize that if they are going to stay in the business, each has an individual job to do.

"All right!", you say, "what can I do?" Here are some suggestions. Follow them and add on any ideas you can think of, and see how big and successful you can make this "Springtime Egg Festival" right in your own home town. Your local "Springtime Egg Festival" will be tied together nationally with those in other communities through the cooperation of the groups of food chains, independent stores, drug stores, meat markets, and others.

First Step—Continue to put the freshest, highest quality of eggs on the market.

Second Step—Use more eggs on the table of your own family, and get your farmer and village friends to use more. Practice what you preach!

Third Step—Make up a complete list of all the business men in your town. Use the telephone book for this. Your list might include grocery stores, drug stores, hardware stores, newspapers, banks, court houses, restaurants, hotels, bus stations, food stores, hatcheries, department stores, theatres, high school cooking departments, roadstands, county agents, and many others.

Fourth Step—Take a day off and make a personal call on the business men you have listed. If you cannot see all of them, telephone them and then follow this (Turn to Page 22)

A CRITICAL FARM CREDIT SITUATION—SEE PAGE 5.

Flexibility on Four Wheels

New principle of mounting the adjustable front axle gives you a 4 wheel all-purpose cultivating tractor. The dual push rods and radius rods need no adjustment when the front wheels are extended.

THIS spring, take the first opportunity you can get to try some fingertip plowing behind the wheel of a new Ford tractor with Ferguson system. See if you don't get the impression that plowing was never *easier—or better.*

Then try your hand at cultivating corn—with a rear cultivator, and with all four wheels spread out 76" across the treads.

When you turn at the ends in an 8 foot radius to go into the next two rows, you'll learn something then about *flexibility on four wheels.*

Easy is hardly the word for it. It's practically *effortless.* Even a boy will find it so.

The Ferguson-Sherman rear-mounted cultivator works without watching—you just sit and steer without minding the shovels. When you steer away from the row, the shovels move away from the row. When you steer towards the row, the shovels move towards the row. It's just that simple. Rear cultivation is practical now for the first time.

At the ends of the rows the implement is lifted or lowered by the merest fingertip touch—*hydraulically.* The depth of the sweeps or shovels is automatically maintained—*hydraulically.* There's no work at all to *these* operations.

It may be hard to imagine cultivating two rows at a time with a tractor so light it doesn't pack the soil. It may be hard to realize that this light tractor is a rugged *two-plow* tractor, built of tough alloy steel new to farming, and with implements that can be attached or detached in one or two minutes.

In any case, don't be satisfied with *imagining.* Ask for a demonstration on your own farm. Find out for yourself about *flexible farming.*

. . .

The Ford tractor with Ferguson system is sold and distributed nationally by Ferguson-Sherman Mfg. Corp., Dearborn, Mich.

\$585 at Dearborn, Michigan. (Taxes, if any, and implements extra.) Ferguson-Sherman 6% simple interest time-payment plan plus small investigation and documentary fee.

WHEEL-LESS IMPLEMENTS

© Ford Motor Company

With accurate depth control, and a cultivator that follows the steering of the tractor, you can do a clean cultivating job on corn up to the time you lay it by.

Unique linkage system attached to the hydraulic controls lets you plow steep hills, narrow plots, hard ground, soft, sandy soil and rock-filled fields.

★ THESE FEATURES AT NO EXTRA COST ★

Ferguson System of Hydraulic Controls • Pneumatic Tires • Safety Self-Starter • Power Take-off Shaft • Governor • Battery and Generator • Oil Filter • Muffler • Independent Rear Wheel Brakes • Oil Bath Air Cleaner • Adjustable Front and Rear Wheel Tread (48 to 76 inches)

Nitrogen-- for Hay

IN AREAS that suffered from dry weather last summer, and also on some fields in other areas, it is logical to assume that the hay crop this year will be short. John Barron, of the Department of Agronomy at the New York State College of Agriculture, has been giving special attention to various ways of meeting this hay shortage. Some of the suggestions were given you on page 10 of the February 17 issue. Here are some more!

Where a timothy field would normally yield about one ton to the acre, suitable top-dressing with fertilizer may give as good results in increased hay production as growing an emergency hay crop. The cost should be no greater and less labor will be needed.

Usually the fertilizing element most needed is nitrogen; but to get the greatest benefit from the addition of nitrogen, the soil should also be well furnished with phosphoric acid. Following is a table showing the nitrogen content of common nitrogen carriers and the amounts to apply to get approximately equal results:

Material	Per Cent Nitrogen	Pounds per acre for Timothy
Sulfate of Ammonia	20½	100
Nitrate of Soda	16	125
Cyanamid	22	91
Uramon	42	48
Cal-nitro	16	125
Cal-nitro	20	100

Moderate increases in the yield of hay are usually obtained by adding the amount per acre given in either of the first two columns under "Pounds per acre", but where larger yields are wanted, apply the amounts in the third column.

Professor Barron estimates that, based on the current cost of nitrogen carriers and on the usual increase in yield, the addition of a nitrogen carrier will result in 100 lbs. of digestible nutrients at a cost of from 40c to 75c.

To get best results, it is important to add commercial fertilizer early in the spring, as someone has said, when it is time to take in the sap buckets, although reasonable results in many seasons are obtained by putting on the fertilizer as late as May 15.

It is possible to put on the fertilizer broadcast by hand or by using a mechanical hand grass seeder; but probably the most satisfactory tool is the grain drill, using the fertilizer attachment. Usually the tubes are removed and a board fastened in a slanting position under the openings of the fertilizer attachment so that the fertilizer is spread evenly as it falls.

An application of from six to eight tons of manure to the acre is another way of increasing hay yields; or if you wish, you can apply ten, twelve or more tons to the acre. For best results, this manure should have superphosphate added to it, either in the

stable, on the load as the manure is spread, or the field can be top-dressed, after manure is applied, with the equivalent of 200 lbs. or more of 20 per cent superphosphate to the acre.

Seeding Without a Nurse Crop

While common practice is to seed hay with a nurse crop, there may be situations where it is advisable to seed grass alone. Such a situation might exist where there is need for a medium yield of high-quality hay this year, and where it is desired that the seedings put out this spring should be as certain as possible to yield well in 1941.

Such seedings without nurse crop, whether they be alfalfa, the usual meadow mixtures, or sweet clover, can be seeded early in the spring on especially prepared weed-free land, and

by mid-August will usually produce a good yield of high-quality hay. Because it was unnecessary to compete with a nurse crop, these grass and clover plants will have unusually good vigor and will be well set for living over the winter.

Aside from having land free of weeds, the important consideration is to get the seedings in early. As a result, you should choose land that can be worked early. Make your seed bed firm, with a shallow, well pulverized surface layer. None of the seed should be planted more than ½" below the surface of the soil. Experience shows that alfalfa can be successfully seeded in this way, and regular meadow mixtures have also given satisfactory results. However, sweet clover is a little more sure than any of the other

crops to give a heavy yield of hay in August when seeded alone in the spring. In all cases, about 15 lbs. of seed should be sown to the acre.

To Discourage Mustard

No one can ride across the farm country in early summer without being impressed with the losses caused by mustard in grain, peas, corn, and other smooth-leaved crops. So farmers are glad to know that at last scientists have found an effective control for mustard.

It consists of 100 pounds per acre of aero-cyanamid dusted on while the leaves are wet. Because cyanamid contains 22 per cent nitrogen, the application pays from a fertilizer standpoint.

Cooperation Got Good Milk Prices

NO WORDS can describe what the better milk prices which farmers have received in recent months have meant to thousands of dairymen and their families. For the first time in years, farmers have been able to get out from under some of their awful load of debt, and to have some of the necessities and little luxuries of life that make the difference between living and just existing. Let's work and hope and pray that these good milk prices will continue!

If they do, however, it will be necessary for farmers to remember that we get these milk prices by cooperation, plus the State and Federal marketing agreements. If the good prices are to be maintained, that cooperation and the support of these agreements must be actively maintained. Minor problems and disagreements must be worked out within the organizations themselves, and a united front presented to your enemies. Rest assured that the enemies of organization will grab any opportunity they can to make trouble. At times they have almost succeeded. A year ago they did temporarily succeed by bringing an action in the lower courts to get the marketing agreements kicked out. You know what happened to prices when these agreements were out!

With the restoration of the agreements, milk prices came back. *American Agriculturist* has been bitterly criticized for its active and enthusiastic support of dairy cooperatives, plus the marketing agreements. But we are proud of that support, because we know that cooperation with the milk marketing agreements has resulted in fair prices to dairymen.

Now you are again approaching a surplus period, and a season of lower prices. Immediately your enemies will get busy, and some of you may forget. If you stick together, surplus or no surplus, spring prices will not crash like they did last year. If you don't stick together, they will! It's up to you!

Give Eggs a Break!

SPEAKING of eggs, my friend, John E. Pickett, editor of that interesting farm paper, the *Pacific Rural Press*, says:

"Come to think of it, eggs are already in beautiful packages, put there by Nature. Man has never been able to devise a more ornate, more delicately tinted, more lovely textured package than an egg shell, and inside it is color, health, charm, if we would but appreciate it and make full use of it.

"If they were better appreciated, eggs would be facing 1940 without a care. Right now eggs are at their best. They are packed with pep and freshness and high quality, they are cheap . . . if every hen owner would do his part in getting the eat-more-eggs measure started, this would be done with pleasure and profit, because eggs are cheap food, and along with milk they rank as one of Nature's great protective foods.

"Food values of eggs deserve more attention:

"1. Eggs are a cheap and easily digested meat—no bone, gristle, or waste.

"2. Eggs are very high in food iron, ranking close to liver and spinach.

"3. Eggs are a good source of Vitamin A, pretty good in Vitamin BI and D.

"4. Eggs are excellent in calcium. They help build bones and sound teeth."

Thanks, John. You said it for me, and said it better.

For some of the best egg recipes ever published, see Page 24 of this issue. You will want also to read the article on Page one.

State Aid Lowers Local School Taxes

BELOW is a diagram showing in a startling way how state aid has shifted a large part of the tax burden for school support away from local property taxes. The black area represents the per cent of school costs paid by local property taxes. The white area represents the amount paid by state aid. Figures are based on annual reports of the New York State Education Department.

Black—Local property taxes; white—State aid.

The diagram also shows the danger of any campaign to reduce state taxes because the first place state officials will turn to cut the taxes will be on direct state aid for education. Any large reduction of state aid for education will increase local taxes.

On the other hand, this does not excuse local school officials for being extravagant. It is now their responsibility to cut out all unnecessary school activities, to improve efficiency, and at the same time decrease costs. Taxpayers have come to the limit of their endurance. School and road authorities must cut expenses themselves or others will.

Government Loan-Spending Policy

WHEN you can't make ends meet—spend more!

When taxes don't come up to expectations—don't retrench. Go after more taxes.

Go after more taxes to get more money to spend more money.

In order to get a 10c government subsidy, tax yourself, your children, and your children's children 90c.

Consumers Want to Know About Apples

AAMERICAN AGRICULTURIST published recently a little bulletin of apple recipes, mentioning in *A. A.* that the recipes would be sent to anyone who would send 3 cents to cover the mailing charges.

In a short time after the brief notice appeared, we had several hundred requests for the apple recipe bulletin. This and other evidence shows that consumers want to be told about the wonderful qualities of northeastern apples. The industry has not scratched the surface in the publicity and advertising possibilities of apples. The New York and New England Apple Institute is doing a splendid job with the means at its command, but it needs the active and financial sup-

port of every producer. Since the war started, the export apple trade is largely gone. That means that growers must find a way of increasing domestic consumption.

Garden Fun

DO YOUR garden plans include some of those new sweet corn hybrids? One of these, Golden Cross, is the best all-around sweet corn I ever planted. Seneca 60 is another sweet corn hybrid with a growing reputation. I am going to try some this spring. Ioana is said to be worth trying on a small scale at first.

There's a lot of fun in trying out varieties of vegetables which are beyond the experimental stage and yet are new. Get out the seed catalogs, go over them again for new promising varieties of all vegetables which are recommended by the seedsmen.

Another suggestion is to start an asparagus bed. I have always been promising myself to do this; this year I am really going to do it. Cornell says that asparagus beds can sometimes be made to last as long as fifty years. I won't need one that long! Like maple syrup, asparagus is one of the first crops of spring, and therefore doubly appreciated. It will grow and thrive on almost any soil in the Northeast. Seed catalogs and bulletins will tell you how to get started.

A better garden is one way to rally around the *American Agriculturist* policy of more living and fun from the old farm itself.

Grow Your Own Pork

"We find that we can maintain a herd of brood sows with very little cash outlay by pasturing them on clover during the open season and feeding them grass silage and a very little grain in the winter. This diet shows results in very good sized litters of strong pigs."—H. E. Babcock, *"Kernels, Screenings & Chaff, March 2 issue.*

PORK is lower in price, but is just as good eating as ever. Every farm ought to have enough hogs for pork for the home table. If western farmers can grow them mostly on pasture, you can make your farm give you a better living.

Eastman's Chestnut

MRS. ROBERT PERRY, of Arkport, New York, sends me the following chestnuts, with the challenge that I don't dare print them because they are on the men. Well, this corner never takes a dare, so here goes:

"AIN'T IT THE TRUTH!"

I love to watch a rooster crow;
He's like so many men I know,
Who brag and bluster, snort and shout,
And beat their manly chests, without
The first darn thing to crow about.

* * *

As soon as tea was finished, Farmer Beeton announced to his household that he was so tired of eating badly-made bread, that he would make the next day's supply himself.

"Good idea", agreed a visitor. "I'll lend you a hand, if you wish."

It was past midnight, and still the amateur bakers were hard at work. The farmer's wife ventured to ask whether the bread was in the oven.

"In the oven," yelled Beeton. "We can't even keep it in the kitchen, let alone in the oven."

A Critical Farm Credit Situation

FIRST. On April 25, 1939, President Roosevelt issued an Executive Order putting the independent Farm Credit Administration into the Department of Agriculture.

SECOND. Answering the immediate and emphatic protests of farm organizations against this move, Secretary Wallace, with concurrence of President Roosevelt, issued a public statement agreeing not to interfere with the independent features of Farm Credit work, and stating that the only difference would be that the Governor of Farm Credit would report to the Secretary of Agriculture instead of directly to the President as heretofore.

THIRD. In December, 1939, just eight months after this promise, Secretary Wallace demanded the resignation of Governor Hill, with the statement that if he, Secretary Wallace, was to have responsibility for Farm Credit he was going to run it!

FOURTH. Following Governor Hill's resignation, I stated in our January 6 issue that the Farm Credit system in the United States, which had meant so much to farmers, was in danger of being ruined by the loss of good men who had built the great system, by the introduction of politics, and by the loss of the cooperative features of Farm Credit which had given farmers themselves considerable control of the system. Rapid developments since I made these statements emphatically bear out the dangers I pointed out. For example, note the "purge" of the men who have helped to build Farm Credit by recent forced resignations.

Since forcing Governor Hill out, Secretary Wallace has asked for resignations of numerous men, including:

(a) PEYTON R. EVANS—Mr. Evans has been legal counsel for Farm Credit for 13 years, and has been one of the ablest men in the work.

(b) G. D. LYONS — Mr. Lyons was Deputy Governor of the Farm Credit Administration, and has been in Farm Credit work at least 6 years.

(c) E. M. EHRHARDT—Mr. Ehrhardt was President of the Federal Land Bank at Spokane, Washington, and had served Farm Credit for 14 years.

Rumors are coming fast and furious that other resignations of leading executives and workers, including especially that of Land Bank Commissioner Albert Goss with a record of 15 years of Farm Credit service, are soon to be demanded.

It will be noted that every one of the men whose resignations have been asked for has been with Farm Credit for many years. Without exception these men have made great contributions to the work, and have been largely responsible for the great service that Farm Credit has rendered to farmers of the United States.

President Roosevelt has had much to say about establishing career service in government, putting service above politics. How can he, therefore, defend this reckless discharge of competent men who have devoted their lives to Farm Credit service?

FIFTH. Purpose back of Secretary Wallace's Farm Credit policies is said to be at least twofold:

(a) That he may secure personal and political control of a great independent organization, partly owned and controlled by farmers, which heretofore has been free of politics or personal dictatorship.

(b) The second purpose in discharging key men in the Farm Credit Administration is said to be to turn a cooperative business organization into a charity one. Secretary Wallace says he wants to "liberalize" Farm Credit. At present most Land Bank mortgages and Production Credit loans are made from money secured by the sale of bonds and debentures to the investing public. Loans are made on the basis that they will be paid back. Now, apparently, this is to be changed, if Secretary Wallace has his way, to make loans on a charity basis, and beggars out of farmers. If this is the policy, it means that the investing public will stop buying Land Bank bonds and Farm Credit debentures, and that loans or gifts to farmers will have to be made out of the United States Treasury. That, in turn, means that

some other political administration will put a stop to the drain on the Treasury, and farmers will be left again with no credit service.

However, Mr. Wallace may not have his own way. Never have the national farm organizations been so aroused over any one thing. Many of the Democratic Senators, most of whom are sincerely interested in good government, are also up in arms, with the result that the Democrats themselves have introduced a bill into Congress to restore the independent status of Farm Credit and to put its management under an independent non-partisan Board. This bill is known as Senate Bill No. 3480. It was introduced into the Senate by Senator Gillette of Iowa, and is supported by such leading Democrats as Hatch of New Mexico, Miller of Arkansas, Truman of Missouri, and Meade of New York.

On Page 28 of this issue you will find a list of the Senators and Representatives of your State. If you want to keep the Farm Credit work on a sound business basis and preserve this great organization to continue service to American farmers, write immediately to the two Senators from your State and to the Representatives of your district, or to any others whom you know, asking them to give their support to this bill to restore Farm Credit to its independent basis. Officers, directors, and borrowers of National Loan and Production Credit Associations in particular should give attention to this matter if they believe that the cooperative business-like form of Farm Credit should be maintained.

Those Old Time Milk Contracts

MR. GEORGE MILLER of Slate Hill, Orange County, N. Y., sent me a copy of a milk contract showing the relationship between dairymen and dealers in the early days of the sale of fluid milk to New York City.

The contract has very little to say, indeed, about the responsibilities of buyers; but there is a long, long list of what the seller, that is the farmer, must do. I remember also that in the spring of 1898 or 1899 my father and older brother sold milk for one cent a quart and on an ironclad contract, which the dairyman signed without having a word to say about its provisions. Later, I signed similar contracts and so have all of you older dairymen.

One of the provisions of the early milk contract between dairymen and dealers was that they were written for a six months period and prices were fixed entirely by the dealer, six months ahead. No one can foretell milk prices, or any other kind of prices, for six months ahead or for even a three month period. The dealer well knew this, of course, so he made sure to make the price to the farmer low enough so that he could not lose no matter how low the market price later went. If on the other hand, the market advanced that was just so much extra velvet to the dealer. That is the reason why, when farmers became organized, one of the first things they did was to insist on a short term contract. Returing again to a long period contract would be a step backward.

The trouble with the milk problem, as well as with other problems—like war, for example—is that young men have not had the bitter experience of former conditions and older men forget. While we have plenty of milk problems left, plenty of more work to do, yet looking back over forty years of close association with the dairy business, I can see where really tremendous progress has been made.

OUR PLATFORM

1. STAY OUT OF WAR.
2. BETTER PRICES FOR PRODUCTS OF THE FARM
3. LOWER FARM TAXES.
4. A GOOD LIVING FROM THE FARM
5. MORE FUN ON THE FARM.

Henry Clark, Honeoye, N. Y., who celebrated his 94th birthday Saturday, Aug. 13th. One of the few living veterans of the Civil War, he is hale and hearty still and takes his three square meals daily. He has been confined to a wheel chair about two years on account of weakened knees. His entire service in the war was under General Sherman and he was with him on his famous "March to the Sea". Mr. Clark's memory is remarkably clear and he can recall many interesting events of the war.

"Salute Thyself"

DID YOU ever stop to think that some of the world's greatest achievements have been made by tremendously handicapped men and women. In a beautiful little New Year's message, entitled "Salute Thyself!" William H. Danforth, well known to *American Agriculturist* readers through his "I Dare You" column, repeats the following quotation taken from *A Challenge*, by Paul Speicher:

"When a man is determined, what can stop him?"

"Cripple him and you have a Sir Walter Scott.

"Put him in prison cell and you have a John Bunyan.

"Bury him in the snows of Valley Forge and you have a George Washington.

"Have him born in abject poverty and you have a Lincoln.

"Load him with bitter racial prejudice and you have a Disraeli.

"Afflict him with asthma until as a boy he lies choking in his father's arms and you have a Theodore Roosevelt.

"Stab him with rheumatic pains until for years he cannot sleep without an opiate and you have a Steinmetz.

"Put him in the grease pit of a locomotive roundhouse and you have a Walter P. Chrysler.

"Make him second fiddle in an obscure South American orchestra and you have a Toscanini.

"Let life challenge you and be confident in your reply, for you are a man and the hardships of life are sent you not by an unkind destiny to crush you, but to challenge you. Our humanity is not our weakness, but our strength. Despite much of the artificiality of life around us, the two greatest words in the English language still are 'I can'!"

The Limit

By CLARENCE EDWIN FLYNN

They've taxed his house. They've taxed his lands.
They've taxed his enterprise.
They've taxed the labor of his hands,
And everything he buys.

They've taxed his fun. They've taxed his gains.
In years both lean and fat.
Only his patience still remains —
And now they're taxing that.

MAKE MORE PROFIT FROM FRUIT

ANY profitable orchard program must provide a good supply and proper balance of all plant-food elements for the trees and cover crops. Nitrogen and potash are used by the trees in about equal amounts. Potash gives vigor to the trees, increases resistance to diseases, and improves the keeping quality of the fruit. It also is necessary for a heavy growth of cover crops.

Ask your county agent or experiment station how much potash your soil will supply and how much to add to carry your crop through to profit. Then make sure that your dealer sells you a fertilizer containing enough to supply what you need. You will be surprised how little extra it costs.

Write us for further information and free literature on the profitable fertilization of crops.

Clearing out brush in the orchard with a minimum of labor.

PUSH 'EM UP

Don't Pick 'em Up

By ED. W. MITCHELL

IT IS so easy to rig a piece of old tin roof on a stone boat or sled, and burn the brush as you pick it up; so easy to lay a couple of poles or a few plank on the front axle of a wagon, put in a couple of stakes and load on that low, sloping frame, and then just pull the stakes, and pull out from under the

chain from the center of the tractor front axle to the cross bar as far out as possible and still clear the wheels; or cross these chains from the cross bar to the opposite axle end or track frame so these chains pull and steer the brush pusher as the tractor is turned. Lastly, make two heavy S shaped irons

My brush pusher. The end nearest you is the business end; the farther end is hooked to the back of a tractor.

to hold the rear end to the draw bar. These and the block should be heavy and strong and spaced pretty well apart, as they contribute to the steering and take lots of strain off the crossed chains in front. Drop a bolt through the iron, the draw bar and on through the plank and you are all hooked up and ready to go as soon as you build some sort of a guard to keep brush away from the radiator and crank. Steel fence posts are good for this, but anything that is strong and well braced will do.

You can pick up the equivalent of a good big hay-rigging load of brush at each trip, and it packs pretty hard, so do not use the radiator as a back-stop. You may stall and it is no easy job to move that brush away from the crank by hand.

Kick the brush out from the trees into a wide windrow, drive along slowly with one man on each side of the pusher to help get it all up clean, push up to the pile or fire and back away from the load. The two men should push forward on the heap as the tractor backs away. You want a good driver, and you do not want to stall if you are pushing onto a burning heap, which is a nice way to get rid of a lot of brush in a short time, and a tractor, too, if one is careless. A little experimenting and practice will help you get your orchard brush picked up in about one-fifth time you can do it by any other method I have seen.

Park the tractor on the barn floor, or any other comfortable, convenient place, lay the 2 long planks underneath and separated at the front as far as clearing the front wheels will permit. Then proceed to bolt a heavy, hardwood block across the back and the 12 ft. 2 x 8 across the front so it will clear the front wheels and also give room to crank the tractor. Point and bevel off the 2 x 4's and bolt one on top at each end of the cross bar, and one midway between the end and the long plank but on the under side of the cross bar, giving two long and four short teeth to pick up brush. Fasten a piece of

Here is how I hook up the brush pusher to the tractor.

With Milk at \$2.00 per Cwt.

2 EXTRA Cupfuls
per milking make
a cow's feed worth
\$8.00 a ton MORE

If you feed a cow 10 lbs. of dairy ration per day and get 8 to 10 quarts of milk per milking (twice a day) you are getting a fair return from your feed—figuring milk at \$2.00 per hundred.

But if you feed her the same quantity of dairy ration, and get as much as 2 cupfuls MORE milk per milking, you get \$8.00 a ton MORE INCOME from your feed.

You might not notice 2 extra cupfuls in 8 or 10 quarts. But look how they add up:

2 cupfuls equal 1 pint, which is 1 pound
2 extra cupfuls per milking give you 2 extra pounds per day

That's 4 cents additional income (at \$2.00 per cwt.)

4c extra income from 10 lbs. of feed equals
\$8.00 extra income from 2,000 lbs.

Every extra pound per milking that you get without increasing the daily allowance of feed, gives you \$8.00 additional income per ton when milk is worth \$2.00 per cwt. This

is an important point to remember when buying feed.

We invite you to test Purina Cow Chow against your present ration, on this basis. Cow Chow is built to produce a high milk yield per ton. It may cost several dollars a ton more, but as these figures show, it is actually WORTH \$8.00 a ton more if it increases the milk yield as much as 1 pound per cow per milking. If it increases the milk yield by 2 lbs. per cow per milking, it is worth \$16.00 a ton more. In many cases, we believe, the extra income from feeding Cow Chow will be far greater than the extra cost.

The dairy outlook today is infinitely brighter than it was a year ago. It is again sound business to increase the daily output, as long as the increase is produced at a profit.

SALUTE THYSELF!

... and Measure Up

LAST MONTH we talked about our personal goals for 1940. At the start of each year some of us have a vision of the Bigger Self we hope to be at the end of the year. But in glancing back over past progress, have we really become our Bigger Selves?

Take ten short minutes to think back. Challenging thoughts will race through your mind. If we failed to measure up to the full last year and the year before, shall we let any semblance of failure stop us today in this privileged year of 1940? NO—emphatically NO! No matter what part the past has played in our progress, this year must grow better.

... Have a Program

1939 has passed on. Did you obtain what you wanted above everything else? I didn't obtain everything, but following a definite program I showed progress. Right here may I tell you again how much I believe in having a program.

"W. H. D. is a program man," I hear people say, with an inflection which tells me that programs don't bulk very large in their lives. I won't press the program point. If you can obtain your WANTS without a program, fine! But I can't. I like my ABC's in consecutive order. However, I say again, the big thing is to arrive. Choose your own course, but get there.

■ ■ ■

IF YOU ARE in earnest in planning your personal program, I want to commend a little book called "Facing Life," by W. H. P. Faunce, and pass along a few of his thoughts:

"Whoever acts on what he knows will soon come to know more."

"Character is a great stream of devotion, self-dedication and high endeavor flowing all through a man's life, and that stream is fed by many rills from many unsuspected sources."

"Temptations Upward. There are no temptations in a cemetery. To be alive is to feel, to choose, to grapple, and a good life is a good fight."

"The strong man is one who can toil for forty years without breaking down nervously or intellectually, but under all the 'bludgeonings of chance' can remain erect, resolute and resilient."

"Interested men are always interesting."

"A man with no deep-seated enthusiasms for any cause, no convictions for which he will live or die, no desire to follow up any trades, is not only a parasite but a bore. He is not even interested in himself."

■ ■ ■

I'M NOT ASKING for your reactions, but a post card telling me you are developing a program would make me feel a closer partnership with you because of a suggestion on my part.

CLEAN SPARK PLUGS start quicker, and stop power loss

Engine speeds, compressions, and temperatures are *higher* these days. Engineers have made these changes to give you better performance and more power. Refiners have kept in step with higher octane fuels. As a result, spark plugs take far heavier punishment. They need cleaning and regapping much more often.

Get your plugs cleaned regularly, and you'll save gas and get more power. If you keep a spare set of plugs handy, you can take the dirty plugs to town for cleaning and regapping without tying up any equipment.

My Neighbors Say
A Visit With 32,000 Farmers
About Fertilizer

By BEN JAMES

ABOUT this time of the year there is nothing much more helpful, in planning the coming season's work and crops, than to sit down for a good old-fashioned visit with a few of the neighbors. It is then that you can talk over crops you put in in the past, and perhaps do a little boasting about the yields you got, or go in for some muttering about the yields you didn't get. There will be arguments, too. But out of it all come definite hard-boiled results. You learn many useful ideas that save you money and make you some extra money.

Because such visits produce the best picture of what is actually going on on the farms of the Nation, modern surveys or polls use personal calls to get down to grass roots and find out what a large number of individuals are doing and thinking.

A poll recently conducted by The National Fertilizer Association is an example of this type of modern survey. Over 650 men drove up and down the highways and byways of 35 States asking farmers a set of 25 questions. They were good, down-to-earth questions—"What crops did you put in?" "What yields did you get?" "Did you fertilize?" "Did the money you spent for fertilizer pay you?" "Did you get ideas from your farm papers, your experiment station, your county agent, your fertilizer dealer?"

The answers to these questions given by over 32,000 farmers were recorded in 650 books. The books were put in the hands of a tabulating concern which, by use of complex machines that work with impersonal mathematical accuracy, ground out the results. These results have just been recorded. The reading of them is like a meeting with 32,000 neighbors who are up against about the same farming problems you are, and hearing what they have to say about their work.

Of course, when 32,000 farmers speak as one average composite farmer, that one talks in tall figures. Consider the average farmer made up of 32,000 others being asked the question: "From your general experience, what yields do you expect to get from the use of fertilizer, and what yields would you get without fertilizer?" In reply to these questions the composite farmer replied: "I spent \$196,947,670 on fertilizer. The value of extra yields produced by it amounted to \$709,810,175, and I received an increased income above the cost of fertilizer of \$512,862,505." In other words, for each dollar that each farmer spent on fertilizer the average increased return for all States, for all crops, was \$3.60.

So far as the greatest return for dollar in crops is concerned, the survey as a whole shows that tobacco pays the highest return. Cotton, fruits, and vegetables also make relatively large returns. The lowest were those shown by grains, but in every case the value of increased yield is more than sufficient to make the use of fertilizer profitable. And when you fertilize a grain crop you usually expect a part of the return on the hay crop that follows.

After hearing an interesting piece of news from anyone a natural question to ask is, "Well, where did you hear about that?" And after farmers had told interviewers about their practices just that question was asked in the form of queries that brought out different types of information used by farmers and relied upon. It netted some enlightening replies. Over 77 per cent of all farmers interviewed stated that they read farm papers, 27 per cent said

they read two papers, 9 per cent read three, and 2 per cent read four papers.

Over 91 per cent of New York farmers reported reading one or more farm papers; 26 per cent read one paper; 40 per cent read two papers; 18 per cent three papers; and 5 per cent four papers.

Almost one-third of the farmers interviewed reported visiting their State experiment stations, and 54 per cent said they attended meetings and demonstrations conducted by county agents, while over 88 per cent of those attending declared that they received information of value.

As to information on the use of fertilizers, farmers reported that, when it came to helpful agencies in selecting grades of fertilizer used, the sources most influential were, in the order named: fertilizer dealer or agent, the county agent, the farm paper, and the agricultural college. In considering this report it must be noted that local agents or fertilizer dealers are influenced by county agents' recommendations, which of course come from agricultural colleges, and are also set out in farm papers which the fertilizer agent reads.

In the course of getting a complete picture of just what the farmers interviewed actually thought, they were asked this question, "Do you think the price of fertilizer is too high?" That was a daring question because it is human nature for people to think that

THIS IS THE TRACTOR TO BUY!

— for 1940 gives you increased power . . economy . . easy handling . . speed . .

The new 1940 Silver King Tractor with its new and larger engine gives you all the power you need at the draw bar on any kind of work. Power that plows with ease through the tough spots and over the hills. Plowing speed from 2 to 5 miles per hour. Highway speed up to 25 miles per hour. For plowing, discing, harrowing, seeding, cultivating and harvesting, you'll find plenty of power in the Silver King to pull your farm tools at a surprisingly low cost and ease of operation.

Proved Dependability! Proved Low Upkeep! Silver King's the Tractor!

Thousands of Silver King owners in all parts of the country are pleased with Silver King performance and economy. You, too, will be thrilled with its many features. Streamlined for accessibility and easy attachment of tools, easy on gas and oil, automotive steering, low upkeep. The Silver King is a tractor for any farm, large or small. Ask us for the name of the Silver King dealer near you.

IDEAS for the Farm Mechanic

How to Sharpen Auger Bits

NEARLY all farmers have auger bits for boring in wood, but few know how to sharpen them so they will do good work. An auger bit has three working parts—the lip which cuts the bottom of the hole; the spurs, which cuts the sides of the hole; and the screw or threaded point, which forces the bit into the wood.

An auger-bit file is the most convenient

venient for sharpening, but a small taper file works very well. The lip is sharpened by resting the point on a board and then filing only on the upper surface of the lip. The spurs are sharpened by filing them on the inside only. Any filing on the outside will make the bit cut too small a hole and cause the twist to bind. If the screw is rusted or badly worn, the bit will work better if the threads are cleaned out and sharpened with a small taper file.

Home-Made Pipe Reamer

The diagram shows a simple but effective pipe reamer for removing the

burred edges inside a pipe cut by the wheel pipe cutter. It is made from an old file, and for heavy work may be turned with a wrench down close to the cutting edge.

Put Up a Good Flood Light

Every electrified farm home should be equipped with a good strong flood-light which can be operated from two or three points to throw a bright light on the barn and poultry house. It will not only be a great convenience when you come home on a dark rainy night, but will quickly discourage poultry thieves if flashed full in their faces while the owner is back in the shadows with a pump gun loaded with heavy shot. Such lights are not very expensive, and it is a simple matter to direct them where wanted by using an old auto searchlight control with a light rod or pipe extension. Your local electrical dealer can quote you prices and details.

Paint Brush Protection

Wrapping in oiled paper and fastening with string or rubber band will save cleaning the paint brush when you wish to give several coats of enamel or paint close together.

RURAL WATER SUPPLY AND SANITATION is a new book just off the press. It is written by Forrest Wright, Assistant Professor of Agricultural Engineering at the New York State College of Agriculture, Ithaca; and is published by John Wiley & Sons.

This book gives specific, well-illustrated directions for various plumbing jobs, as well as basic information on pumps, sewerage disposal systems and types of water supply.

QUAKER STATE

Helps Farm Ledgers Balance in Black

Lyle Mathews, "Chief Mechanic" for Mathews Brothers, Colfax, Wis.

THAT'S the experience of the Mathews Brothers, successful general farmers of Colfax, Wis.

Farm-raised sons of a pioneer Wisconsin farm family, Lloyd, Lyle, and Clifford Mathews have developed their present holdings from a 240-acre homestead into the present plant of about 670 acres . . . one of the best managed and equipped grain and livestock farms in their area.

"Our system works because we buy good equipment, improve our soil, and plant good seed. That means good products to sell, with production overhead within reason."

The Mathews have proved

that good machinery, well cared for, is the surest road to farm profits. Good lubrication is the life of machinery, and good motor oil and grease is the best possible investment a farmer can make.

They are confident that Quaker State is the best value for the lubrication dollar. It's used in their autos, trucks and tractors, because they "believe it gives 23% to 50% more service per gallon than any other brands. It substantially reduces repair bills, and safeguards against breakdowns." Quaker State Oil Refining Corporation, Oil City, Pennsylvania.

CHILEAN NITRATE OF SODA the natural nitrate for your crops

FOR BETTER YIELD and better quality use Chilean Nitrate of Soda for your crops. It is the natural nitrate fertilizer—the only natural nitrate in the world.

Chilean Nitrate is guaranteed 16% nitrogen. It also contains, in natural blend, small amounts of other plant food elements—protective elements such as iron, manganese, magnesium, boron, iodine, calcium, potash, zinc, copper and many more. These protective elements act much like vitamins in their effect on your crops.

Use Natural Chilean Nitrate. It is well suited to your crops, your soil, your climate. No price increase this entire season, and there is plenty for everybody's needs.

How to Buy HYBRID SEED CORN

By R. G. WIGGANS.

EVERY individual concerned in any way with corn production is "hybrid corn" conscious. Yet all hybrid corns are not what the enthusiast represents them to be. One's enthusiasm may be the result of sound economic principles of production and a true desire to serve the agriculture of the area, it may have grown out of one's own experience in production, or it may be born on the desire for profit. Many belonging to the last group will make their presence felt through the press, by way of the mails, and in person from now until corn planting time.

My suggestions to hybrid seed corn purchasers and users for 1940 are:

1. Beware of the third class of enthusiasts mentioned above.

2. Purchase only seed of a hybrid adapted to the area in which it is to be grown and for the purpose for which it is to be used.

3. Seek advice of those in whose judgment you have confidence. I would suggest your Agricultural Experiment Station, your agricultural agent or farm adviser, the progressive farmers in your neighborhood, your farm paper and old and proven seed distributors in your region.

4. Buy seed certified by your recognized state seed certifying agency if at all possible.

5. Specify the grade of seed desired. High quality hybrid seed corn is always graded. The grades vary to some extent within the range of large flat, medium flat, small flat, large round, and small round. Usually there are three grades of any one hybrid.

6. Calibrate your planting machinery to the grade of corn purchased. The desired stand cannot be obtained by hit and miss methods.

7. Test or have your state seed testing laboratory test the germination percentage. If not what is desired or guaranteed, check immediately with your seedsman.

8. Store the seed in a dry, cool, rodent proof, place. Germination may easily be affected by storage conditions.

9. If without experience with the particular hybrid, plant only a part of the corn area the first year using the old and proven variety for the remainder of the area. Plant in such a way that the two can actually be compared on a fair basis.

10. Never use your own or let anyone sell you second generation hybrid corn.

If corn breeding work has been un-

der way for many years in a given area, and the best hybrid for a particular farm is chosen, there is little doubt that it will be profitable to the corn grower.

Editor's Note—29-3 double crossed corn is adapted for silage in New York State and for grain at lower elevations. It is also adapted for silage in Northern New England, but other hybrid varieties are better adapted for parts of Connecticut, New Jersey and Pennsylvania.

Soybean Acreage Increasing

IN RECENT years acreage sowed to soybeans has increased rapidly. Some varieties (notably the Cayuga) have been developed for grain purposes. Other varieties have been used to mix with corn silage, either grown in the corn field or separately. Other uses of the crop are for hay and for green manure.

While soybeans like a sweet or neutral soil, they are not as particular as many legumes; and if the soil is fertile, the addition of large amounts of lime is not necessary. Any soil that will grow a good corn crop will grow good soybeans. In fact, if the seed is well inoculated, soybeans will grow a better crop than corn on a soil of low fertility.

On light soils 2" is about the right depth for planting, but on heavy soils 1" is deep enough. More than usual thorough harrowing of the soil helps to control weeds which sometimes are troublesome. The most important single thing to watch is inoculation of the seed with bacteria which grow in nodules on the roots and fix nitrogen from the air, as all legumes do.

There are two methods of planting. One is to put them in rows like beans. The chief advantage here is that they can be cultivated to keep weeds under control. It is very important that the beans get ahead of the weeds rather than to let the weeds get a start. The other method is to plant solid, using a grain drill. In this case, the field can be harrowed several times until the beans get to be from 3" to 6" in height, using either a weeder, rotary hoe, or spike-toothed harrow. It may seem to the man doing the harrowing that he is ruining the crop, but experience has shown that soybeans can take it; and after a few days no damage can be seen.

Where Cayuga beans are sowed in rows to be cultivated, it takes about

"We had to get rid of the scarecrow. Pa couldn't get along with it!"

30 to 35 lbs. of seed to the acre. Where they are sowed broadcast with a drill, it takes from 90 to 100 lbs. For varieties such as Manchu or Dunfield, where the beans are larger, it will take a little more seed per acre. Soybeans are a warm season plant and should be planted about the same time as corn or a few days later.

Phosphorus Needed

Most soils in the Northeast lack phosphorus and in general the cheapest way to supply it is by the addition of superphosphate. Where field crops are grown in the usual rotation, a good rule is to add the equivalent of 200 pounds of 16 per cent superphosphate per year per acre. This would mean 400 pounds every other year or 600 pounds to the acre every third year.

Fifty pounds can be spread over the top of each ton of manure that goes to the field, 1½ pounds per cow per day can be used in the gutter, or it can be added to grain or cultivated crops through regular fertilizer attachment.

Our \$50 Garden Contest

Have you sent in your answers to the contest questions which appeared on page 2 of the March 2 issue? If you haven't, there is still time to get your answers in the mail before the contest ends on March 18.

Remember that \$50.00 in prize money is offered, and your chance of getting first prize of \$20.00 is just as good as anyone's. Winners will be announced in the April 13 issue.

My Neighbors Say —

(Continued from Page 8)

any commodity costs too much. Most of us, if asked, would say that taxes are too high. (Editor's note—And we would be right!) Most housewives would probably say the price of beefsteak is too high. In addition to this, there is this common tendency; an important commodity like fertilizer is likely to seem expensive as it is usually purchased only once or twice a year. The average farmer who uses fertilizer buys about \$100 worth annually. If he bought \$2 worth weekly it would probably seem less costly.

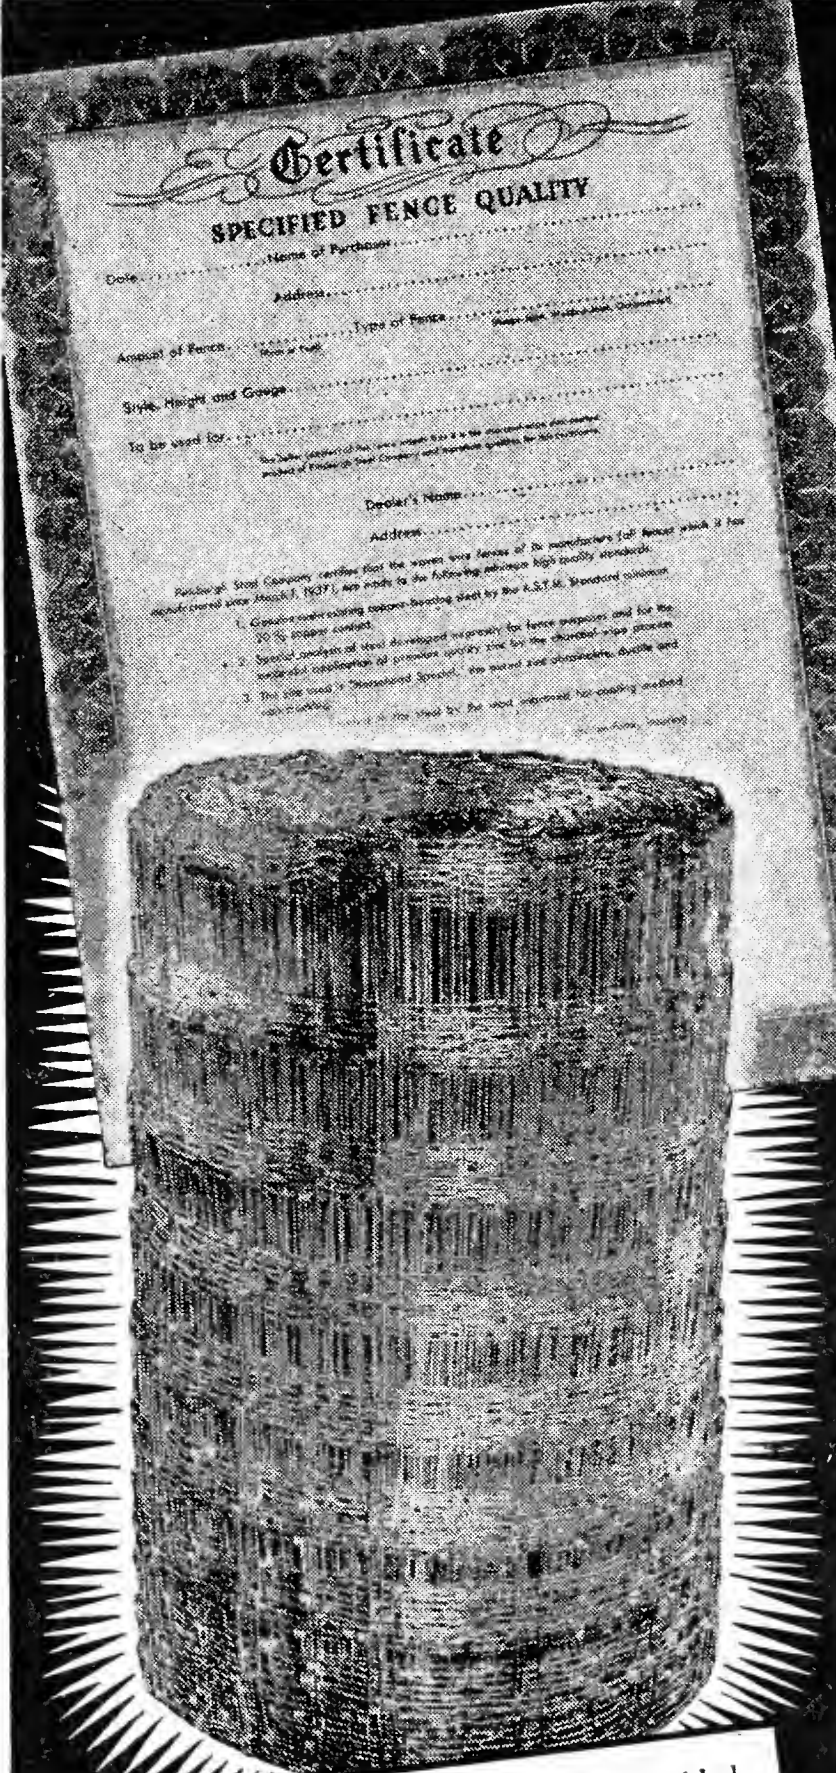

Nevertheless, 54 per cent of the farmers said they thought fertilizer prices were average, while 7.3 per cent stated that they believed the price of fertilizer was relatively low.

The latter group is well in line with the United States Department of Agriculture, which stated in a recent report: "Fertilizer prices, as a percentage of the 1910-1914 average, are considerably lower than the prices of most commodities bought by farmers." In fact, the recent tabulations show that they are lower than any other commodity which the farmer buys, with the exception of feed.

Help in Selling Timber

You may be interested in knowing that to date I have received about 175 letters in response to my article. These have all been answered and most of them have received various pieces of literature, in addition, which will help to answer some of their questions. I was surprised to find the amount of interest which the article apparently stimulated. As a result of the article I am getting out a Marketing Bulletin next week which will contain about 40 items of timberland and forest products for sale, which came in as a direct result of the article. We shall yet be able to give many of these folks considerable service.—Raymond J. Hoyle, Associate Professor of Forest Utilization.

EDITOR'S NOTE: The article to which Professor Hoyle refers appeared on page 3 of the January 6 issue, and described help which the New York State College of Forestry at Syracuse is able to give farmers who have timber to sell.

ROBSON

**Domestic
SULPHATE
OF
AMMONIA**
MADE IN U.S.A.

EXTRA TONS OF TIMOTHY

WHEN alfalfa and clover have winter-killed or "run out", you can still get plenty of low-cost, high-quality hay or silage by top-dressing timothy with Domestic SULPHATE OF AMMONIA. Apply this at 200 pounds per acre as soon as the land dries—by hand, with a grain drill, or a fertilizer distributor. The nitrogen in the Domestic SULPHATE OF AMMONIA will usually increase your yield on each acre by three-quarters to a full ton of hay, or four to five tons of green material for your silo. Try it this year. See how quickly your grass responds... how rapidly it grows... how heavily your land produces. Tell your fertilizer man you want Domestic SULPHATE OF AMMONIA, made in the U.S.A.

Send for your free copy of "PLANT FOOD FROM COAL"

for FRUIT Domestic SULPHATE OF AMMONIA, applied to fruit trees, strengthens the bloom, betters the set and increases the yield.

for GRAIN Domestic SULPHATE OF AMMONIA, at 100 pounds per acre applied early on winter wheat, usually adds 5 to 7 bushels per acre to the yield.

COLUMBUS, OHIO

Milk Market News

Milk for Low Income Families

RECENTLY in New York City a representative of the U. S. Department of Agriculture proposed a plan to provide 5c milk to relief families and to WPA workers. Briefly, it is proposed that a government subsidy of up to 3c a quart be paid to milk dealers and that milk be sold to needy families for around 5c a quart, the families eligible to receive milk being certified by New York City welfare officials.

The proposal includes setting up several hundred stations to distribute this milk; it is estimated that the plan might increase consumption of fluid milk in New York City by as much as 200,000 to 300,000 quarts a day.

If the plan works, the advantage to the milk producer is that this extra consumption would be Class I milk, and would therefore lessen the amount of milk which would have to be sold in lower classifications for less money.

The money to be paid dealers as a subsidy would come from that part of customs receipts which, under the law, are made available to the Department of Agriculture to be used to maintain prices of farm produce.

* * *

Reciprocal Trade Program

At Washington, the House of Representatives has passed a bill to extend the Reciprocal Trade Program for another three years. The vote was 216 to 168. The resolution will now go to the Senate, where final approval is expected, although opposition in the Senate is somewhat stronger. Leader of the opposition in the House was Representative Treadway of Massachusetts, who based his argument on the fact that there is no need of importing goods which we already produce in abundance.

* * *

What Happens When You Increase Milk Production

IN SPITE of one of the coldest winters in many years, milk production is on the increase. New York State Department of Agriculture and Markets reports that production for January was 6.5 per cent above the production for January, 1939, and represents the largest January production in New York since 1922. Percentage of dry cows on farms Jan. 1, was lowest on record. Grain fed per cow was highest since 1931.

Fortunately, dairymen in both New York and New England have the marketing agreements that will keep prices from crashing as low as they did, especially in New York, last spring and summer—providing, of course, that you and your cooperatives continue to work together.

But no plan for selling milk can long maintain milk prices at living levels if there continues to be too much surplus milk. Because of this situation, dairy organizations and individual dairymen are wondering if there is any practical milk production control plan. The Metropolitan Bargaining Agency has already appointed a committee to study different surplus control plans. As a matter of fact, the classified plan of selling milk is a control plan, if farmers as a whole really understand how it works, for every pound of milk which cannot be sold in fluid form helps to bring down the classified price.

In order to bring this fact clearly to the minds of dairymen, New York Commissioner of Agriculture Holton V. (Continued on Page 29)

Dr. Naylor's MEDICATED Teat Dilators

Safe and dependable treatment for
Spider Teat, Scab Teats, Cut and
Bruised Teats, Obstructions.

Dr. Naylor Dilators are sterilized, medicated and saturated with the antiseptic ointment in which they are packed. They have a deep yielding surface of soft absorbent texture which fits either large or small teats without overstretching or tearing and which carries the medication INTO teat canal to seat of trouble.

The Only Soft Surface Dilators

Whether infection at end of teat, cut or bruised, the resulting condition which closes teat canal making it hard to milk is always the same — INFLAMMATION.

To relieve inflammation in a wound or bruise the treatment most universally used by the veterinary and medical profession is—to apply antiseptics, healing agents and a sterilized, soft absorbent dressing.

Dr. Naylor's Medicated Teat Dilators apply this same treatment for removing inflammation from the milk canal of cows' teats. They carry antiseptics and healing agents into teat canal to combat infection and promote healing.

The dilators themselves are sterilized, soft, absorbent dressings which protect the inflamed area, absorb inflammatory exudates and keep teat canal open in its natural shape while tissues heal.

MARTIN ^{Better FARM BUILDINGS} METAL BETTER SILAGE and HAY—

The MARTIN Way

Get more from hay and silage with these two Martin Structures. Martin Ventilated Haymaker permits taking in hay while tough and eliminates loss of leaves. Provides extra high quality hay, retains bright green color and new hay fragrance. Avoids risk of mold, spoilage or mow burn.

Martin Metal Silos insure better silage and hold grass silage without leakage. Men who have used various types of silos all agree that metal silos make better silage with a minimum of waste, last longer and require less upkeep.

DOWN THE

By J. F. (DOC.) ROBERTS

HERE are some of the high spots of lectures and talk heard around the Cornell and the Michigan State campuses during their Farmers' Weeks; also, some of the things said at the Producers Livestock Annual Meeting in Buffalo:

Farm prices will probably be higher during 1940.

Prices of farms will also be higher, with few good ones being offered for sale.

Business will lag all during 1940; so will the stock market.

We will not feel the price rise due to war appreciably until 1941, and maybe not until 1942 or '43, and the war will last at least four or five years.

What is the height of wasted effort? Answer: Telling a hair-raising story to a bald-headed man.

You must really like livestock to be successful with it.

How do you reconcile 400 men at a livestock meeting in Buffalo, and all the interest and attendance of livestock meetings during Farmers' Week, with no livestock extension service in New York State?

Dairy cows produce half the farm income of the Northeast. That is dangerous. Too much depends upon milk price.

Horses have never been given a fair break. Gasoline power is set up on rubber tires, ball bearings, coupling devices and grease jobs. Set horses up with the same equipment and you might be surprised.

Trade agreements with foreign powers have, so far at least, hurt the farmer.

Any tariff policy hurts someone, so perhaps we should await future developments.

We made tariff concessions on about 225,000 cattle, and yet when their hog market got higher than ours and we could profitably ship hogs to Canada, they made a ruling that any such hogs would have to be held in quarantine 30 days before killing.

Dairymen's troubles are not solved, only held up until too much milk appears.

We must have livestock diversification and stop over-emphasizing dairying in the Northeast.

After all, farm fertility has always been, and always will be, the big farm problem.

No man can say you should have some beef cattle, a flock of sheep, or raise hogs or colts. Your farm probably is adapted to one of these, but even that may not be true.

How can great reclamation projects
(Continued on Page 19)

"We'll have to pull the sailor out, Chief. The stew's getting too salty."

I didn't realize how many farm jobs a FORD V-8 TRUCK can handle

It's a common sight to see a Ford V-8 Truck breezing along to market with a load of hogs or cattle or corn or wheat. That's what you naturally expect to see it doing.

But that's the easiest part of the truck's job. Get back off the roads to see the Ford V-8 Truck really at work. You'll find it on the job regardless of roads or loads. It's out in the fields just like any other farm implement. It's busy doing a little of everything—doing it

quicker, more economically. That's the way it makes good on the farm—keeping busy.

Today, there's a Ford V-8 Truck for any farm use. Among the many different body and chassis types, you'll find the piece of equipment that can do a lot of different jobs for you. Check this with an "on-the-job" test right out in your own fields or roads and with you or your hired hand at the wheel. Your Ford dealer will be glad to make arrangements.

Ford Motor Company, builders of Ford V-8 and Mercury Cars, Ford Trucks, Commercial Cars, Station Wagons and Transit Buses.

FORD FEATURES FOR 1940

Increased engine and chassis accessibility • 3 V-8 engines—95, 85 and 60 hp • New Sealed-Beam Headlamps • Bigger batteries, larger generators with automatic voltage regulation • Battery Condition Indicator • Fan on crankshaft (except C.O.E.) • Larger front axle on regulars • Full-floating rear axle with straddle-mounted pinion—ring-gear thrust plate • Semi-centrifugal clutch • Big hydraulic brakes • Worm-and-roller steering • Needle-roller bearing universal joints • Ford Engine and Parts Exchange Plan.

An Overwhelming **VOTE OF CONFIDENCE!**

More Than 96 Out of Every 100 Members

Give Evidence of Their Faith in League Principles

MORE than 96 out of every 100 members of the Dairymen's League expressed their full confidence and belief in the rights and principles for which League membership has fought. When the founders of the Dairymen's League built the organization, they put in the very wise and democratic provision that any member, for any reason, could withdraw from membership between February 12 and February 28. This year, more than 96% of the members kept their contract. This is one of the smallest withdrawals in the history of the League.

This picture of confidence is particularly important right now, for it shows that the members of the League understand that their organization is fighting for their homes and their well being. They have not believed the many untruths nor propaganda spread by those who would like to see the League weakened. They appreciate what the League and other organizations have been able to accomplish during the past three years.

More and more, League members are recognizing the battle that has been put up by their organization for nearly 25 years. More and more, League members see their organization as

representing the AMERICAN WAY in the handling of the milk problem.

For years, these members have known a **STEADY MARKET — CERTAINTY OF GETTING THEIR CHECKS — HONEST WEIGHTS AND TESTS**. For many years these members have realized that collectively they have been powerful enough to battle for their just rights.

The thousands of farmers who own, operate and manage this organization, see in its collective quarter of a century fight for a living price for milk, the only way they can protect the rights of their home and family.

This vote of confidence — more than 96% — is a tribute to the way this great organization has carried on the farmer's battle. Every member has a right to feel proud of this accomplishment. And every member should stand fast in the struggles ahead — struggles launched by opponents, which if successful, would tear down the big things we have built.

Yes — more than 96% of our members have said — **"THE LEAGUE STANDS FOR THE AMERICAN WAY, AND THAT IS MY WAY."**

THOUSANDS OF FARMERS WHO OWN, OPERATE AND CONTROL THE DAIRYMEN'S LEAGUE

What Does Mayor LaGuardia Want?

New York City Can Dictate Sanitary Regulations, But Producers Must Set Milk Prices

By A. C. PILGER,
President, Genesee Milk Producers
Cooperative.

ON JANUARY 13, 1940, Mayor Fiorello H. LaGuardia delivered a radio address urging city consumers to buy Grade B milk. The industry has long recognized that Grade A milk has higher standards than Grade B milk in the following respects:

1. The bacteria count must be lower.
2. The butterfat content must be higher.
3. The elapsed time from farm to consumer is twelve hours less.
4. Bottles must be provided with lip covering caps.

Despite these differences in standards between Grade A and Grade B milk, the Mayor in his radio address said, "Buy Grade B milk; it is just as good, it is just as wholesome, it is just as sanitary as Grade A milk."

The buying public has generally been free in this country to be the sole judge in deciding upon what quality of products it chose to spend its money; and so, according to taste or income, some buy \$3.00 shoes and others \$15.00 shoes; some buy low-priced cars and some buy high-priced cars; some have bought Grade B milk and others have bought Grade A milk.

During the past, Grade A buyers in New York City have been sufficient in number to return to dairy farmers an annual premium of \$3,500,000 to recompense dairymen for additional investments of labor costs required to produce sufficient high standard Grade A milk to meet consumer demands.

After reading the Mayor's radio address and trying to understand his objective, one naturally comes to the conclusion that the Mayor is trying to accomplish one or more of the following results:

1. Prevent the consumer from selecting the quality which his taste and income dictates.
2. Prevent the farmers from earning a reasonable return on investments which they have already made in order to meet the consumer demands.
3. To pose as a champion of consumers by making it appear that he is getting something for them without cost.

As we look into this matter further, it becomes more and more apparent that number three is the Mayor's real underlying purpose, for if that were not so, and if indeed the Mayor was sincere in effecting a saving, why would he not make the open statement that both farmers and distributors would no longer be required to maintain Grade A standards in production and distribution, and that Grade A producers could relax their standards down to the Grade B level?

In studying the Mayor's radio speech and press releases on this subject, we find not one word from the Mayor which would bring comfort to producers on account of lowering of standards and reduced cost of production. On the contrary, the underlying

thought seems to be that through clever propaganda and through the all-powerful City Board of Health, producers will be required by next September to meet Grade A standards at Grade B prices.

There is no question in our minds that the Mayor and the New York City Board of Health are clothed with ample authority to stipulate the quality of milk which will be permitted to enter that city, and it is a generally recognized principle that the nearer any article is required to approach perfection, the higher will be the cost of its production; and we believe this applies equally whether the article be milk, a pair of shoes, rifles, or watches. And so we, as farmers, say to the Mayor: "You may set the standards but we will set our price for the product; and if wisdom is not exercised in setting the standards, the resulting price to the consumer will be unnecessarily burdensome; and the responsibility,

therefore, will rest upon those who set the standards."

Now, a word about the article published in the Syracuse Post Standard on February 12, 1940, captioned NEW YORK CITY DEMANDS VOLUME GUARANTEE FROM NEW YORK DAIRIES. We need not tax our memories to recall the chaotic conditions in the milk business when the most distant points in the milk shed were shipping large volumes of fluid milk to the Metropolitan Market. To correct this evil, common sense dictated that milk produced nearest the city should be shipped in as fluid milk, milk more remotely located should reach the city as fluid cream, and the most distantly located milk should stand by as a factor of safety to be drawn upon in periods of shortage and through the remainder of the year would reach the city in manufactured products.

The Mayor and his Board of Health are apparently decreeing that unless these distant plants ship 60 per cent of their product to the city in any one month, they will be barred from the city entirely. This means, simply, that

the Mayor would have his consumers buy thousands of tons of European and South American products in the form of butter, cheese and canned milk products manufactured under conditions over which his Board of Health has absolutely no supervision; while a dairy plant in the State of New York, supplied by New York State dairymen who are taxpayers in the state and who have all complied with the Board of Health's inspection of regulations, is to be excluded from the market because in some one month 60 per cent of the output of that plant was not delivered to the City of New York in four of the nine classes of products recognized under our state and federal orders. It is most difficult to understand the Mayor's objective in this new decree. From where we sit, it does not even appear to be astute politics, because, after all, the dairy farmers of the State of New York have a vote in this state, whereas foreign butter and cheese manufacturers do not.

Finally, regardless of decrees and political maneuvers, the New York State dairy farmer has demonstrated his ability to produce an adequate supply of high quality milk, but does not and never will possess the power of magic by which he can meet more and more complicated and rigid sanitary requirements and transportation burdens without a proportionate increase in costs of the finished product delivered to the City of New York.

BUILDINGS THAT INCREASE Dairy Profits!

FREE
BLUE PRINTS AND
MATERIAL LISTS
AT YOUR
4-SQUARE DEALER

FEATURING
THE
LAMINATED
RAFTER

The 4-SQUARE MILKHOUSE

The 4-SQUARE SILO

Every detail of this 4-Square Farmstead Barn has been carefully engineered for long life and economical erection. Using the curved laminated rafter, a combination rafter and stud which runs from concrete sill to roof peak, engineers have designed for greater strength and wind resistance. This barn is easy to build with the 4-Square Blue Prints. The 4-Square material lists specify the correct grade and species of lumber to use. 72% of the 4-Square lumber goes into the barn without needless sawing or fitting. That's a saving of time and material. See the 4-Square Farm Service at your 4-Square Dealer. See designs for nine other barns, four types of roof construction — designs for milk houses, silo, milking shed. In all, there are 216 designs of all kinds and types of farm structures.

The 4-SQUARE FARM BUILDING SERVICE

216 designs of Farm Buildings and Equipment designed by engineers — complete with blue prints and material lists. There is a size and type of building to suit your program and preference at a big dollar saving.

THIS BOOK IS FREE

USE THE COUPON

Farm Homes and buildings for every type of livestock program — buildings for grain storage, milk houses, machinery sheds. Before you build or remodel, see the 4-Square Farm Building Service. You can build better and more economically. With the free Blue Prints, Material Lists and Ready-to-use 4-Square lumber, correctly designed farm structures, built with 4-Square lumber, have far longer life and can be economically remodeled to suit new needs.

"Greater Farm Profits from Better Farm Buildings" describes the 4-Square Farm Building Service and shows how agricultural engineers design better, more economical farm buildings. Write for a copy. It's free.

4-SQUARE LUMBER

Weyerhaeuser 4-Square Lumber

THIS SIGN IDENTIFIES YOUR 4-SQUARE LUMBER DEALER

Weyerhaeuser 4-Square lumber is available in a wide variety of grades and species for every structural purpose. Thoroughly seasoned, smoothly surfaced, it comes in exact lengths and already squared on ends and edges. Because it is ready-to-use, 4-Square lumber reduces building costs.

NORTHEASTERN *Slants* ON THE *National* NEWS

"None of Its Business"

NOW GOING on in Washington is battle over whether Federal Government has the right to force individuals, under threat of fine and imprisonment, to give census enumerators details of their private incomes, home mortgages, and marital state. Senator Charles W. Tobey, Republican, of New Hampshire, is leader of fight. As we go to press, Senate Commerce sub-committee has favorably reported to main Commerce committee his resolution which calls for striking out of such questions.

Also, in New York State last week, State Senate unanimously adopted resolution requesting Congress to amend Federal Census law to eliminate the personal questions, and to abolish criminal penalty for refusing to answer or for giving false information to census takers.

Whether United States Senate will finally vote to drop these questions from Census remains to be seen. Most bitterly attacked ones are Nos. 32 and 33 of the population schedule, which require all persons to state the amount of their 1939 income from salaries and wages up to \$5,000, and whether they received an income of more than \$50 from other sources. Also disliked are questions which ask whether bathtub is shared with other families; amount of mortgage; frequency and amount of mortgage payments; type of mortgage; and a question on the marital state of each individual.

Arguments against questions are that census takers are politically appointed, and are usually local persons who may reveal intimate secrets they learn about their neighbors; and that asking a man how much he earns and whether his house has a bathtub or mortgage on it is an invasion of privacy and an infringement of the Bill of Rights.

Census Bureau officials, on the other hand, claim that questions are proper, legal, and necessary; that they have been asked in some form or other in former years; that farm census has had an income question for years, and that the information about incomes of city folks and housing has been asked for by business interests in order to get a picture of national needs and future markets. Also, they stress that information gathered will be held confidential, and that sole function of Census Bureau is collection and tabulation of basic facts about nation's population, resources, and business activities.

SLANT: Senator Tobey is right! Many of the questions asked in the census are none of the government's business. We have wired Senator Tobey the commendation of *American Agriculturist* for standing up for the rights of the people. A man's home is his castle. The makers of our Constitution added the Bill of Rights just to make sure that government in the United States should not violate personal privilege.

A Good American

THE FAMILY of Benjamin Mason, a Philadelphia negro, had been on relief for quite a while—long enough to receive over \$2,000 in relief payments. Recently the Masons struck oil, or rather Benjamin Mason picked the lucky horse in the Irish Sweep-

stakes. Here's how the Masons used their windfall:

First, Benjamin Mason paid back every cent he had received from relief agencies—\$2,100 in all. Then he set aside \$57,000, a tidy sum, for government income taxes. Then he bought a modest home for his family, and now he is busy spending the rest of his prize money on turning a whole block of dismal Philadelphia slums into a model block of low-rent homes for people of his race. When the work is done, there will be six one-family homes of six rooms each, and 60 apartments of from two to five rooms. All will be centrally heated, air-conditioned, and insulated, will have indirect lighting and refrigerators. Hats off to Mr. Benjamin Mason!

More Farm Schemes

EITHER before Congress or proposed by various "government farm relievers" are the following four schemes for helping agriculture:

1. Income Certificate Plan. This is just another name for processing taxes, which Supreme Court declared unconstitutional. It is advocated by Secretary of Agriculture Wallace.
2. Direct government appropriation of \$400,000,000, or more, to bring farm prices up to parity. Cash to be raised by a manufacturers' sales tax on articles now protected by tariff.
3. A plan to make loans to producers on farm products at full parity prices. Under this plan, government would soon own millions of dollars worth of farm products held in storage. This great mass of surplus products held in reserve would always act to bear down prices of farm products.
4. Straight price fixing of farm products consumed in this country. This plan would undoubtedly be opposed by consumers.

SLANT: Some politicians never learn from sad experience! Almost all of the farm schemes of past years have not only failed but have caused tremendous losses and held up recovery. If some statesman would lead in establishing a plan to make the dollar honest, so as to put producers of basic commodities on the same basis as other business, and otherwise leave the farmer to work out his own destiny individually and through his cooperative associations, prosperity would soon permanently return to rural America.

A 70-Million-Dollar Industry

AMERICANS ought to be a lot healthier than they were 20 years ago. Reason: Since 1919 there has been a spectacular increase in production of fresh vegetables for winter markets. Twenty years ago, nine southern States had approximately 232,000 acres in vegetables. Last year these same states had about 1,100,000 acres in vegetables. Figures are from February report of Federal Bureau of Agricultural Economics, which estimates that raising of fresh vegetables for winter markets has become a 70-million-dollar industry.

Reasons why folks are eating more fresh vegetables the year around, says Bureau, are:

1. Sharp rise in consumer purchasing power in northern industrial cities

during and following the World War.

2. Collapse of prices of the more staple agricultural products in the early '20s and '30s forced more producers into winter vegetable production field.

3. Development of heating and refrigeration facilities for vegetables in transit from farm to market.

4. Emphasis which has been placed upon vitamin content and health-promoting qualities of fresh vegetables.

SLANT: Development of frozen foods process is enabling northeastern farmers to cut into market for winter fresh vegetables, which southern states have been having all to themselves.

Farm Boys Using Production Credit Associations

MORE THAN 1½ million dollars has been loaned during past four years by Production Credit Association to finance 4-H Club and Future Farmer projects. Acting Production Credit Commissioner C. R. Arnold reports that last year alone more than 8,000 boys borrowed \$584,000 to finance baby beef, dairy, poultry, corn and other projects. Borrowing was done under supervision of teachers of vocational agriculture, county agents, club leaders and other farm leaders.

Repayment record of these boys has been good, Mr. Arnold reports. Last year, four out of the twelve Farm Credit districts showed no losses whatever from such loans. Many of the boys who borrow are not only building up livestock, machinery and tools which will enable them to get a better start when they begin farming, says Mr. Arnold, but also they are acquiring skill in the use of credit. For first time last year, 25 groups had their own loan committees which decided whether or not loans should be made to applicants.

American "Beans" for Finland

DURING fortnight, Congress passed and President Roosevelt signed a bill which will allow hard-pressed little Finland to borrow up to 20 millions from us, but money can be used only for purchase of civilian supplies, such as wheat and cotton. Finland has been pleading for loan to buy guns and warplanes, desperately needed in her uneven fight against Russia. One Congressman, on side of those who favored a loan without any strings on it, shouted during debate on bill: "Finland asks for bullets and we give her beans!"

It is being pointed out, however, that Finland can probably get around the restriction by exchanging American "beans" for war supplies made in France, Britain, and Scandinavia.

In spite of American financial aid, Finland's present prospects for success in her struggle with Russia look slim. Superior numbers of Russian troops have forced back the Finns and cracked their famous Mannerheim Line of fortifications. Furious fighting now in progress on three Finnish fronts is described as a death struggle by one newspaper correspondent who is on the spot.

AMERICAN PEACE MOVE

Most interesting job right now must be that held by Under Secretary of State Sumner Welles, whom President Roosevelt dispatched to Europe during fortnight to size up chances for peace. His first stop was in Rome, where he talked with Premier Mussolini and Foreign Minister Ciano. His second big appointment was with Hitler and Company in Berlin; and before his re-

turn, he will hear what French and British leaders have to say. Though purpose of Mr. Welles' visit is said to be "solely for the purpose of advising the President and Secretary of State as to present conditions in Europe", some believe that what he tells the President may influence third-term issue. They say that if it looks like a long war, with possibility of this country being eventually drawn into it, President may feel that he has a chance for reelection by voters who would hesitate to change horses while war threatens.

Faster Freight Trains

AVERAGE SPEED of freight trains in 1939 was 62% faster than in 1920. Now many freight trains are being operated on what were formerly passenger schedules. Average distance travelled per freight train per day in 1939 was 401 miles. In 1920, average was only 247 miles.

Increased speed of freight trains has resulted in time savings, ranging from hours to days, in freight movements.

Last month there was announced a new device which will still further speed up freight shipments. Known as a "rail-truck unit", it consists of a device which transfers a demountable truck body from a trailer to a flat car, or vice versa, in 90 seconds. Truck is placed parallel to the train, the truck driver presses a control button, and presto! the body travels along an endless belt conveyor to the train, along the top of which runs a series of rails. The motor truck supplies the power. This new wrinkle is expected to give railroads the edge on trucks in moving much freight, and will cut the cost of transferring contents of freight cars to motor trucks.

Record Apple Movement

NEW YORK and New England Apple Institute reports "a record-breaking movement of apples out of cold storage during January." January apple movement from New York State cold storages was about 1½ million bushels compared to a previous five-year average January movement of only about 800,000 bushels. This is 60% above the five-year average, and is positively the highest on record for any similar period.

Out of New England storages there was a January decrease of apples in storage of 36%.

Most of these apples went directly into consumption, thanks chiefly to publicity and advertising conducted by growers through the New York and New England Apple Institute. Splendid cooperation was had from chain stores and independent groceries.

Biggest Cheese

IF ALL the cheese made in this country and eaten by Americans were molded into one big cheese, it would be found to be nearly twice the size of such a cheese for 1920. Twenty years ago, the per capita annual consumption of cheese in United States was about 3½ lbs. Today, it is over 6 lbs. per person, on the average.

Cheese began to be a success in this country when the industry found out how to process it and make it more appealing to housewives. Stores are now filled with a variety of cheeses, put up in small, attractive packages. Modern advertising did the rest.

In order of importance, the top cheese-making states today are: Wis-

consin, New York, Illinois, Indiana, Oregon, Texas, Ohio, California, Michigan, Minnesota, Idaho, and Missouri. In 1920, Wisconsin, New York and Ohio made most of the cheese eaten, but in 1938 there were 13 southern states turning out a total of 60 million lbs., and 12 states west of the Missouri which made more than 70 million pounds.

Cheesemaking in southern and western one-crop states is said to be partly a development of AAA policies. Many growers in those states have naturally turned to raising some dairy cows on acres which government has paid them to divert from cotton or tobacco and plant to some soil-conserving crop.

SLANT: Time was when northern New York was one of the greatest cheese-producing sections in the world. The quality of its cheese was famous everywhere. But with the development of the fluid milk industry, cheese making in the Northeast has declined in spite of the larger national market. However, many leading dairymen are now coming to believe that northern New York could again manufacture great quantities of cheese if steps were taken to make it again famous for its quality, and properly to advertise and sell it.

Freeze Your Own

COMING rapidly to the farms is this new business of freezing fruits, vegetables and meats. A number of commercial cold storages are offering refrigerator lockers for rent, and new refrigerator warehouses are being rapidly built, with lockers for quick freezing and storing. Commercial companies also are offering small refrigerated containers for storage of foods on farms.

For more information on quick freezing, write to Dr. D. K. Tressler, or Clarence DuBois, of the State Agricultural Experiment Station at Geneva, New York.

SLANT: No single invention of recent years holds as many possibilities for better living on the farm as does this new process for freezing fruits, vegetables, and meat, and holding them in a fresh state indefinitely.

Good Books to Read

NEWS IS MY JOB, Edna Lee Booker. Seventeen years as a correspondent for the International News Service, and as the wife of a prominent Shanghai business man, have given the author unusual opportunities to go behind the scenes in Chinese homes, small villages, and in the camps of the war lords. Modern Chinese history is brought to the reader in a colorful, vivid account of her experiences.—The McMillan Company, New York. \$3.00

Good Movies to See

SWISS FAMILY ROBINSON. For the first time this story, written in 1812 by Johann David Wyss for the amusement of his children, appears on the screen. It portrays the adventures of Wealthy William Robinson, his wife and four sons—a fop, a bookworm, a fighter, and a small child. Robinson dislikes the way the boys are being brought up and sails with them for Australia. On the way the ship is wrecked and the crew takes the only lifeboat. The family build a raft, reach the island, find an abundance of game and fish and fruit, and the consequent responsibilities develop many hitherto unknown characteristics in the boys. Finally a ship appears and offers them a passage back to England. Two of the boys take passage back with their father, the others remaining on their island home.

The Greatest Combine of Its Size on the Market McCORMICK-DEERING 6-Foot No. 61

ONLY THE McCORMICK-DEERING
No. 61 GIVES YOU ALL OF THESE
FEATURES IN A 6-FOOT COMBINE

• Light or heavy, short or tall, down or tangled—no matter what condition the crop is in, you get the best results when the 6-foot McCormick-Deering No. 61 Harvester-Thresher is in the field. Its outstanding work at the cutter bar is matched by the efficiency of its threshing unit—clean, positive separation that gets the most out of the crop.

The No. 61 benefits the whole family. It saves from 12 to 15 cents a bushel over the binder and thresher method; it permits harvesting and threshing when the crop is just right; it saves the grain; it does away with the big threshing crew, saving on food and work in the kitchen. These are just a few of the things the No. 61 does for its owners. Any way you figure, it puts more money in the family pocketbook. Let the International Harvester dealer tell you *all* about it. Other sizes also, up to 16-foot cut.

INTERNATIONAL HARVESTER COMPANY
(INCORPORATED)
180 North Michigan Avenue Chicago, Illinois

- ① Patented open-end auger.
- ② Rub-bar cylinder. Does not chop straw. Simplifies separation and is easily adjusted.
- ③ Straight-line threshing. No right-angle turns or bottlenecks to cut capacity.
- ④ Extra-value construction.
- ⑤ Rotary, 3-section, all-metal straw rack.
- ⑥ Designed for engine operation as well as power drive.
- ⑦ Simple to operate and adjust.
- ⑧ Handles all small grains and seed crops.

Down the Alley

(Continued from Page 13)

to bring more acreage into production
be reconciled with payments to keep
acreage out of production?

It doesn't cost you any more to feed
out the feed that you raise yourself
than it does for you to market that
feed. Please think that over.

Every farmer must, of necessity, be
an individualist. In this country, farms
vary so in soil, topography and loca-
tion that farming can never be suc-
cessfully regimented.

The national budget must be balanc-
ed before we can even expect any pros-
perity. The national budget has no
great effect on prosperity, whether
balanced or not. Take your choice.

Forty per cent of the livestock com-
ing to the Buffalo Stockyards for meat
purposes originates in New York State.

One farm cooperative can never com-
pletely take the farmer out of his
troubles, but all cooperatives, working
together, could do much.

Do not rant about a cooperative. It
is yours. If there is something about
it that you do not like, do your part
to have it thrown out, for you can and
should make it function for you.

It's the function of the government
to help the farmer, not to take over
and run his business.

K-R-O KILLS RATS ONLY

Remarkable Success

Raising Baby Chicks

"Dear Sir: I see reports of so many losing their little chicks, so thought I would tell my experience. I used to lose a great many of the little downy fellows from bowel troubles, tried many remedies and was about discouraged. As a last resort I tried Walko Tablets. I used two 50c boxes, raised 300 White Wyandottes and never lost one or had one sick after using the Tablets and my chickens were larger and healthier than ever before."—Mrs. C. M. Bradshaw, Diagonal, Iowa.

You Run No Risk

Buy a package of Walko Tablets today at your druggist or poultry supply dealer. Give them in all drinking water from the time chicks are out of the shell. Satisfy yourself as have thousands of others who depend on Walko Tablets year after year in raising their little chicks. You buy Walko Tablets entirely at our risk. We guarantee to refund your money promptly if you don't find them the greatest little chick saver you ever used. The Waterloo Savings Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee. Sent direct postpaid if your dealer can not supply you. Price 50c and \$1.00.

Poultry in Hawaii

By L. E. WEAVER

(EDITOR'S NOTE: As many of you know, Lee Weaver is spending a year in Hawaii, where he is teaching in the University. On an exchange arrangement, Professor Bice, of Hawaii, is spending a year at Cornell.

SIX MONTHS ago I arrived in this "Paradise of the Pacific". Now I am ready to tell about poultry keeping in Hawaii. I admit that is rather presumptuous, and some statements may be subject to later revision, but I find that chickens are still chickens, and still eat and act like chickens, regardless of geography. The ways in which Hawaiian poultry-keeping differs from that of the Northeast are due to differences in climate, latitude, and environment. There are some interesting differences.

L. E. Weaver.

I am told that for years it was not possible to keep poultry here successfully, although it was tried over and over.

Then came the success of the Experiment Station's trials with wire floors. Since then the industry has increased steadily. The use of wire floors in laying pens, sun parlors, and brooders is practically universal. Naturally the house with several stories is not adapted to such conditions and does not exist.

Wire floor poultry keeping has succeeded where chickens-on-the-ground failed, and the reason is that this is a better way to control parasites. We in the Northeast think we have a bad parasite problem when we have to contend with coccidiosis, one or two varieties of tape worms, and one or two kinds of round worms, body lice and red mites.

Now add to that list several varieties of tape worms, a harmful variety of cecum worm, the eye worm, gizzard worm, two varieties of stomach worm, and tropical mites which live on the birds, and you have the Hawaiian version of the parasite problem. Strangely enough the red mite does not seem to be so numerous or so annoying here as back home. In one way winter is a great help to a poultryman in the Northeast. It becomes a period of suspended hostilities. Most of the parasites and their insect hosts become inactive. Some may die. With year-round summer conditions no such armistice is ever declared in Hawaii. Hence the necessity of wire floors.

Even with wire floors it is not un-

usual to find birds with eye-worms, tape worms, flukes and cecum worms. This does not surprise you when you know that the eye worm is carried to chickens by roaches. And the others by beetles, earwigs, snails and flies. Wire floors cannot prevent these insects from crawling or flying into the pens. They do seem to prevent harmful numbers from getting in.

I have often told New York poultry groups that fowl pox is so easily controlled by vaccination that it has ceased to be a problem. That is not true here. In spite of vaccination it is a very real and serious problem. The reason is that it attacks baby chicks. I am told that the explanation is mosquitoes, but I feel that there must be more to it. It is true that when the chicks are protected behind mosquito-proof screens they don't get the disease. I will grant that proves that mosquitoes carry fowl pox to the chicks. But there are no more mosquitoes here than back home. Why should the chicks here be more susceptible? At any rate it is customary here to vaccinate all chicks at 2-3 weeks of age (also to screen brooders). Tests of vaccination of day-old chicks are being run, and have shown some promising results.

Little Difference in Feeds

Practically all feeds are purchased from the mainland. Recently I took my class of 40 Freshmen to visit the Waldron Feed Mill in Honolulu. It is as free of dust, as thoroughly-equipped and modern in every way as the feed mills I have visited in New York state. Talking with Mr. Luck, the formula man, was just like talking with C. E. Lee, or Vic Heiman, or Bill McMillan. To him, fish meal is not just fish meal, but a way to put high quality protein into a ration at a reasonable cost. He spent a lot of time explaining to the class why a meal made from the whole fish is better than one made from the heads and trimmings; why a vacuum-dried meal is superior to a flame-dried meal. We saw some liver meal that comes in from New Zealand and supplies "ribo-flavin" to the rations at a cost much below what it would be in dried milk. There are several other large feed concerns. Some of them bring in their mashes from the mainland, and have no local mill.

Practically everyone uses commercial poultry feeds. The ocean freight adds about \$7.00 per ton to the Pacific coast price. To offset that, egg prices are better here.

Why don't they use island-grown feeds? That is a fair question. They boast that anything can be grown here. I wondered about that myself until I

(Continued on Page 23)

John Beadle, Jr., of Cambridge, Washington County, New York, and his 4-H poultry project. This small homemade range shelter has wire netting sides and no floor, and was moved by the family car from place to place in an alfalfa field. At eight weeks of age his White Leghorns weighed 2 lbs. and his Rhode Island Reds 3½ lbs. John Beadle, Sr., is a Century Farmer, having been so named by the New York State Agricultural Society who, each year, give this designation to several farmers at the annual meeting of the Society in Albany.

START CHICKS ON
"NOPCO XX"

START chicks right—on a well-balanced mash rich in Vitamins A & D. A dependable source of these vitamins is "Nopco XX" Fortified Cod Liver Oil.

"Nopco XX" fed regularly at recommended levels is flock protection against possible Vitamin A & D deficiency. No waste—no dangerous variation—GUARANTEED to contain 3000 U.S.P. units of Vitamin A and 400 A.O.A.C. units of Vitamin D per gram.

Don't take chances. Make sure your chicks get their full quota of Vitamins A & D by feeding "Nopco XX" daily. High in potency, it goes farther than ordinary oil and saves you money.

Thousands of mill-mixed mashes contain "Nopco XX"—identified in many by the familiar Red Top guarantee tag. Also available from dealers in handy 2 and 5-lb. cans.

*"Nopco XX" is a registered trade-mark of National Oil Products Company

Early Season Poultry Questions

Cleaning Brooder Houses

How often is it necessary to clean the litter from a brooder house?

We sometimes hear that the brooder house should be cleaned out as often as once a week, but I prefer to let conditions govern this. A good rule is that a brooder house should be cleaned out whenever it gets damp. If, through good management, you can prevent moisture from rising through the floor, slopping of water fountains, and the entrance of rain through windows and if you have a ventilation system that will take off the moisture given off by the chicks so that the litter stays dry, the danger of disease spread is at a minimum.

On the other hand, if the litter gets damp or wet twice a week, then the house should be cleaned twice a week.

Keep Mash Fresh

Is it true that hens will eat more mash when they are fed in small hoppers so the supply must be replenished frequently?

Yes, hens certainly appreciate fresh feed, and that apparently is one reason why the old storage type of hopper containing a week's supply has gone out of style. The poultryman who has an eye for detail has also found that stirring up the feed in the hopper occasionally will induce the hens to eat more. It is a good plan to let the birds clean out the hoppers once every day, but it is up to the poultryman to see that they don't stay empty very long.

Breeding Ration for Turkeys

Is a breeding ration for hens suitable for feeding to my breeding flock of turkeys?

Probably not, as it is generally agreed that a breeding mash for hens contains too little protein and riboflavin to give best results for turkeys. One reason may be that turkeys usually eat more grain as compared to mash than do hens. A number of companies put out feed designed especially for turkeys.

Brooder Pneumonia

What is brooder pneumonia?

The scientific term for brooder pneumonia is aspergillosis. It is caused by a fungus which is found on moldy litter or spoiled feed. Chicks breathe the fungus in their lungs, and it grows there. The best way to prevent it is by being sure that your litter is clean and your feed fresh. The disease does not react very well to treatment.

HARDWARE

SPECIAL ON AXES TODAY

GRAHAM HUNTER

"D'you suppose these are the 'Rome-Berlin Axes' we keep hearing about?"

If THEY COULD ONLY SPEAK!

● Every young animal and bird on the farm would tell you of benefits when the feed ration contains dry skim milk. Its natural balance of complete proteins and minerals, vitamins and milk sugar results in greater feed efficiency.

There is no substitute for dry skim milk results in starting chicks profitably. Gain in weight, feed consumption and pounds of gain per pound of feed increase with increasing amounts of dry skim milk in high grade chick mashes.

Investigators in swine nutrition now indicate that more milk may be used profitably in pig meals.

Calf feeds, for wet or dry feeding, containing adequate amounts of dry skim milk are the salvation of many a dairy herd and its owner.

And so on down the line: Turkey poults, ducklings and young game birds; lambs, kids and colts; rabbits and other fur-bearing animals—even fish and bees—all benefit when dry skim milk is used intelligently as part of their ration.

Be sure that your dealer supplies you with feeds containing dry skim milk. Use it in all young stock feeds to get them off to a good start.

How Can I Stay in the Poultry Business?

(Continued from Page 1)

up with a letter, urging them to join in the campaign to increase the consumption of eggs not only during the Springtime Egg Festival, but permanently. Point out to them that their success as business men depends upon the success of farmers; point out also that they can get back of an egg consumption campaign, because eggs are a cheap and necessary food. In particular, get business men to put up posters in their places of business, and more prominently to display eggs so as to attract customers.

Next Step—Copies of large, attractive posters have been sent to the leading grocery stores of America. It should be your personal, individual responsibility to see that your local merchants get and put up these posters in their windows. If stores have not received posters, YOU write IMMEDIATELY to International Baby Chick Association, 3718 Broadway, Kansas City, Missouri, and ask them to send a supply of posters to merchants whose names and addresses you enclose. Posters are free to stores. Local radio stations and newspaper editors have been sent news articles, recipes, and other publicity about eggs. Call on your local editor and the radio announcer, or telephone them, asking their cooperation in printing and announcing egg facts. If they have not received any material, write for them a short article about the Festival, and send them this issue of *American Agriculturist*, calling their attention to this article, to the editorial on eggs on page 4, and to the full page of tested egg recipes on page 24. Read this material yourself and use the recipes.

To Those Who Haven't Time—You say you haven't time for all of this. All right! Then you haven't time to be in the poultry business. Let's put the egg industry of the Northeast back on the map. *American Agriculturist* is giving thousands of dollars worth of space and time to help. Can we count on your cooperation?

Standing at the left is Robert Tillson of Cochituate, Massachusetts. Robert won the highest individual standing at the Judging Contest for college students at the World's Poultry Congress last summer. At right is Raymond Parkhurst, head of the Massachusetts State College Poultry Department. They are standing in front of the Massachusetts state exhibit at the Congress.

WENE OFFERS DOUBLE SAVINGS New Low Prices Plus Special Discounts. Giant Scale Production—6,000,000 chicks in 1939—enables WENE to effect economies and give greatest values in 20 years' history.

Early Order Discounts—On orders mailed before March 20th, accompanied by deposit of 1c per chick, deduct 50c per 100 chicks on Utility and Select Matings and \$1.00 per 100 on Super Matings. On orders accompanied by cash in full deduct additional 50c per 100 on all matings. NO Discounts allowed on Leghorn Sexed Cockerels or Heavy Bred Pullets.

Poultry in Hawaii

(Continued from Page 20)

knew the answer. Well, why don't all Northeastern poultrymen raise their own feeds? The answer is exactly the same. They make more income by putting their land and time to other uses. If you could get a gross return of \$800 to \$1000 per acre for sugar cane you probably would not plant your land to wheat or corn. Neither do the farmers of Hawaii.

As far as possible native by-products are being used, but they do not make a very large part of the total feed bill. Pineapple-bran, a by-product of the canning industry, makes a good dairy feed, but is too high in fiber (20%) to make up more than 10% of a mash. Cane molasses is very cheap, and up to 7% of the total ration can be fed, and is fed. A local fish meal comes from a tuna-canning plant but the supply is too limited to be of importance. The experiment station has shown that laying hens relish avocados, bananas and cooked sweet potatoes, but as a rule these are too high priced to be used as chicken feed.

Well-Bred Stock is the Rule

A growing hatching industry supplies most of the chicks. There are only a few breeders, but they are maintaining a high standard of quality. Even the thousands of hatching eggs brought from the mainland come from the better breeding farms. The result is that you see very little "junk stock" on the larger plants. Everyone takes it as a matter of course that chicks will cost 15-20c at least.

Last year more than a million dollars worth of eggs and poultry came in from the mainland. That shows what a good market these people have. But they don't know it. They grumble about outside competition, but do nothing, (or at least very little) to improve the quality of their eggs, or their grading. That is nothing new to me. I once heard and saw all that in New York state, and not so long ago either.

The other day a "consumer" told me how he buys eggs at the store. First he picks up several cartons one after another and shakes them. He takes the one that rattles least. That means fewer small eggs. Then he buys only a half-dozen, picking out only the large ones, since he is paying for "large" eggs. I think that very soon the competition of well-graded eggs with high interior quality from the Pacific coast of the mainland will force an improvement in local methods of holding, and grading eggs.

"I can't recall the brand he uses. Let's see—have you ever smelled a stink bomb in a dump on a muggy day?"

Use More Eggs!

THE OLD nursery tale about the goose that laid the golden egg has always fired childish imaginations, and yet that miraculous bird was not nearly so rare as we used to think. Modern scientific research has made us aware that golden eggs are being laid daily by hard-working hens — eggs that are pure gold because they contain iron and vitamins very essential to the health of young and old.

Besides their great dietary importance, eggs are the "handiest" of all foods, for they stand ready to serve as the main dish in any meal, as salad, dessert, sandwich spreads, nourishing drinks for invalids, or as a binder between foods reluctant to be friendly. In fact there are so many delicious and varied ways to serve eggs that there is no excuse for saying, "I don't serve eggs often because my family gets tired of them." Try some of the tested recipes which follow, and the family will ask for more!

The main thing to remember in egg cookery is that they need a low temperature, whether cooked hard or soft, separately or combined with other foods. Keep always below the boiling point when "boiling" or poaching eggs. For omelets, use a thick pan, and have the oven moderate for any form of baked eggs.

Baked Corn Omelet

1 tablespoon butter
2 cups corn
4 eggs

1 tablespoon flour
¾ teaspoon salt
½ teaspoon pepper

Separate eggs. Beat whites stiff. Beat yolks until light and thick. Add flour, corn, and seasonings. Fold in beaten whites. Pour into buttered baking dish and bake in slow oven (325 degrees F.) about 45-50 minutes.

Poached Eggs on Apple Rings

For this dish the ingredients are eggs, apples, seasoning and fat for cooking. Choose apples that may be used without peeling. Plan 1 or 2 quarter or half-inch slices for each egg service.

Wash apples, core, then cut into slices crosswise at least one-fourth inch thick and not over one-half inch. Rub pulp with cut surface of lemon to prevent darkening if apples are prepared a short time in advance. Melt fat in pan, add apples and fry 2 or 3 minutes on each side. Slip eggs, broken from

the shell, over an apple slice. Season. Cover pan with tight lid and continue cooking over LOW heat until the eggs are set to the desired doneness. Extra apple slices cooked without the egg topping may be used for garnish. With broad spatula slip eggs on warm platter.

Unusual Scrambled Eggs

3 tablespoons butter
9 eggs
¾ teaspoon salt

¼ teaspoon pepper
¾ teaspoon prepared mustard
¾ cup thick, sour cream

Melt fat in skillet. Meanwhile beat eggs slightly, add seasonings and cream, and stir to mix thoroughly. Pour eggs into hot fat and cook with slow heat until done according to individual taste. Season more, if desired. Try this for any meal of the day: with tiny sausages and chilled fruit juice for breakfast, with sliced cold chicken, spiced prunes and potato chips for the Sunday night supper, or with asparagus or cauliflower or peas for luncheon.

In scrambling it is best to stop the cooking before the eggs are really done. The heat within the food and in the cooking utensil will continue to cook the eggs after their removal from the flame. Also, always serve on a warm plate, not hot or cold.

Baked Eggs and Rice in Tomato Sauce

1 cup uncooked rice
1 quart canned tomatoes
½ teaspoon salt
2 onions

¼ cup flour
7 eggs
¼ cup grated cheese
2 cups bread crumbs
¼ cup melted butter or other fat

Cook the rice in a large quantity of lightly salted boiling water for about 20 minutes, or until tender, wash in water, drain, and let steam and swell over hot water. Prepare a sauce by cooking the tomatoes and seasonings for 10 minutes, strain, and thicken with the blended fat and flour. Make a layer of the rice in a large shallow greased baking dish, drop the raw eggs carefully on the rice, pour on the sauce, and sprinkle over the top the grated cheese mixed with the bread crumbs. Bake in a slow oven (about 375° F.) until the eggs are set. Serve in the baking dish.

Scalloped Eggs and Onion

2 cups finely sliced onion
2 tablespoons fat
¾ teaspoon salt

6 eggs beaten
½ cup milk

Cook onions (covered) in fat until soft but not browned. Place in greased baking dish. Mix eggs, milk and seasonings and pour over onions. Set casserole in pan of hot water and bake in moderate oven until firm in

the center. Garnish with chopped parsley. Excellent served plain, or with a well seasoned sauce.

Eggs Yorkshire

4 hard or soft cooked eggs
2 eggs beaten
1 cup milk

1 cup pastry flour
½ teaspoon salt
1 teaspoon baking powder

Place casserole and fat in oven to melt the fat. Remove most of the fat to use in the batter, returning well-greased casserole to oven to heat thoroughly. Beat eggs and milk thoroughly. Add flour, salt, and cooled fat and beat mixture until smooth. Make a layer of the eggs (whole, halved, quartered, or sliced) in bottom of casserole. Pour in batter and place in hot oven until the mixture begins to expand and brown slightly, then reduce heat. The batter should puff nicely during the baking making an attractive uneven broken surface. Serve at once from the baking dish. The casserole should be about ¾ full before baking. A few nuts sprinkled over the batter before baking add a special crustiness and flavor. A well seasoned cream sauce, mushroom or tomato, may be served if desired.

Egg Cream for Vegetables

3 tablespoons butter
2 tablespoons flour
1 cup cold milk

½ teaspoon salt
Speck of pepper
2 egg yolks, beaten slightly
1 tablespoon grated horseradish

Melt fat, add flour, and stir until well blended. Add cold milk all at once and stir over heat until thickened. Cook gently 5 minutes over flame, or cover and set over hot water for 15 minutes. Remove from fire and pour, stirring constantly, a small quantity into the slightly beaten yolks and seasonings. Return to pan and heat to cook the eggs, about 1 minute. Add horseradish last.

Old-fashioned Lemon Pudding (Lemon Curd)

Grated rind of 1 lemon
½ teaspoon salt
6 tablespoons lemon juice

¼ cup butter (½ lb.)
1 cup sugar (½ lb.)
3 eggs* slightly beaten

* 6 yolks (½ cup), 4 yolks and 1 egg, or 2 yolks and 2 eggs may be substituted for the 3 whole eggs.

Place butter in pan over hot water to soften. Add remaining ingredients. Cook over simmering water stirring constantly until well thickened throughout and of good piling quality. Cool and store covered.

Uses for Lemon Curd

Cake filling: Layer cake; split angel or sponge cake; cup cakes (cut slice off top, hollow out center for filling, replace top and frost.)

Cookie and wafer sandwiches: spread over one, top with another to make a

By
MRS. GRACE
WATKINS
LUCKETT

sandwich; or top the filling with chopped coconut, nuts, or frosting.

Cream Puff filling: for tiny cream puffs to use as a mouthful to accompany beverages (use 1 teaspoon of the batter for baking). For average size cream puffs for dessert mix the filling with fruit.

Sandwiches: any kind of bread for a sweet sandwich. Wholewheat or brown bread is especially nice. Omit butter on bread.

Apple Meringue

8 apples
3 eggs
¾ cup sugar

½ teaspoon salt
2 cups milk
1 teaspoon vanilla

Core apples and bake until tender. Make custard of egg yolks, sugar, salt and vanilla. Pour over baked apples. Beat egg whites and two tablespoons sugar to a meringue; spread over apples and brown lightly.

Fruit Whip

Fruit whips can be made of any fruit pulp of pronounced flavor and color. Heat the fruit pulp to dissolve the added sugar, and combine while hot with the stiffly beaten egg whites so as to cook the eggs partially and give body to the mixture. After the fruit pulp has been combined with the egg whites and sugar, the mixture may be baked if desired. When baked in a dish surrounded by water in a very slow oven (225° to 250° F.) for about one hour, the whip should not fall, and may be served either hot or cold. Or, fruit whips may be served as soon as mixed without cooking.

Baked Caramel Custard

½ cup sugar
½ cup water
½ quart milk
¼ teaspoon salt

3 tablespoons sugar
1 teaspoon vanilla
7 eggs
Butter

Melt and stir the cup and a half of sugar in a smooth skillet over low heat until the sugar turns a rich brown color, add the water, continue to stir until a thick caramel sirup has formed, and remove from the fire. Heat the milk slightly, add the salt, 3 tablespoons of sugar, three-fourths cup of the caramel sirup, and vanilla, and stir into the slightly beaten eggs until well mixed. Butter custard cups, put in each about 2 teaspoons of the caramel sirup, fill with the custard mixture, put a small piece of butter on top, and bake on a rack in a pan of hot water in a moderate oven (350° F.) for 45 minutes, or until set. Test by inserting the point of a knife in the center of the custard. If it comes out clean remove the custard at once from the hot water. When cold turn out on individual plates, and the caramel sirup in the bottom of the cups will run down over the custard like a sauce.

Sunshine Cake

6 eggs, separated
1 teaspoon cream of tartar
1 orange or lemon rind, grated

1 cup fine granulated sugar
1 cup flour
Dash of salt
¼ teaspoon almond extract

Sift sugar four times; also sift flour four times. Beat egg whites stiff, but not dry. Add cream of tartar. Add sugar, rind, salt and flavoring. Beat yolks and add lightly to whites. Fold in flour and pour into tube pan. Bake ½ hour at 300° F., then at 325° F. for 20 minutes more. Invert the pan while cooling.

Maple Parfait

8 egg yolks
2 cups whipping cream

Beat egg yolks slightly, add syrup, and cook over hot water until mixture coats a spoon, 10 to 15 minutes. Then cool and fold in the whipped cream. Freeze in refrigerator tray 3 to 4 hours.

Resurrection

By Emily Estey.

I thought that they were dead,
(I loved them so!) —
The tulips that I planted
Long ago.

And, like poor doubting Thomas,
I had said,
They can't be living, for
I saw them dead!

But now that winter's storms
Are done,
I see their brilliance blowing in the sun.
And seeing, thus, at last I realize
That which seemed dead had yet the
power to rise;

And risen, lives untouched by storm
and strife:
Death is a door which leads from life
to Life.

No. 3179 makes both a baby's creeper and a little girl's dress. The button front dress allows little sister to dress herself. Pattern sizes 6 months, 1, 2 and 3. Size 2 requires 1 3/4 yards of 35-in. material, 1 1/2 yards ruffling for creeper; 1 3/4 yards 39-inch material, 1/4 yard 35-inch contrasting for dress.

TO ORDER: Write name, address, pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new spring fashion catalog.

Today in Aunt Janet's Garden

Uncover Plants Gradually

I TRY TO keep up with the weather by doing certain odd jobs as early as seems wise. The temptation is to uncover everything when the first really bright sunny day comes.

But I have learned that uncovering plants gradually is more to their liking; so I usually take off the heaviest part of the mulch by the middle of March and leave the lighter part to be dug or scratched in after the plants show themselves and there is no danger of cutting off their little heads.

If I were a rose gardener I should make a point of spraying the soil and plants with lime-sulphur or bordeaux mixture as soon as top mulch has been removed and before growth starts. A spray in time saves nine, in the case of roses! Dormant roses are the easiest to handle. As soon as freezing weather is over, established roses need to be pruned back to live wood, and more stems removed if large blooms are expected.

A mistake very easy for me to make is to get perennials divided before the ground is ready to receive them. Many of my chrysanthemums must be divided this season and ground will have to be dug and fertilized beforehand. This will not be easy in the established beds which I do not wish to disturb as a whole. I hope this year I may achieve a solid row of uniformly blooming *Amelia* chrysanthemums, which I have aimed at twice before and missed. Uneven conditions of light and shade and sprouts from different parts of the plants produced bloom at different periods.

Another item which I must keep in mind is "glad" bulbs. By March 24th or April 1st, the soil should be warm enough for me to put in my first planting of early blooming varieties. After that the planting should be at intervals of from 10 days to 2 weeks until July 1st in order to keep gladioli in our vases practically all summer and well into September.

Make Clothes Do DOUBLE DUTY

JACKETS vary this spring from the waist length bolero to full length coats; also they do double duty, as a separate jacket and again as part of a costume with dress or skirt.

Double duty garments and double duty patterns are right in line with the needs of today. In fact versatility is always an asset wherever it is found.

PRINCESS DRESS AND JACKET ENSEMBLE PATTERN No. 3185 features slim, young princess lines, close fitting through the midriff and with youthful flaring skirt. Soft shirring is flattering over the bodice; crisp white lace edging the neck and sleeves is decidedly spring-like. Sizes 12 to 42. Size 36 requires 3 3/4 yards of 39-inch material, 2 yards lace edging.

CREEPER AND DRESS PATTERN

"Yes, Ralph. Your electric shaver came today."

BE WARM and COMFORTABLE with a UTICA HEATING SYSTEM NO PAYMENT UNTIL FALL

STEAM or HOT WATER Radiator Heat Burn Coal, Oil or Wood

You can now enjoy comfortable radiator heat with a Utica Heating System for as little as \$10 a month and you may install now and make no down payment!

You will have a warm home for the rest of the winter, and for many years to come, and you may begin your payments next Fall!

Utica Radiator Heating Systems are especially designed to burn all types of fuel economically and efficiently, and with radiator heat your rooms will be warm and comfortable on the coldest days of winter.

A Utica Heating System will make your house a real home . . . warm and comfortable in the coldest weather.

That Barrel of Baldwins

By C. A. STEPHENS

"JUST IN TIME, boys, and not an hour to spare," the old squire said, when Addison and I drove in from the orchard with the last load of Baldwins. "There's a northeaster coming on; but we have got ahead of it."

All the afternoon the sky had been turning lead-colored; a raw chilliness was in the air; and as night fell, an owl, over in the wood-lot, began hooting—that dismal, low hooting that so often presages a storm.

Owing to the suddenness with which cold weather sometimes came on, apple-picking was never a matter about which we felt secure. It was always a two, and sometimes a three weeks' job with us, for we rarely got less than four or five hundred barrels from our trees.

But that year we finished picking just in time, and during the long storm of sleet, wind and rain that followed, we were comfortably packing our crop in the apple-house, with a cheery fire blazing in the fireplace.

Addison was culler, and had the culling-rack set breast-high, where he could run the apples one by one down a burlap spout into the barrels. Halstead carried the apples from the bins to the rack in a bushel basket.

The old squire always packed his apples with great care. Formerly he had done the culling himself, but for two years he had delegated the task to Addison, whose eyes he found were sharper than his to detect worm-holes, or the little dry spots of "bitter-rot" under the skin.

I had been promoted to the post of facer, in which my duties were to select fifty or more fine apples from every barrel, and arrange them, stem ends up, in circles, directly beneath each head.

"But I want every barrel of apples that goes from our farm to be an honest barrel," the old squire used to say to us. "Put just as good apples in the middle of the barrel as you do at the heads."

He himself was header. After Addison had culled and filled the barrel, and I had faced it, the old squire loosened the top hoops, forced the head down into the groove of the chimes with a clamp and screw, then nailed it

in place. The name of the packer, together with the variety and the grade of the fruit, was then stenciled on the head. Then the barrel was ready to go forth into the world's market—over the sea to Liverpool, or west to St. Louis, or even to California.

When the apples were very good, the old squire was accustomed to send a number of carefully packed barrels of Baldwins to old friends and acquaintances at a distance. Nearly always he sent to "Uncle Hannibal" Hamlin, who was then Senator from Maine. Mr. Hamlin's early home was but a few miles from the old farm. He and the squire had been boyhood friends and fellow students at Hebron Academy.

The Senator now lived at Bangor, when he was not at Washington; but he was wont to drive over to call on the old squire whenever he revisited his native county. It was with Uncle Hannibal that we young people partook of the fried pies one day when the old squire and grandmother were away from home.

I need hardly say that Senator Hamlin's barrel was a particularly good one. As a return courtesy, he used to send us the *Congressional Record* and all the more interesting government reports.

From fifty to sixty barrels a day were as many as we could pack. Ellen and Theodora sometimes came out to help cull and face, or put on the stencil. Altogether it was work that we liked, for generally we had a row of apples set to roast at the fireplace. Sometimes, too, Ellen would bring out a pitcher of sirup, and fry buckwheat cakes.

On the second day of the storm the old squire put up his old friend's barrels, as we called them. Theodora helped him select fine apples for Uncle Hannibal. They put in a few Northern Spys, some Rhode Island Greenings for mince pies, and half a bushel of large Roxbury Russets at the bottom, for these will keep till spring.

But presently I noticed that Theo-

dora grew silent and thoughtful. At last she said, "Grandfather, would you be willing to let me pack a barrel of our Baldwins to send to that Virginia family, near Chancellorsville, who took my father into their house after the battle and were so kind to him the day he died?"

This family was named Revell. They had cared for Uncle Robert as if he had been one of their own men. At that time they had no means of communicating with us; but after the war, Miss Cecilia Revell wrote to us, and sent Uncle Robert's watch, pocketbook and two ambrotypes of his wife and little daughter Theodora.

"Why, yes," the old squire said, after a moment, in answer to Theodora's question. "But do you suppose it would be well received from us? The Revells have suffered from the war, and may not feel kindly toward us."

"Oh, I am sure they would accept it. That was a kind letter that Miss Revell wrote us. Oh, I should so like to send them something, something of the very best we have!"

"You shall then! You shall!" the old squire exclaimed.

That afternoon we helped Theodora pack the barrel of Baldwins to go to Virginia. We put in also a few Northern Spys, Greenings, Sponge Russets, Roxbury Russets, Gilliflowers, Spitzenbergs, and last, but far from least, half a bushel of what we called "Orange-specks"—because, when ripe, they were yellowish in color, with numerous little brown specks under the skin.

We had four Orange-speck trees. The apples were broad and rather flat, with a strong stem, and from sixteen to twenty-four very plump brown seeds. They were mellow and good in December and January, and of all the thirty varieties in the old squire's orchard, we deemed those from the Orange-speck tree by the garden wall the best.

The girls carefully wrapped each Orange-speck in the light-blue tissue paper, put them in the middle of the barrel, and among them laid an envelope with a card on which Theodora had written:

*From the daughter and nephews
of the Union soldier whom you so
kindly cared for after the dreadful
battle of Chancellorsville.*

*These apples grew on the farm
of his parents in Maine.*

We faced and headed the barrel, and a day or two later we drew it to the railway-station, and sent it on its way.

As much as a month passed. Then, on the day before Thanksgiving, a letter came for Theodora, a really beau-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

New Hampshire Morning

There may be some who do not love
The cool and vibrant morning air,
The new-world sound of twittering
birds,

The heady wafts from amber fluid
That percolates contented song;
The snowwhite cloth, the yellow gold
Of butter pats, the amber toast,
The ivory white of rich, thick cream.
Some there may be who do not know
These joys which whet my senses keen
As day begins and keep them sharp
To make each moment of my day
A heaven of beauty when I pause
To let them gather loveliness.

—Caroline R. Wells,
West Andover, N. H.

tiful letter. It was from Miss Cecilia Revell. Theodora shed tears over it. She kept it for years, and it would still be treasured but for the fire in 1883, which destroyed the old farmhouse, and with it, a thousand such little keepsakes. Miss Revell wrote in part:

"What we did for your father was only what I am sure you would have done for any Confederate soldier in distress near your home.

"These are delicious apples, particularly those yellow ones with the little specks in them. In Albermarle County there is a fine apple, called the Albermarle Pippin, which is somewhat like them, but yours have the finer flavor. My brother, who deals in fruit at Richmond, is very desirous to know the name of these yellow apples, and if you grow many of them in Maine."

The letter concluded by saying that Miss Revell and her brother were sending us a return offering of something which grew in Virginia.

A few days later we were notified from the railway station that a barrel had arrived for us. Theodora and Addison hitched up Old Sol at once, and drove to get it.

It proved to be a barrel of the finest
(Continued on opposite page)

The Song of the Lazy Farmer

OF ALL the things that I dislike when I am drivin' down the pike, is winter fog, when it gits thick and heavy it sure makes me sick. It settles down, a fluffy wall, until you cannot see at all, you creep along and trust to luck that you won't hit a car or truck, or keep on going straight ahead when that there highway curves instead. The fog gits in your ears and nose, it chills you clear down to your toes, you're sick of this world and its strife and wish you'd led a better life. It makes a feller realize how much he trusts to his two eyes, we git so used to seein' that, until we can't see where we're at, we don't appreciate half right how great it is to have our sight.

We should have fog horns on our car, so folks can tell just where we are, and when they hear that fog horn blow they'll answer back to let us know that like as not someone will loom up right in front from out

the gloom. Mirandy says a better trick is stay at home when weather's thick, she says a feller ain't got sense to drive around and hit the fence and mebber land in some ravine that he has neither heard nor seen. At any rate, the foggy days when you can't see a little ways, are days that I don't like so well, and so I think I'll sit a spell and rest where it is warm and dry until the sun clears up the sky!

Too Much Territory

IN RESPONSE to my challenge in a recent issue for names of postmasters who had served longer than Mr. William F. Gelder, whose picture we printed, I have received a lot of interesting names and brief biographies of postmasters who have done splendid jobs in their territories for many years. One writer said that I had taken in too much territory by claiming a record for Mr. Gelder. I did.

Here are the names of men who have made records of long and splendid service in their local communities as postmasters:

Edward Pfeiffer, Middle Island, New York
39 years as Postmaster; 45 years as storekeeper. Succeeded by son.

George M. Paul, Sunapee Depot, P/P Wendell, N. H.

Is now in 33rd year as Postmaster; 45 years as Railroad Agent and Operator. Post Office is in Railroad Station.

Charles M. Spencer, Glenmont, New York
48 years as Postmaster.

Theodore G. Clark, Thompson Ridge, N.Y.
39 years of service.

David H. Buxton, Abbott, Maine
82 years old. Has operated general store since January, 1872. Has been

Postmaster since 1897—43 years. Town Clerk 34 years and Town Treasurer 12 years.

William Brookhouse Phillips, Crystal Run, New York
42 years last June.

Mother Polycarpa, St. Josephs, New York
41 years, first Nun designated.

T. S. Lennox, Glenford, New York
40 years. Appointed to Glenford, served 2½ years; appointed to Ashton; then name changed to Glenford 11 years later.

John J. Senior, Mill Plain, Conn.
43 years of service. 70 years of age. Ready to retire but no one wants his job. He succeeded his father in job, but three Postmasters intervened for short terms.

Walter S. Case, Canton Center, Conn.
80 years old. 47 years Postmaster. Storekeeper, too.

Joseph H. Baldwin, Durham, New York
48½ years. Also store.

Charles J. Craig, Quincy, N. H.
34 years Postmaster. His father was Assistant Postmaster and his son follows him.

George F. Hamilton, Burlingham, N. Y.
44 years of service. Storekeeper. Succeeded by son.

Arthur K. Cogswell, Etna, New York
Just retired this month, after 42 years as Postmaster.

(Continued from opposite page)
sweet potatoes we had ever seen. Down in the barrel was a box containing two kinds of queer yellow fruit, new to us young Northerners. Addison and the old squire guessed what they were—persimmons and papaws, yellow, soft, and just right for eating.

This pleasant exchange of Maine and Virginia products was continued for a number of years. In 1872 Theodora visited the Revells, and was royally entertained; and the year following Miss Revell and her sister Arabella spent a month with us, and a delightful visit it proved. It was from them that we learned how to make two of our now most-prized breakfast dishes, "old Virginia egg pone" and "spider cake."

In the Old Dominion they have plain cornmeal pones and egg pones. When made right and baked right, both are delicious. Of course, much depends on the skill of the maker, and not a little on the corn meal.

But a real yellow-tinted Indian spider cake, with the eggs nicely omeletted, seasoned, and cooked half-way between the upper and under crusts—well, there's nothing like it as a breakfast

The Seamless Robe

By Ethel A. M. Tozier.

They gambled for His seamless robe
With naught in mind but lust.
In the shadow of the cross of Christ,
They cast lots in the dust.

And he who won that spotless robe
Thought only of his gain,
And heeded not the words of Him
Who hung there in His pain.

But ever after when he wore
That robe so pure and white,
He felt his spirit burn within,
His darkness turned to light.

dish. Every girl in the United States ought to know how to make Indian spider cake. The young ladies from Virginia taught us the art.

Theodora's barrel of apples was indirectly the cause of a considerable demand from Richmond for our Baldwins. The people there, through Mr. Revell, learned that we shipped good fruit; and one year the squire sent a hundred barrels there.

Personal Problems

IT IS EASIER to discuss a personal problem with an absolute stranger than it is with a friend, unless that friend be unusually intimate. If you have a problem, write to Lucile, Personal Problems Editor, American Agriculturist, Box 367, Ithaca, N. Y. If you wish, your letter will be held entirely confidential, and Lucile will send you a personal reply by mail.

Split It Two Ways

Dear Lucile: I have been engaged for a year, and my friend and I are both working and saving to buy our furniture, have a nice wedding and a honeymoon trip. That is . . . he is saving his money for these things, and I am saving mine for a reserve to have when we start out in life together.

Now, we have decided to be married at once. If we do, I will have to help out with some of my money, if we have a honeymoon and a nice wedding dinner, like we planned. This doesn't seem just the right thing to me . . . what do you think?—Doubtful.

It's up to you to decide whether you had rather have a nice wedding and honeymoon by your putting up some of the money, or scrimp on your wedding and have more money in the bank afterward. As long as you have planned so cooperatively for everything, I shouldn't think the matter of your sharing expenses would bother, does it? It comes down to the question of having a smaller nest egg to start with. Personally, I believe I'd feel that a wedding comes once in a life-time and if I had a nest egg big enough to split two ways, I'd invest

part of it in a nice wedding and trip, and put the rest away for an emergency or the first baby.

Test Him by These

How can I tell if a boy really likes me? I have been having dates with a boy I'm crazy about, but I don't know whether he really likes me, or not. I'd like to know.—Uncertain.

We always have to take into consideration the differences in people; different people may show their regard in different ways. However, there are a few universal rules which I think apply.

If a man persistently seeks your exclusive company and seems genuinely disappointed when he cannot see you, I think that a pretty good sign he likes you. If he does nice things for you . . . puts himself out often for your pleasure, I think that's another good sign. If he acts happy and pleased with life in general when with you, that's another indication that he finds congeniality in your personality, and no lasting attachments can be formed without this quality.

If your young man measures up on these points, it's pretty sure that he likes you.

Don't Let Him Know

Dear Lucile: Please write a word of advice to wives placed in such a position as mine. I have just discovered evidence that my husband is interested in another woman. I found a letter in his coat pocket from her; it was not a "love letter" exactly, but showed them to be quite well acquainted.

Now—what I want to know is: should I tell him I know of the letter? Should I say nothing? I have not mentioned it so far, but the thought of it is like a snake twisting through my mind all the time. I cannot act natural toward him. On the other hand, I think talking about it may make things worse. What should I do?—Wronged.

All cases of this kind are different and must be handled so. It is almost impossible to give off-hand advice which will work out well in all cases, but as a rule, I think a woman is wisest who says nothing. In the first place, she thus preserves her pride. If her husband does not know she knows, she need not feel humbled in his eyes, as she would if it came to an open issue. In such a case, she would likely make a scene and demand what she had done to deserve such treatment. That puts her in an inferior position.

Secondly, if a wife pretends she knows nothing, she makes it much harder for her husband to pursue his affair. He must plot and plan and scheme so that

she will not suspect. If he knows she knows, he may think the need for secrecy is over, and become quite open and above board with his "friend".

Thirdly, there is the possibility that this is just a "passing fancy" on his part and means little or nothing. A husband may have his fancy captured by somebody else and make mild love to her for a spell—but left alone, the affair usually dies an early and comparatively innocent death. Played up by the wife and brought to a "show-down", it may prove more dangerous.

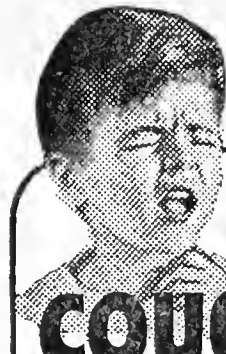

I am not condoning such a state of affairs for either husbands or wives or "other women"—but life being life, the state does exist. But—"time marches on"—and, in the main, husbands still remain with their wives, continue to support their children and maintain their homes. So one must just naturally conclude that the majority of these "cases" don't amount to much.

* * *

Don't Tell Her

Dear Lucile: A boy with whom I once went is going with a girl friend of mine. She has not lived in our neighborhood very long, and she does not know this boy's past history, which isn't very good. He is a nice looking boy and his father is a well-to-do-farmer, so he makes a good impression. What I can't decide is whether or not I should tell this girl about him.—Perplexed.

I don't think so. If the boy does not behave himself, she will find out for herself. There is always the chance that he has reformed and that this girl will learn really to care for him, in which case you would not want to be a "match-breaker". And, too, the bearer of bad tidings is always viewed with a bit of suspicion—it would be especially so since you once went with this boy. Your girl friend might think "sour grapes", you know.

NIGHT COUGHING CAN OFTEN BE PREVENTED

Your child's coughing at night—caused by throat "tickle" or irritation, mouth breathing, or a cold—can often be prevented by rubbing his throat and chest with plenty of Vicks VapoRub at bedtime. VapoRub's swift poultice-and-vapor action loosens phlegm, relieves irritation, clears air passages, tends to stop mouth breathing. This helps him relax into healing sleep.

THE STATE OF NEW YORK SAYS:
Look better. Feel better DRINK FRESH MILK

"Someone's always leaving them in Henry's cab."

By L. B. SKEFFINGTON

From SKEFF'S NOTEBOOK

PARADOXICALLY, there is plenty of water and an acute shortage in Western New York. The past two or three years of drought have resulted in a lowered water table in most sections. Even while there was two feet of snow on the ground recently many farmers have been drawing water. In some cases it was necessary to chop holes in the ice covering creeks. With two feet of frost in the ground the fear has been that a large amount of the melting snow and rainfall will run off rather than soak into the ground.

Senator Byrd Expected

United States Senator Harry F. Byrd of Virginia is expected to be one of the principal speakers at the annual meeting of the National Apple Institute at the Powers Hotel in Rochester April 17 and 18. At the same time the long-range planning committee of the apple industry and the extension service will meet, as will the executive committee of the New York and New England Apple Institute.

Truman Nold of Indianapolis, secretary of the national institute, says that all meetings will be open to growers

and others interested. Farm Bureaus are to be asked to notify their growers to this effect. Kirk Keller, Missouri grower, is president of the national body. John Lyman of Connecticut is to be toastmaster at the annual dinner.

The theme of the meeting will be "how to sell apples." The planning committee is expected to give consideration to production and marketing programs from a national viewpoint. Among those on the program will be Porter R. Taylor, in charge of surplus purchases, and Major C. E. Chase, secretary-manager of the Washington State Apple Commission.

Milk Agency Busy

Henry T. Blewer is the new executive secretary of the Rochester Cooperative Milk Producers' Bargaining Agency. Formerly he was an auditor in the offices of the administrators of the Buffalo and Rochester milk marketing orders. Thus Mr. Blewer has a background of work in milk marketing. Ted Richards of Perry, representing the Rochester Guernsey Breeders' Cooperative, is president of the agency; E. C. Strobeck, Dairymen's League, vice-president; Levi A. Higley, president of the independent producers is treasurer, and Oscar G. Smith, president of the Western New York Milk Producers' Federation, is secretary.

The uniform price to producers in the Rochester market for January milk was \$2.42, less two cents for the administrator's office, for each 100 lbs.

The first step Mr. Blewer is taking is to advise all producers in the area of the functions which have been undertaken by the administrator, representing the state, on the one hand, and the bargaining agency, representing the producers, on the other hand. He finds there still remains considerable misunderstanding and believes that all producers should know exactly what is being done and what can be done through organized effort of all producers in the area.

Market for All Producers

Under terms of the order, all producers supplying the market are entitled to share in the market. Actually, this means that any producer with milk to sell is assured an outlet at the uniform price. The administrator has arranged with the Dairymen's League and the Western New York groups to handle the milk of any producer who may not otherwise have a market. The restrictions are that any such producer must offer all or none of his milk; he may not turn up occasionally with an odd can or two. For this service a plant handling charge is made to the producer, and in both cases this charge is the same as charged members of the associations owning the plants.

An independent producer delivering milk to a plant chosen by the market administrator does not join the association owning the plant and retains his independent status.

The attitude of Bargaining Agency officials is that they would like to see all producers affiliated with some cooperative of their own choosing. They point out that the Rochester Independent Milk Producers' Association offers affiliation to producers who do not belong to any of the other coops, and that it was organized by independents to assure participation in the benefits

of the bargaining agency. There are about 1,800 producers in the market and probably about one-sixth do not belong to any of the coops.

The order was voted into effect by more than 85 per cent of producers, but agency officials are hopeful that they can build up nearer to 100 per cent cooperation among producers. This, they say, will benefit all producers by giving them greater bargaining power.

Blossom Festival Dates

This year for the first time there will be a Hudson Valley Apple Blossom Festival, the outgrowth of the Ulster County festival of the past two years. Henry Morgenthau, Jr., secretary of the treasury, is honorary chairman, and Albert F. Kurdt, manager of the Ulster County Farm Bureau is secretary. Climax of the festival will be the parade and coronation at Kingston May 11.

On Saturday May 18 the 10th annual Western New York Apple Blossom Festival will reach its climax with the coronation ceremonies at Batavia. This has become one of the most popular regional civic events upstate, with all farm interests represented.

Joint Group to Meet

First meeting of the Joint Fruit Committee of the State Horticultural Society and the State Farm Bureau Federation has been delayed because of conflicting dates. Present information is that the group will hold its initial meeting in Rochester either March 21 or 22.

This committee was set up by the two organizations to make a survey and study of the apple business upstate, along much the same lines as was done by a similar committee in 1929 and 1930. At the time the committee after long study and several public meetings recommended a program which was adopted by the Farm Bureaus in the various counties. It covered about everything from orchard practices to packages.

Dean Carl E. Ladd of the State College of Agriculture recommended two years ago that a similar committee be set up to "take stock" of the present situation and to make recommendations for the immediate and long-time future. Each of the two state organizations has named five members. Representatives of the college and state agricultural department will work with the committee.

Plan New Fair

The Rochester Exposition and Monroe County Fair having gone the way of some other fairs and finally suspended in 1938, the Monroe County Farm Bureau and the 4-H Clubs took the lead in calling a meeting to consider organizing a junior fair. It now appears likely that there will be a fair this year, largely in the hands of the juniors.

Farmers Do Cooperate

Frequently in the past, especially when we have been reading headlines about milk hearings and milk strikes, the public may have gotten the impression that farmers could not or would not pull together. In fact, I have heard the Governor and Commissioner of Agriculture deplore the lack of unity. Therefore, it was with much interest that I heard Governor Lehman recently say that the state farm organizations "had shown a broad and statesmanlike approach" to all major farm problems.

Here is the proof: Today milk marketing orders are in effect in the three largest markets in the state, with more than half of the state's dairy farmers cooperating. The milk problem is far from solved, but cooperation has shown what can be done. All major farm organizations are pulling together

through their conference board, which takes no action except by unanimous vote. I know of one or two things on which the farm groups disagree, but the surprising thing is that they agree on so many things.

Growers' Efforts Have Sold Apples

Speculation in apple circles has been to what extent the southern freeze might help the market. The International Apple Association reports that the loss of citrus fruit is benefitting the apple market. Southern vegetables are being replanted rapidly, but their harvest will be delayed, so that in this respect apples will have about a month of minimum competition from this source.

I have received a letter from a large grower who insists that the problem with apples is not marketing, but overproduction. I have no desire to argue the point, but it seems like a good time to point out that marketing effort has moved a record lot of apples so far this season. To the charge that the price is not high enough, I agree. But it seems to me that in a season like this the grower has three choices: 1—to leave his apples on the trees; 2—to let them rot in storage; 3—or to try to market them to best advantage.

Choice Number 3 resulted in 21 per cent more McIntosh apples being moved out of New York State in December than the five-year average. New England the decrease out of cold storage was 207,000 bushels, against 151,000 surplus crop movement two years ago. During January eastern New England moved 320,000 bushels, or 43 per cent of its Jan. 1 holdings, out of storage. The movement has continued good during the past two months, but lack of export markets has helped to hold the price down.

The price situation during the next two months may be helped moderately by dwindling citrus supplies. Again, it should be noted that all the favorable publicity apples have been receiving is beginning to make apples fashionable once more. The primary trouble in the market has been reduced purchasing power, so any industrial upturn will help.

Your Senators and Congressmen

HERE'S A LIST of United States Senators and representatives from your state. Save it. You may need to use it several times.

Right now, turn to Page 5, read the editorial on Farm Credit, then write the Senators from your State and as many of your Representatives as you possibly can.

In 1939, 1312 dairy herds in Herd Improvement Associations in New York State averaged to produce more than 300 lbs. of butterfat to the cow, and therefore won the designation of honor roll herds. The high herd for the year was owned by Carl Clarke of Allegany County, New York. His ten Holsteins averaged 14,756 lbs. of milk and 518 lbs. of butterfat.

Before Hay and Roughage
are **ALL USED UP**

★ Solve the short hay and roughage problem created by last summer's drought.

Substitute **TI-O-GA BIG BAG** for roughage. Big Bag is a very palatable, bulky, succulent feed containing 35% high-grade roughage ingredients—alfalfa meal and dried beet pulp. Just the feed needed to help hold milk production during the period of short roughage feeds.

Feed Big Bag along with the **Ti-o-ga Dairy Feed** (16%—20% or 24%) particularly suited to your needs. It's a feeding program that is "paying out" on hundreds of dairy farms.

See your **Tioga Dealer** today — Prompt action will enable you to take advantage of today's favorable milk prices. Illustrated Dairy Manual explains this profit-boosting program. Send for it today.

Milk Market News

(Continued from Page 12)

Noyes thinks that it would help the surplus problem if a statement could go to each producer with his monthly check which would show him just exactly how his milk was used in the previous month. "Such an undertaking," says Commissioner Noyes, "would be quite a job, and might not be practical because of the large amount of work involved."

In the New York market, milk is divided into nine classes, depending on the way in which the milk is finally used. The first four classes include:

Fluid milk
Fluid cream
Ice cream for New York City
Frozen cream

The last five classes are:

Canned condensed milk, including milk powder, and special cheeses.
Ice cream sold outside New York City.
Cream sold outside New York City.
Cream cheese, butter.
Cheese.

Commissioner Noyes points out that every pound of milk the dairyman produces which has to be sold in the last five classes brings down his average price, and is produced by him at a loss. For example, suppose a farmer produced 10,000 of milk last December. The first four classes of this had to be approved for New York City, but the last five classes could be unapproved and therefore met world-wide competition. For December the first four classes, that is the approved classes, brought a base blended price of \$2.52 per hundred at the 200 mile zone, while the unapproved classes, or the last five, brought a blended price of only \$1.26 per hundred. During December, about 20 per cent of each farmer's milk went into the unapproved classes. Says Commissioner Noyes:

"If farmers in general understood what happens in the use of their milk, they would not be so anxious to step up their production."

How much better it would be in every way if the individual farmer himself would do his share in keeping down his surplus and from ruining the good prices. One way to do this, of course, probably the best way, is to sell to the butcher those cows in your dairy that you know are not efficient producers. You would sell them if you thought of their milk in terms of that lower \$1.26 per hundred surplus price.

Potato Situation in Up-State New York

During the past two weeks the potato market in up-state New York cities has eased slightly because so many potatoes have found their way to market. Apparently growers stored last fall thinking the price would be higher at this time and now feel that they must move them out. Retailers also seem to think that potatoes are not moving to the consumer quite as fast as they did earlier in the season.

Pecks packed under the State Trade Mark are still selling at wholesale for around 30c to 32c and stock labeled U. S. 1 is selling at 25c to 27c. Some of this so-called U. S. 1 stock is not up to grade and is delivered without inspection. Such packers and shippers are taking a chance of running afoul of the misbranding law. It is also obviously unfair to the retail package idea to pack a quality less than that stated on the bag. Confidence of the consuming public is essential in peck packages because the consumer buys the potatoes without looking at them. Perhaps the few samples of poorly graded stock will tend to establish in her mind which are the right brands to buy.

Bulk potatoes are wholesaling in truck loads at around \$1.40 per cwt.

Much of this stock is not up to U. S. 1 standards although much of it is. Some truckers are paying 70 to 80c per bushel depending on quality and distance from market to farmers at the farm. In western New York where buyers do the grading with their own help and equipment growers are getting 50c to 60c per bushel depending on quality.

Although the southern freeze had little effect on the quantity of potatoes available to the public this spring it did retard the development of early southern potatoes so that old potatoes will have about three weeks longer shipping period than they would have otherwise. This will help the situation in the northeastern states where ample supplies of potatoes are stored. There is a difference of opinion as to whether or not there is more or less than last year, but private opinion seems to indicate more than government figures. The USDA estimate would indicate that 48,000 cars of old potatoes left in the country to move after March 1st, compared with 49,000 a year ago and 45,000 in 1938. With the estimated shipping season this quantity should not be burdensome—H. J. Evans.

Judgment Postponed

In the last issue we commented on the court order requiring Adler Creamery, Inc., to pay sums due into the producers' settlement fund. Adler Creamery was granted a stay of execution on the judgment on condition that the sums ordered in the judgment be paid to the Clerk of the U. S. District Court until the appeal was settled. In other words, if Adler loses the appeal, the money paid by Adler and held by the court will be paid over to Administrator Harmon. If Adler should win, the money will be returned to the company.

The One Hundredth New York State Fair

This year the New York State Fair, which will run for just a little over a week, from August 25 to September 2, will celebrate its 100th anniversary. To make this the greatest Fair of all time, and to make it possible for every farm family to attend, the Fair management has worked out an advance low-priced ticket sale. Under this plan, the regular 50 cent admission tickets will be sold for 25 cents during the period of the advance sale, which will probably be a month before the Fair opens on August 25. After the close of this month's sale period, and throughout the Fair, the regular 50 cent admission price will prevail.

Along the same line, it is also planned to distribute free tickets to school children, as the Fair has done in past years. Thus, a farm family consisting of two adults and any number of children, would be able to take advantage of the free tickets and the half-price tickets available during the advance sale, and go to the Fair for 50 cents.

The Fair management proposes to make the program of this 100th anniversary Fair so varied and so excellent that the value of that 50 cents spent for admission for the entire family cannot be duplicated for twice the money in any other way during the entire year.

Hidden Names

Again in this issue are names and addresses of several subscribers. These names and addresses stand alone, and are usually to be found in our advertising columns. If you find your name and address, write us a post card and we will send you \$1.00. The name must be your own and must stand alone and not included in any advertisement or article. To get the dollar, you must find it and write to us before March 23.

The object of this Hidden Name Game is to make a little fun and to encourage our subscribers to reap a profit from articles and advertisements in every issue.

Purina Mills Holds Herd Managers' Council

At Frederick, Maryland, recently herd managers from New Jersey, Pennsylvania, Maryland, and other nearby points spent an interesting two days at a meeting of the Herd Managers' Council under the sponsorship of PURINA MILLS, St. Louis, Mo. Most of the talks were followed by lively discussions. They covered such timely topics as: "Breeding for Better Milk Production," "Feeding," "Sanitation," "Abortion," and "Mastitis." Each man who spoke was a recognized authority in his field.

Good will is an intangible but very important factor in any business enterprise, and it is difficult to see how more good will for Purina Mills could be built in a shorter time than through such a meeting. No herd manager could sit through the sessions without taking home information worth many dollars to him.

BETTER PUMPS

There has been much interest recently in deep well pumps which have many of the advantages formerly available only in shallow well pumps. Now the DECATUR PUMP COMPANY of Decatur, Ill., have announced the Burks Educator Water System for deep wells. Development of this system was first started in 1932, and in 1932 a dozen of the pumps were put out where farmers used them under normal conditions. In only one case was there any trouble, and this was traced down and corrected.

If you are interested, either as a farmer or as a dealer, write to B. J. Duer, Decatur Pump Company, Decatur, Ill., for full information.

* * *

BETTER PLOWING

As far apart as the two poles are the modern tractor-powered plow and the crooked stick with which natives in some countries still attempt to prepare soil for planting. Under the title "Plowing Takes Wings" J. I. CASE COMPANY of Racine, Wisconsin, have compiled pictures and pointers on faster and cleaner plowing. A post card will bring you a copy.

* * *

COW TROUBLES

"Home Help for Dairy Cows" is the title of a 32-page booklet on cow troubles. It is written by a veterinarian, and a post card request to the DAIRY ASSOCIATION COMPANY, INC., Department 12, Lyndonville, Vermont, will bring you a copy.

* * *

A BUMPER STRAWBERRY CROP

The strawberry catalog of J. H. SHIVERS PLANT FARM, Box A20, Allen, Maryland, contains careful, authentic information on soil preparation, when to plant, and how to set strawberries. Follow the directions carefully and improve your chances for a bumper crop.

* * *

RESEARCH IN SPRAY MATERIALS

Most of the new products which industry has made available to agriculture are a result of costly, painstaking research. This is particularly true in the field of pest control, where an unusual amount of new materials have been made available in recent years. It by no means follows that the job is complete, and no one knows this better than manufacturers of spray materials.

THE GRASSELLI PEST CONTROL

This sprayer is just the thing for the home gardener. It holds four gallons, has an improved pump that increases pressure, and in the hands of a careful operator it will result in a thorough job.

RESEARCH SECTION of E. I. Du Pont De Nemours Company has announced a new laboratory for research on insecticides and fungicides to be erected at the company's experiment station at Wilmington, Delaware.

* * *

PLENTY OF CHILEAN NITRATE

Consumption of Chilean Nitrate in the United States, largely for fertilizer, is expected to show a substantial increase over last year according to the CHILEAN NITRATE CORPORATION, 120 Broadway, New York City. In the last World War this product was largely used for explosives, but as soon as the present war began, the Chilean Nitrate Corporation announced that there would be no increase in price during the current season and no lack of supply.

* * *

PESKY FLIES

If every fly lived, the offspring of one pair of flies would in a year swamp any farm. Fortunately, they don't all live, but plenty of them do. THE DETJEN CORPORATION, 303 West 42nd St., New York City, have put a lot of study on the problem of fly control. This company has men who are glad to make definite recommendations to you to help solve your fly control problems.

* * *

MORE BUSHELS PER ACRE

One of the big elements in the cost per bushel of any grain is the yield per acre. This gives a particular significance to the subject "Better Grain Yields from the Same Fields." This is the title of a booklet published by JOHN DEERE, Moline, Illinois. It is chuck full of information you will find helpful and valuable.

* * *

SOME TURKEY!

Recently at Grand Forks, North Dakota, was held the All-American Turkey Show. For the Grand Champion dressed turkey, DR. SALISBURY'S LABORATORIES, Charles City, Iowa, paid a record price of \$3.30 a pound, a total of \$60.05, to the growers, Mr. and Mrs. George Hamilton of Challis, Idaho.

The International Harvester Company exhibit at the recent meeting and show of the New York State Horticultural Society at Rochester.

Kernels, Screenings and Chaff

By H. E. BABCOCK.

I AM WRITING this at the headquarters of the old Chisolm Ranch about four miles south of Roswell, New Mexico.

Every cattleman in the Southwest knows the Chisolm Ranch. It was here, before the railroads were built, that the herds were assembled for the annual drive to Kansas City over the famous Chisolm trail.

It was here, too, that the notorious outlaw, Billy the Kid, made his headquarters. He was a cowhand working for old man Chisolm.

All Quiet Now

Once the scene of intense activity, shootings and high jinks, the Chisolm Ranch headquarters is now a peaceful irrigated farm quite undistinguished except for the miracle of the underground water which makes its naturally barren acres spill over with enormous crops of cotton, alfalfa, and maize.

Irrigated Farming

With a cheap camera I have tried in an unskilled way to get a few pictures which will tell the story of irrigated farming here in the Pecos Valley. They are printed on this page with my apologies.

Both the economics and the practice of irrigated farming have interested me tremendously. I don't know enough yet to draw any sure conclusions.

It is a grand experience, however, to be around when farmers are putting in crops in great level hundred-acre fields which they are absolutely sure will come through with a big yield. Oats, I am told, go seventy-five to one hundred bushels per acre; wheat land maize, one hundred to one hundred and twenty-five bushels; cotton, one to two-and-one-half bales per acre; and alfalfa, six to ten tons per acre.

Then added to the certainty of a crop is the certainty of the weather. What a pleasure it must be to put up alfalfa hay, for example, absolutely sure that the sun will shine each day.

To Follow Up

Since I have been down here I have okayed an arrangement which will bring my son, H. E. Babcock, Jr., down here for six months on a leave of absence from our Sunnysables operation.

Having been down here myself and seen the fields prepared for approximately 250 acres of cotton, 200 acres of alfalfa, 100 acres of oats, and 150 acres of wheat land maize I shall follow both the growing of these crops and the marketing of them with keen personal interest.

As Howard will be reporting to me frequently I may occasionally print summaries of his reports so that the readers of Kernels, Screenings and Chaff may share with me the experience of seeing a farm run under as radically different conditions from those

which prevail in the Northeast as can well be imagined.

Political Observations

Down Mexico way, where I am writing these notes, there are no Republicans, only New Dealers, mostly on public payrolls, and conservative Democrats. Garner is strong here but no one takes his candidacy seriously.

I landed in El Paso, Texas, just after candidate Frank Gannett had left. Mr. Gannett made a very favorable impression, as is indicated by an editorial in an El Paso paper which lamented that he wasn't a Democrat.

Candidate Dewey is advertised as coming to New Mexico soon. People seem to want to see him, just as they do J. Edgar Hoover and Billy the Kid's ghost.

The plain truth of the matter is that no Republican is taken seriously down this way and that if Mr. Roosevelt runs again he will win in a walk, in this section of the country.

Note: These observations will probably make some readers of Kernels, Screenings and Chaff sore, but bear in mind that I am only reporting what I judge to be the facts.

Lamb Feeding

Last week I was in a town which shipped thirty-eight carloads of fed lambs to Kansas City in one day. In fact, the farm in which I am interest-

ed had three carloads in the lot.

These lambs weighed in Kansas City from 88 to 108 pounds. They brought from \$9.25 to \$9.60 per hundredweight. The top price was brought by lambs weighing 104 pounds each. They looked a little too heavy to me.

Lamb feeding in New Mexico reminds me of poultry feeding in the Northeast. Each feeder has his own ideas of how it should be done. One man flatly contradicts another and yet both may be successful.

My own conclusion is that most of the feeders have such good alfalfa hay that they can't help succeeding, no matter what they do.

Geese for Quack

I have seen a flock of three hundred geese which are immune from being eaten, picked for their feathers, or sold to market.

Its members are respected farmhands; as such they rate the usual privileges, for this flock of geese performs a most important economic function.

Its job is to weed cotton, especially to rid the cotton field of the dread Johnson Grass (a sort of giant quackgrass). After the cotton is planted and nicely up, the flock of geese, starved until its members are very hungry, is turned into the field. To keep alive, the geese not only eat the shoots of the Johnson Grass but they follow the

American Agriculturist, March 16, 1940

roots back and eat them, too. They will not touch a cotton plant no matter how hungry they are.

Didn't someone once tell me that our Northeast quack-grass is so named because ducks are so fond of it? Page Donald Duck!

Ever-Normal Haymow

Since I have been away from home, Hank, so I am advised, has sold our ever-normal haymow. The report is that it baled out fifty-five tons. This surprises me. I would have considered selling it for forty tons and know I would have lumped it off gladly at forty-five.

Because the time to drive home a point is when the proof is available, I want to stress the soundness of carrying over in the Northeast reserve stocks of hay, whenever a favorable season makes them available.

Directly through the difference in price obtained and indirectly through having been in a position to keep my stock and even add to it, I figure our ever-normal haymow at Sunnysables has netted us at least seven hundred and fifty dollars in two years.

While we have sold it out now, we shall proceed to build it up again; meanwhile for protection we will depend on silage we are carrying over. Six- to eight-dollar hay in the Northeast should never be sold but stored against future shortages.

(Right): Cutting a ditch in a hundred acre oat field. The oats are already sown but won't come up until the field is watered. This ditch, when completed, will connect at one end with a permanent ditch for its supply of water. The other end will be blind. When filled from the permanent ditch, fed by the well, the level of the water in this ditch will be above the level of the field.

(Left): A permanent irrigation ditch leading away from the well. Note the end of the concrete basin into which the well discharges in the foreground of the picture. Water is transported long distances in ditches like this one.

Thirty-two hundred gallons of water a minute flow from this artesian well (right) on the farm Cornell University owns near Roswell, in the Pecos Valley, New Mexico. This particular well is permitted, by regulations which protect the underground water supply of the valley, to pump three acre-feet of water each season for about three hundred acres. There is another well on the place which waters about four hundred acres.

A Mexican farmhand (left) watering a field from a ditch like the one the men are building (top) with the four-horse team. In the foreground you can see the metal cut-off he uses to dead-end the ditch as he works up it. Water is released from the ditch by cutting a hole in the side with a round pointed shovel. It takes very careful preparation to put a field in shape so that every square foot of it can be watered, and to handle the water so that there is no washing or erosion of the land.

Protective SERVICE BUREAU

MEMBER
AMERICAN
AGRICULTURIST
PROTECTIVE SERVICE

Conducted by H. L. COSLINE

A Sales Stimulant

"Some time ago I entered into a contract with a concern whereby I was to issue trade cards to our customers who, after they received fifty, could send them in to the company and receive a small camera and three rolls of film. I paid \$22.50 to cover the printing of the cards and was to receive a refund of \$25.00 when the customers had sent in for twenty-five cameras. The contract was to expire last January 1. Later I found out that the customers had to send in 30c in cash to cover the cost of films and couldn't get the camera unless they did that.

"To fulfill my part of the contract, I personally collected cards from ten of my customers to make the twenty-five, and sent money and postage in each case with my customer's name and return address. When I asked for my refund, they said I had sent in the cards instead of my customers. I can find no mention in my contract that I could not send money for my customers. In fact, the agent who sold me the idea stated that I could do so."

We referred this to the company in question and received the following reply:

"If you will read our contract, you will find same clearly reads, 'Cards are redeemed from customers only through the regular course of trade.' Our representatives are cautioned against making any misstatements. They are authorized to tell our customers that they may forward cards to us if it is an impossibility for their customer to do so. Our contract is clearly and simply written and is carried out to the letter."

Obviously a store owner should not return these cards without actually handing them out to customers who have made purchases. Our subscriber states that he did this, and it is a bit difficult to see what difference it makes whether his customers actually dropped them in the mail or whether our subscriber collected them and sent them in as he states he did.

They Write the Contract

"If it is within the province of your Service Bureau, and it is one of the privileges afforded a subscriber to *American Agriculturist*, will you kindly advise relative to the character and standing of the Company?"

The name of the concern mentioned might be any one of a dozen collection agencies about which subscribers have inquired recently. Agents representing these collection agencies make glowing promises that bad debts will be collected. Unfortunately, the experiences of many subscribers have been very unsatisfactory.

The usual contract put out by such companies calls first for a high per cent for collecting, and second, charges a listing fee for each and every account

given them. The common result is that the listing fee eats up the money due the man who turns in his accounts and he gets little or nothing.

If slow accounts cannot be collected by persistence, and as a last resort legal action through a local attorney, there is little chance that a collection agency of doubtful reputation located in a distant city can do any better.

Most of these collection agencies operate within the law but put out a contract so favorable to themselves that no man who understands it thoroughly would sign it.

No Charge

"What hidden charm do you possess that you can get answers to your letters when others can't? I complained to the company many times with no response, but since you got after them, they sent two representatives who said they would take back the merchandise I bought and refund the money. I don't know how to thank you for your help. It seems as if you should charge something for your services."

There is never any charge for any help the Service Bureau can give. All reliable business concerns value the good opinion of the *American Agriculturist*, and many of them go considerably more than half way in settling a difference of opinion.

Egg Checks are Slow

In the last week or two we have received a number of letters from subscribers who have not yet received pay for eggs shipped to the Kay Egg Company, 2167 First Ave., New York City. Our letters to the Kay Egg Company have been returned, marked "Moved—No Forwarding Address."

Addresses Wanted

"I would appreciate it if you could help me locate my lost sister Mrs. Mary Pierce Kosuga, who was living in Cleveland, Ohio when I last heard from her. My sister was born in New Hampton, New York, in 1898, married William Kosuga and made her home in Cleveland. She has two sons."—Mrs. Frances Zuk, New Hampton, N. Y.

A small check sent to Ray Wormley, Route 2, Homer, N. Y., was returned marked "Moved; left no forwarding address." If Mr. Wormley will give us his address, we will be glad to send it to him.

Not Guaranteed to Live

I bought some ten-weeks-old started chicks and they all died. I think the hatchery should make good.

The common practice is for sellers of livestock to guarantee live delivery, but once delivery is made, no one can guarantee that the stock will live. In cases like this, the only possible way to force adjustment is to submit proof that the stock was diseased when delivered and that the seller knew it. Of course, the seller can make an adjustment through a desire to maintain the good will of the purchaser. We will give him that opportunity.

An appeal is made to all graduate nurses of the Blossburg State Hospital, Blossburg, Tioga County, Pennsylvania, of the classes of 1904, 1907, and 1910, under Dr. William Crandall, Sup't., to give evidence that you are a graduate. The purpose of this is to aid one of the number to secure a duplicate diploma to replace one destroyed by fire. Write John J. Mulligan, Sherburne, N. Y.

M. S., a farmer in Allegany County, wants a hired man. He prefers a middle-aged, single man who would appreciate a good permanent home. Wages will be small. Write M. S., *American Agriculturist*, Box 367, Ithaca, New York.

In this wrecked car, M. Sherrid Jones of Sussex County, New Jersey, lost his life. Apparently a front tire blew out causing the car to crash and overturn. It burned up with Mr. Jones pinned underneath.

HIS FATHER WRITES

I received your draft for \$1,000.00 drawn to me as administrator of the estate of Martin Sherrid Jones, whose death resulted from an automobile accident.

My son carried one of your limited travel accident insurance policies.

I appreciate this check and I wish to thank you for your prompt adjustment of this claim. It was settled just nine days from the date the claim was presented.

Martin W. Jones.

25.00 FRAUD REWARD — American Agriculturist will pay \$25.00 for evidence leading to the arrest, conviction and imprisonment for at least 30 days of any person or persons who defraud or attempt to defraud on the premises an AMERICAN AGRICULTURIST subscriber who has Protective Service Bureau Sign posted on his premises at the time such fraud is committed. Claim for the reward must be made promptly, not later than the date of conviction. Reward does NOT apply to conviction for theft.

American Agriculturist guarantees fair treatment of subscribers by advertisers. We refuse many ads known to be unreliable but if a fraud slips in, you are protected. To take advantage of guarantee, subscribers must say, "I saw your ad in American Agriculturist", when writing to advertisers, and then report unfair treatment promptly to Service Bureau.

Membership in the Protective Service Bureau is confined to our Subscribers. Free service rendered members consists of the adjustment of claims, collections of obligations owed by supposedly reliable business concerns (does not include obligations between individuals or any claim that is more than 6 months old); and any inquiries a subscriber may make concerning the problems of farming or home making. Address all letters to Service Bureau, American Agriculturist, Savings Bank Bldg., Ithaca, N. Y.

THE G.L.F. PAGE

The basis of a sound business cooperative is voluntary use by fully informed patrons

TO DAIRYMEN IN DROUTH AREAS:

Many farmers, with their hay almost gone, face the double problem of (1) getting cows on pasture as early as possible, and (2) making more hay for next winter. The following suggestions may be helpful:

MORE PASTURE

1. Start Pastures Early. Pick the best part of the pasture and (unless it is a wild white clover piece) put on 60 pounds of elemental nitrogen to the acre as soon as you can get onto the land. This amount of nitrogen is furnished by 300 pounds of Sulphate of Ammonia, 400 pounds of Nitrate of Soda, or 150 pounds of Uramon. The nitrogen will bring on the pasture a week to 10 days earlier. You can figure on feeding about 6 cows per acre.

2. Pasture Fall Wheat or Rye. This practice is recommended only in the most urgent emergency. It will provide early pasture while grass is coming on. If the stock does not remain too long, the grain yield will only be cut 10% to 15%.

3. Sow Supplementary Grass. This may be necessary where pastures have been wiped out. White Blossom Sweet Clover may be used where the land is adapted to it. In other places, Sudan Grass will make a good summer pasture. Sowed just after corn-planting time, it can be pastured when 12 to 15 inches high after 7 weeks. It should be grazed enough so that it does not set seed.

MORE HAY

1. Use Manure. Thin seedings and fall seedings, and established meadows

which show more than 50% grass, should be manured while the ground is still frozen enough to get on it. If necessary, use some of the manure you planned for the corn land and put a mixed fertilizer on the corn.

2. Use Nitrogen Fertilizer. Before resorting to emergency hay crops, it will usually pay to put a nitrogen fertilizer on old meadows which have more than 50% timothy or other grasses. A meadow worth fertilizing is one that will ordinarily cut a ton or more of hay. The equivalent of 100 to 300 pounds of Sulphate of Ammonia is recommended in New York. In New Jersey, 300 pounds is advised. If Cyanamid is used, it should be put on early. If difficulty is experienced in getting good coverage, mix some superphosphate with the nitrogen material.

3. Sow Emergency Crops. Several emergency hays can be used. Hay oats, for one, will reach the milk stage 75 to 80 days from early planting. They cure easier than many emergency crops. Seedings can be established in hay oats.

Sudan Grass is an excellent hay crop—can be sowed close to corn-planting time and cut for the first time as soon as the heads appear, and again 5 to 6 weeks later.

Other emergency hays include Soybeans with Sudan Grass, Soybeans, Jap Millet on late, wet soils, and the Foxtail Millets (which, of course, should not be fed to horses.)

Your Service Agency has information on drouth problems and the costs of tackling them. A folder, "X Marks the Spot to Fight Drouth Damage," will be sent at your request, from G.L.F. Exchange, Inc., Ithaca, N. Y.

FEEDING FACTS

Protein Increased in Fitting Ration

A slight change in the formula for G.L.F. Fitting Ration (adding 100 pounds wheat bran replacing 100 pounds hominy feed and corn meal) effective March 11 permits an increase in the protein guarantee from 13% to 14%.

This increase in protein is particularly desirable for growing young stock where the roughage is timothy or other non-legume hay. This amount of protein is needed by younger calves after they are taken off Calf Starter at sixteen weeks.

Because it is intended for young stock and dry cows, Fitting Ration carries a 3% fat guarantee, instead of the 4% recommended for cows in milk. The new formula:

FITTING RATION

1444 lbs. Total Digestible Nutrients

200 lbs. 34% Protein O.P. Linseed Meal
540 lbs. Wheat Bran
600 lbs. Hominy Feed & Corn Meal
400 lbs. Ground Oats
220 lbs. Cane Molasses
15 lbs. Dicalcium Phosphate
5 lbs. Ground Limestone
20 lbs. Salt

2000 lbs. FITTING RATION

Protein.....	minimum	14.00%
Fat.....	minimum	3.00%
Fiber.....	maximum	8.50%
Digestible Protein — 10.80%		

How Much Milk Should a Mash Contain?

All poultrymen know that milk is a valuable feed for chickens. The chief reason for its value is that it provides Vitamin G (riboflavin), which poultry of all ages need. The best known milk products used in poultry mashes are dried skimmed milk and dried whey.

Poultrymen who like to feed milk also like to know how much they are feeding. A glance at the open formula tag on a bag of G.L.F. mash will show just how much milk it contains and in what form. Super Laying & Breeding Mash, for instance, contains 40 pounds of dried skimmed milk and 100 pounds of dried whey.

All G.L.F. mashes except two include milk in some form. The two are Laying Mash, which gets its Vitamin G from alfalfa meal, and Special Laying Mash, which uses alfalfa meal and dried brewers' yeast.

Dried brewers' yeast is also used in Starting & Growing Mash, along with dried whey. Since some poultrymen prefer to feed more milk products, the 1939 formula is also available, with dried skimmed milk in place of the yeast.

THE FARM PAPER OF THE NORTHEAST

UP-TO-DATE SPRAYING *for Apple Diseases*

*Spraying apple trees in a hurry on the
farm of Jay Gelder of Chazy, New York.*

*by O. C. Boyd **

schedule. Apple scab is, after all, by far the most hazardous disease of apples in the Northeast. Even the cedar rusts, except under extreme conditions, are fairly well controlled by a scab-tight spray program.

The High-Power Spray Rig

While there appears to be a tendency toward the increased use of spray rigs with 25 to 35 horsepower motors and 40 to 50 gallon-per minute pump capacities, yet the up-to-the-minute improvements in spray rigs generally are represented equally well in the smaller outfits. Nevertheless, there are certain definite advantages in spraying for apple scab with the larger capacity outfits, particularly early in the season when *timing* of the spray may be very important.

With the larger outfits, and even with moderately large trees, it is possible to keep the spray rig moving continuously and obtain a satisfactory coverage of the trees with two multiple nozzle guns or spray brooms operated from the sprayer. Such spraying not only is economical from the standpoint of conserving time and labor, but it usually insures time-

● Professor Boyd is Extension Plant Pathologist at the Massachusetts State College of Agriculture at Amherst.

ly spraying where, for example, an orchard needs to be protected within a limited period of time.

However, according to experience with these large capacity spray outfits in Massachusetts, it requires highly trained operators of the tractor and the spray guns in order to do a thorough job of spraying against apple scab. Too often the rig is hauled along so rapidly that adequate coverage of the trees is impossible. With large trees, one man needs to operate from a tower rather than from the top of the tank in order to reach the tops of the tall trees, and the second man may need to work from a low, rear platform, or even do some walking part of the time, in covering the lower half of the trees.

If the use of such large outfits does **not** permit as effective control of scab as is customary with smaller spray rigs, where more time is spent at each tree and where one of the operators must walk around and perhaps under the tree in order to cover the lower branches, then it is a mistake to use them. In Massachusetts, larger sprayers are being used effectively by some growers, and with unsatisfactory results by others.

The entomologists here are inclined to attribute the noticeable increase, in recent years, of certain minor insect pests such as red-banded leaf roller, bud moth, and leaf hopper, to the failure to cover the under sides of the leaves by those who spray exclusively from the spray tank. So, the advantages of time saving and timely spraying may be offset by unsatisfactory control of pests unless extreme care is observed in operat- (Turn to Page 6)

JUST WHAT is the apple grower of today confronted with in maintaining an up-to-date spray program? What are the recent developments in spraying equipment, spray materials, and information on pest control that challenge the apple grower? First, sprayers are bigger and better than ever, and equipped to cover a larger area of the orchard in a given time and with less man power than was possible a few years ago. Second, among the numerous kinds and brands of spray materials on the market, certain ones are best for certain pests in the different orchard sections of the country. Third, as time goes on, there is an increasing amount of information coming from the experiment stations, the research departments of the manufacturing concerns of spray machinery and materials, and from growers themselves, regarding the best procedures in pest control for the different fruit sections. It is extremely important that the apple grower keep informed of these developments if he expects to maintain an up-to-date spray program.

I plan to discuss spraying primarily from the standpoint of disease control. Furthermore, little will be said here regarding spray materials and methods in combating such diseases as apple blotch, bitter rot, and Brook's fruit spot, because those diseases are not important in Massachusetts. Blotch is rarely present at all, and Brook's spot is handled adequately by the sulfur spray program required for the scab-susceptible varieties. In most seasons, bitter rot, as well as black rot, is controlled satisfactorily by pruning out cankers, followed by the scab control spray

FOR GOLDEN WEDDING CONTEST WINNERS, SEE PAGES 22 - 23.

CHARLES M. GARDNER

Editor of the National Grange Monthly and High Priest of Demeter of the National Grange.

A STRIKING EXAMPLE of the spread of the Grange in new fields is furnished in the state of Wyoming, where active organization work was started somewhat less than two years ago. The response has been quite remarkable considering sparsely settled

farm conditions in that great state. At the present time nearly 30 active subordinates are functioning, several Pomona organizations have been perfected, some of the local units are meeting in owned halls, and such features of Grange work as conferring degrees, community service activities and educational efforts are being vigorously pushed throughout the state. There are more than sufficient subordinates in Wyoming now to organize a State Grange, and this is likely to be brought about in the near future. Meanwhile, organization efforts are being started in Kentucky and an increasing call urges the formation of Granges in Florida.

THE executive committee of the New York State Grange has decided on

Kingston as the location for the 1940 session of the state organization, whose dates are December 10-13. This brings the annual session to the extreme eastern section of the Empire State and will result in a large attendance and a big sixth degree class, although in anticipation of the National Grange session at Syracuse, November 13-21, a series of special meetings for the purpose of conferring the sixth degree will be held covering thoroughly the entire state.

CONNECTICUT Granges are passing through an "epidemic period," due to a remarkable number of weddings that have taken place in the past few weeks, where the contracting parties were officers of local Granges. The latter have frequently been assistant

steward and lady assistant steward, who after marching together on the floor of the Grange hall have decided to continue the march through life. Some of these wedding ceremonies have been solemnized in the Grange hall, attracting wide attention, and as the result of the "epidemic" it is reported that the applications of young people for Grange membership in Connecticut exceed any previous year!

AMONG the Granges in Maine which are making provisions for a meeting-place for their Juvenile branch is Livermore Grange in Androscoggin County, and the youngsters are correspondingly happy over their good fortune. In the old days Maine Grange halls invariably had a commodious stable for the comfortable housing of horses on wintry nights, and the latter having in many instances gone out of use, the building is frequently remodeled into a meeting-place for the Juveniles.

DUTCHESS COUNTY Pomona in New York is planning for a big meeting, afternoon and evening, at Washington Grange hall in Millbrook, on Wednesday, June 5. In the afternoon the fifth degree will be put on in full form, with an attractive evening program. The degree team is under the direction of Deputy Ethan A. Coon of Rhinebeck and has a far-flung reputation for presenting the degree in remarkably impressive fashion, with many accessories which add to its beauty.

THE Pennsylvania Educational Aid Fund, operated by the Grange to aid worthy young members in securing a better education than would otherwise be possible, owes much of its financial strength to the elaborate cook book put out some time ago by the Home Economics Department of the State Grange, and which has been widely sold, netting all together nearly \$15,000 profit. Home-made recipes were contributed by Pennsylvania Grange ladies, the book was issued in very attractive fashion and found a ready sale. In addition to the portion of the proceeds contributed to the Educational Aid Fund, a considerable amount was paid over to the fund which built the State Grange dormitory for girls at the State University, costing more than \$100,000—the first girls' dormitory that institution ever had.

STATE-WIDE Grange interest in Rhode Island has been created by an apple pie contest, whose finals have just been held in connection with the Rhode Island Fruit Growers' Association meeting at Providence. There were 20 contestants and the three winners were as follows: Mrs. Fred R. Pember of West Kingston Grange, first; Mrs. George H. Blackwell, Jr., Ceres of Rumford Grange, second; Edna E. Taylor, Flora of Central Grange, third.

BLOW-ME-DOWN Grange at Plainfield, New Hampshire, is the latest subordinate in the Granite State to celebrate the occupancy of a new hall. An abandoned church in the village furnished the opportunity for a profitable purchase, volunteer labor by members was liberally contributed, and the result is a thoroughly up-to-date Grange meeting-place with modern heating, lighting and kitchen equipment, and ample facilities for handling a large crowd.

PORTLAND Grange, No. 2, Chautauqua County, New York, presents an entry for the "old-timers' group" in the person of William H. Howe, who has just been awarded his Golden Sheaf certificate for 50 years continuous membership. During the entire

STYLE LEADERSHIP—Rich, roomy interiors!

Avoid

UNADAPTED HYBRID SEED CORN

SEED corn of double-crossed varieties developed for the Corn Belt is being offered to New York State growers of silage corn. All of the evidence indicates that it is good for the corn belt but it is not adapted to conditions in New York State and most of New England. Careful field tests over a period of years may show that for certain favorable areas there may be a Corn Belt hybrid that will be adaptable. Such tests are properly the work of an experiment station or a college where conditions are controlled and where results are checked carefully. If a dairyman with an experimental turn of mind desires to try one of these hybrids himself, it would certainly seem wise to do so on a small scale and not gamble with his entire crop.

Salesmen are using yield test figures from the State of Ohio to prove the excellence of this corn. The figures are correct but they may be misleading. Ohio has a longer growing season than we have, and other conditions there are more favorable for the growth of corn. Naturally, Ohio tests do not show 29-3 double-crossed corn at the top. 29-3 is no more suited to Ohio conditions than Corn Belt hybrids are suited for New York.

The variety 29-3 has been developed as a silage corn for New York conditions, and is also adapted to much of northern New England. It will develop to a satisfactory state for silage with the climate and growing season which we have. In fact, in western and central New York, 29-3 is also used for grain, although it is generally admitted that we need for New York a better corn for grain than we now have.

The New York State dairyman who wants the best possible yield of silage corn should consider growing or at least trying out 29-3. (The lower Hudson Valley is an exception.) If he cannot get it, and of course there is not enough seed of 29-3 to plant more than a small percentage of our silage corn acreage, he should plant one of the open-pollinated varieties which experience has shown will give good yields in the area where he lives. Because double-crossed corn has been so much publicized and advocated, do not conclude that if 29-3 is not available, the next best corn is a hybrid from a Corn Belt state.

You will be doing farmers a favor and incidentally your local seed dealer as well, if you will explain this situation to him and urge him to avoid buying crossed seed corn from the Corn Belt.

The development of a hybrid corn suited to any area is an exceedingly complicated process. The plant breeder starts off with four varieties (to produce 29-3 these are: Luce's Favorite, Bloody Butcher, Cornell 11 and Onondaga White Dent). The first year two of these varieties are grown in one field—the other two in another field at some distance. In each case, all of the tassels from one variety are removed, and as a result the corn growing on the detasseled stalks is pollinated by the other variety, thus giving a single-crossed hybrid corn. The next year the two resulting varieties—that is, the corn growing on the detasseled stalks of the two varieties—are planted in one field. Again tassels from one of the single-crossed varieties are removed, with the result that the ears growing on the detasseled stalks are known as double-crossed corn.

This is the seed which is planted, and it must be produced every year by the complicated process described. The

ears which you grow when you plant 29-3 double-crossed corn cannot be used for seed. They will not breed true, and the results will be exceedingly disappointing.

Naturally, because of the complicated process which must be followed, double-crossed seed corn costs more than seed of ordinary open-pollinated varieties; but repeated tests have shown that the increase in yield makes the extra cost a good investment. Farmers who, through misunderstanding, are persuaded to buy double-cross-

SMALL FRUITS for Home Use *by* G. L. SLATE

OCCUPYING relatively little space and not requiring an elaborate spray program, the small fruits provide an abundance of high quality fresh fruit for the table throughout the summer months. For canning, jam, jellies and fruit juices, they are very useful.

G. L. Slate

An open airy situation along the side of the garden area and well away from the shade and competition of large trees suits them best. Currants and gooseberries do very well in light shade and are useful to occupy areas on the north side of fences and buildings where other fruits do not thrive. If space is at a premium, they may

be tucked under the plum and peach trees where competition is not too keen. Where close planting is practiced, additional fertility must be provided.

For the home fruit garden where maximum production from a limited area is desired, a fertile soil in good tilth is essential. A medium loam, well-drained and well supplied with organic matter is best. A soil that will grow good corn, potatoes, and other vegetables will do very well for the bush fruits. If deficient in organic matter through long-continued cultivation without turning under green manure or the addition of stable

manure, this deficiency must be remedied. Stable manure at the rate of 20 tons to the acre is by far the best source of organic matter for the home garden. Lacking manure, some crop such as clover, soybeans or rye may be grown and turned under to improve the physical condition of the soil.

Perennial weeds such as quack grass or bindweed are difficult to clean out of berry plantings, and should be eliminated before the berries are set. Old run-out raspberry plants should also be destroyed as they are nearly always infected with mosaic, which will spread to the new planting. The black and purple raspberries should not be set in soil in which tomatoes, potatoes, peppers and eggplants have been grown during the previous three years. These plants may infect the soil with a fungus that is destructive to the raspberries.

Preparation of the soil should be thorough. Deep plowing followed by thorough harrowing will leave the soil in suitable condition for planting.

Berry plants are best purchased from nurseries or growers specializing in their production. Never use plants out of an old berry patch because they are cheap. Only raspberries from inspected fields should be set, as they are practically disease free. Sucker plants of red raspberries and tip plants of black and purple raspberries are as good and half as expensive as transplants. Tip plants, being rather delicate, need careful handling. Well grown one year plants of currants, gooseberries and grapes are satisfactory.

In the garden, red raspberries may be set two feet apart in rows seven feet apart; black and purple raspberries four feet apart in rows seven feet apart. Currants and gooseberries need about five feet between plants each way, while grapes are commonly set about eight feet each way. Set plants slightly deeper than they grew in the nursery with the roots spread out naturally. Work the soil so tightly around the roots that the plants will resist a strong tug when the job is completed. If the soil is dry a few quarts of water in the hole at planting time will insure the plant getting off to a good start. In seasons as dry as have been experienced in recent years in New York state, additional watering and mulching is advisable.

Throughout the growing season weeds must be kept down and moisture conserved. Frequent shallow cultivation will do this very nicely. When

mulching material is available, mulching is superior to cultivation as a method of soil management, especially for raspberries, currants and gooseberries which prefer and grow wild where soils are cool and moist from a natural mulch of decaying vegetation. Suitable materials are straw, rain-spoiled hay, wild grasses or even weeds.

Enough mulch should be provided to keep down weed growth. In a hot dry season, the benefits of a mulch are surprising to one who has always practiced clean cultivation.

WISH AT SPRING PLOWING

By Inez George Gridley.

Spring plowing here has always turned up stones,
But now and then we see an arrow head
Reminding us these fields were battle-ground
With bitter crop of bones and bloody dead.
This field—not one a thousand miles away—
Was scorched with battle fury and with hate!

Here ancient weapons festered in the earth;
For patiently the land must always wait
Until the gentle healing of the plow
Brings blessing to the place where they have lain.
Now may these broad acres mellow in the sun,
And never know the dragon's teeth again!

mulching material is available, mulching is superior to cultivation as a method of soil management, especially for raspberries, currants and gooseberries which prefer and grow wild where soils are cool and moist from a natural mulch of decaying vegetation. Suitable materials are straw, rain-spoiled hay, wild grasses or even weeds.

A home-garden patch of berries mulched with straw to control weeds.

The selection of suitable varieties contributes much to the enjoyment of the fruit garden. The home gardener is chiefly interested in high quality, long season of production and a fair degree of reliability. Several varieties of each fruit are necessary to insure an abundance of fruit throughout the season.

Indian Summer starts the raspberry season about July 1, and ten days later Taylor or Viking will take over. Indian Summer will provide a second crop during late September and October. For culinary purposes, the Sodus purple raspberry will provide immense quantities of berries. Among the black raspberries, Bristol and

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York.

SIGN OF RAIN

"When the fog goes up the hill,
Water will come through the mill."

—Old Country Saying.

What Would Dad Think?

WHEN Henry C. Wallace, father of the present Secretary of Agriculture, was also Secretary, he made the following statement:

"If it cannot be stopped in any other way, Congress should enact a law imposing very severe penalties upon any government official who undertakes to influence either crop production or crop prices. There are too many people in public office who seem to think they ought to exercise some sort of guidance or guarantee over the farmer"

"As is always the case in such periods, many well-meaning men come forward with ill-considered measures. Visionary schemes of all kinds are presented. Some would have the government take charge of all the larger business enterprises. Others would have the government undertake to fix prices, either arbitrarily or indirectly, by buying up surplus crops. The experience of 5,000 years shows the impracticability of such efforts."

If the present Secretary's Dad were still alive, what do you suppose he would be thinking and saying about his son's policies of crop control and government management of the farmer's business?

Better Watch Out

"I fear there will be a tendency for farmers to overproduce because of the War with the occurrences of the last war still fresh in their memories. It seems to me that that would be a mistake. We should hold our production down to about normal and let whatever increased prices there will be show a profit to the farmer instead of a loss following a surplus. Surely it is not for me to advise men, but I wish I could get farmers to be a little more careful, cautious, and thoughtful. That is what I am doing in my own business."

THE ABOVE came to me in a personal letter from the head of one of the most successful cooperative organizations in the United States. This man's ideas about overproduction agree with those of practically all other leaders and economists who have given any thought to the subject. We have an entirely different situation now than the one that prevailed in the first World War. Remember, also, that prices for farm products did not rise much until 1917 when Europe had been at war for three years. Even then, while farmers profited temporarily, it was only a short time before they began to suffer from the effects of tremendous overproduction, and they have continued to suffer from it ever since. Let's not do it again!

Why Nature Grows Brush

I HEARD a farmer once wonder why Nature produced so many worthless things, such as thorn apples in old pasture lots. The answer to that, of course, is that Nature abhors a vacuum, so she hurries to cover the earth with grass, later with brush and trees. So far as she is concerned, it matters not whether the grass or the trees are good for anything or not.

On the other hand, in order to survive, man must improve upon Nature. His grass and his trees must be useful. If his cattle continue to survive on his old pastures, the farmer must fight constantly to keep out the thorn apples and hard hack, the shrubby St. Johnwort, and other brush

Kenneth Baldwin of Burlington, Connecticut, with his prize-winning yoke of 4-H Club steers. Many 4-H and Young Farmer Club members have hundreds of dollars worth of cattle and cash saved from their own projects. No danger of their leaving the farm!

so that good grasses may grow.

Removal of this brush is the first step in pasture improvement. A good time to do it is in early spring. Most of these bushes have shallow, spreading root systems, therefore are fairly easily uprooted. A team of horses or a tractor with a couple of handy men can pull a lot of such brush in a day.

"To keep the brush out after it is once pulled," says Professor Barron of Cornell, "the fertility must be improved so that pasture plants grow rather than brush. Probably a good application of lime is needed, also superphosphate. If the land has been made bare by pulling out the shrubs, sow pasture seed mixture."

You will be surprised what a few days' work each spring over a term of years will do in enlarging and improving the quality of your pasture.

Maple Sirup for Spring Fever

DEAN CARL LADD of the New York State College of Agriculture, reminded me of old times the other day when he told about having several college boys down to the house for the evening and having an old-fashioned "sugaring-off". "My word", said Carl, "how I wish I could stow away three or four dishes of warm maple sugar the way some of those boys did!"

We tapped big maple groves at home, and I always get the "itch" when comes the season of freezing nights and thawing days. The old-timers used to think that new sirup and sugar was the best kind of spring tonic. I knew an old neighbor once who poured the new sirup on everything he ate, including his potatoes. "Good for spring fever", he said.

Well, the season is here again, and the signs are right for a good one from a production end, and I hope from a sales end too. Vermont leads

all the Union in the production of maple products. With thousands of producers in New England and New York, it is the first big springtime job. In New York State about 10,000 farmers sell a little less than a million dollars worth of maple products every year, according to Professor J. A. Cope of Cornell. Too bad there is so much adulteration of this fine, natural product.

Why Potatoes "Ran Out"

IT WAS common belief with us, in growing small acreages of potatoes years ago, that it was necessary to change the variety every few years because, as we said, the variety "ran out." Well, no wonder! There was little knowledge of seed selection, and small potatoes were used for seed, which meant that each succeeding crop was bred from the small, poor hills of the year before.

With sweet or Flint corn the situation was different, because many farmers went through their ripening corn fields and marked the hills for seed that had particularly nice large ears. The result with potatoes was constantly decreasing yields, while with corn some of the old varieties of Flint used by the settlers are still good or even better than they used to be.

It pays to use good seed.

Farming is More Than a Business

"There is a tendency in some parts of the United States to make farming a 'big business' by centralizing the ownership and operation of great areas in one individual or company. The original owner sells his land, voluntarily or otherwise, and becomes a laborer for the company. I am told this has gone on to considerable length in the Far West and the Southwest, and is likely to develop still farther. This will be a calamity to American practice and ideals. The individual ownership and operation of the land, with the home as the center of interest, has been the base upon which our national life has been built. If we lose this we will be reverting to the conditions of the age of the bad barons of the middle ages." — R. P. Kester, in *Pennsylvania Farmer*.

THIS is another argument for emphasizing that farming, unlike any other business, is a way of life as well as a way of making a living. We need not make farming any less of a business, but we can do things to make farming more of a life. That means planning to use more things produced by the farm itself instead of buying them at high retail prices, and it means, also, deliberately planning to have more fun and recreation.

Eastman's Chestnut

MY FRIEND, Dr. E. R. Eaton, not only knows a lot about rheumatic troubles, but he has a grand sense of humor. Last time I saw him he was chuckling over this one:

A lady who was standing on a street corner observed a man, a little the worse for John Barleycorn, leaning against a post and talking to himself. As the woman came nearer she heard the man say:

"It can't be done! It can't be done! It can't be done!"

After hearing this several times the woman's curiosity got the best of her, so she said to the man:

"Sir, what can't be done?"

To which he replied:

"You can't d-d-drink Canada Dry!"

The Folks on Poor Soil

By K. D. SCOTT

I REMEMBER, some years ago, travelling around with some representatives of New York State who were obtaining option; on some near abandoned farms in an area which later became the Pharsalia (Chenango County) Game Refuge. It was in the late fall. An approach was made to a little house. An elderly lady appeared in its doorway and stood there, barefooted, listening to the offer of a very gentlemanly forester who told her of the state's readiness to buy the place. In the midst of her defamation of all intending land buyers in general and these option getters in particular, she became conscious of her bare feet, and curling her toes rather nervously around the edge of her door sill, she concluded her remarks by saying: "I've scratched gravel on these hills, with my bare feet, for fifty years, and I will dig my toe nails into it for fifty more, if the Lord will give me strength—you can't have this farm—no, sir."

A country may go through many changes, and its soil may deteriorate, but with women such as this its spirit remains unconquerable.

I know another couple who, given certain her qualifications, would be what the New York State Agricultural Society calls "Century Farmers." They are the fourth generation of one family to occupy their farm. They have a beautiful home, clean and spacious, and with many modern fixtures, but they lack electricity and cannot have it because their farm is located on Class II land. It is just over the edge of the line drawn between Class II and Class III land.

These examples illustrate my contention that the population on land classed as II may consist of men, women and children of a quality which no nation can afford to forget, and also to emphasize the fact that in our land classification work we must give more consideration to the people who live on that land and have no other place to go, as well as to the quality of the land itself.

For a lifetime, in fact until just recently, we in Chenango County did not know how many people were living on land Class I and II. We have lately found out that we have about 850 families on farms and in rural residences. If we take the average size of 3.9 persons to a family in Chenango County, and multiply this by 850, it gives us an estimated population of 3,265 people on the Class I and Class II land of Chenango County. No one used to know how many people there were in the whole state living on Class I and II. It is now estimated that there are 71,000. The question I want to put to you is, do not people, as well as land, rate as a

major problem in any land-use study?

Of course, facts force us to recognize the smallness of yields under some of the methods now being followed on Class II land. We agree that many farmers on this kind of land have a difficult if not impossible problem of making a living. But, on the other hand, there are numerous examples to be found of men who have applied better methods, such as those specified in the Farm Bureau programs, to some parts of these land classes, with the result that these methods have entirely changed the results obtained from the land. For example, I know one good farmer who grows nearly all his

place in nine years, the last nine years during the depression. They paid for their herd of cows, and they got a new car. They sold the herd last fall, determined to buy a better herd this spring. So they had 100 tons of hay to sell, 1000 bushels of oats, and 1200 bushels of potatoes. On the basis of the number of loads of hay drawn in last summer during the drought year, they were only short one load as compared with 1938.

I wonder if land classification should not be based on the capabilities of the soil under good management rather than on the results which have been obtained from poor management?

common justice, we must have a program of service for the thousands of rural folks on Class II land in New York State, and for proportionate numbers of people on poor lands of other states.

Our research men are better able to make out that program than I, but I would like to offer the following suggestions:

I. Reforest Class I land, that is, our very poorest lands, or use them for recreational purposes.

II. Reforest poorer parts of Class II lands as rapidly as possible.

But remember that at the present rate of land-purchase by New York State it will take 150 years for the state to buy up all of the land classed

If the thousands of people who live on Class II land must stay there, they are as much entitled to good roads, schools, electric and other public services, as those who live on better land.

grain on a Class II farm for a large herd of cows which he keeps on a Class IV farm. I know people living on Class II land who produced such good yields of hay in 1938 that they carried over sufficient to beat the shortage caused by the drought of 1939. I know another family which came to live on a farm on one of the highest hills. The farm is level, and consists largely of Lordstown silt loam. Contrary to my expectations, this family paid for the

The whole problem boils down to the question of what can we do for both the land and the people on our poorer soils, for both the economic and social problems of this great tract of land throughout our Northeast and the United States. Some believe that we should close out the farm business on both Class I and Class II land as rapidly as possible, and get it back to growing trees or use it for recreational purposes. That is all right for Class I land, which everyone recognizes as being so poor that it has no present or future possibilities for farming purposes. On much of Class I land the people have already left, or have turned to making their meagre living mostly in some other way.

But the policy of reforestation for all of Class II land in my opinion does not apply, chiefly because of the thousands of good farm folks who still live on this land, and who still maintain their independence. It is evident that we cannot in fairness follow the course of abandoning public services on Class II land, because there is and will be for many years to come a social problem — the people will be there a long time. As a matter of just plain

as I and II. No land at all is to be purchased on this year's program. In other words, our part of the state has been settled for 150 years, and it will take probably as much longer to close all of Class I and Class II land out of farming. In the meantime, what about the 71,000 people, or their descendants, who are going to continue to live on this land? I maintain, therefore, that we may as well consider the problem of service to these people to be a permanent one, and make up our minds to live with it, and solve it if we can.

III. Study possibilities of more productivity on better Class II lands.

The results obtained from twenty years of experimentation on the abandoned farm operated by Cornell University at Virgil furnish those of us who have any imagination with all we need to ask.

IV. Instead of abandoning public service for people on better parts of Class II land, we should increase it.

Specifically, this means the continuation of Farm Credit work as well as Farm Security and emergency crop and seed loans. It is just as logical to

(Continued on Page 18)

EDITOR'S NOTE: According to the New York State land classification plan now in use, lands are divided into seven classes. The higher the number, the better the land. Class III is the lowest grade of land that is expected to stay permanently in agriculture.

You will be interested in the article on this page written by K. D. Scott, county agricultural agent in Chenango County, New York, in which he emphasizes the problems of the people who live on the poor lands.

The land classification plan is interesting and useful. For example, it will help to prevent strangers, tempted by low land prices, from investing and losing their lifetime savings by paying more than the land is worth. We think also that those making the classifications have considered the people on these lands and of course have made the classifications in order to help the folks, but possibly a mistake has been made, particularly with the people on Class II land, in thinking that this land could be taken out of farming in a rather short time. Also, as Mr. Scott suggests, there is a real problem of maintaining good schools, roads and electricity on the lower class lands.

DIBBLE'S

Tested Seed Corn

Nice looks or germination alone, doesn't make good seed corn. You need SURE production, maximum maturity. These come from years of GOOD breeding. PLAY SAFE with Dibble's vigorous, hardy, acclimated, high germinating Seed Corn. Priced low enough to permit general and liberal planting. And you get the BEST. It's ALL Northern Grown, ALL high test. We guarantee every bushel. We SELL subject to YOUR OWN 10-day test on money-back basis. You take no chances on these tested "Dibble quality" varieties.

WHAT'S NEW in Vegetables?

By PAUL WORK

THERE is always something new in the vegetable seed catalogues; if not new names, at least new stocks of improved merit or better adaptation to special conditions. The list of new varieties for 1940 is not as long as usual but there are still many from

Paul Work

the previous year or two that have not been as widely tried as they deserve.

Of course, no commercial grower should make sudden changes in his planting stocks if he can avoid it but every grower should be planting small samples of offerings that may or may not prove better for his farm and his market.

Cornell Extension Bulletin 426,

"Varieties of Vegetables for 1940", tells some of the more recent developments. County Agents and *American Agriculturist* have lists of sources from which these items may be procured.

Yellow tomatoes have always commanded a mild interest but they have not been widely planted, to a considerable extent because people are accustomed to red. Dr. T. M. Currence of the Minnesota Experiment Station, is the breeder of a new yellow, *Min-gold*. It is as early as Bonny Best, prolific, of orange yellow rather than pale yellow color, round and smooth. Thus, it corrects a good many of the weak points of the old Golden Queen. It grows well and has found favor in many sections. It received Silver Medal Award in the All America Selections for 1939.

Ioana is a new sweet corn from E. S. Haber of the Iowa Experiment Station. This is a hybrid from inbreds, a little later than Golden Cross but with somewhat larger ear, and fewer suckers. It seems to be tolerant to heat and drought and is reported to give good yields under severe summer conditions. The husk is long and tight which may be of some value in resistance to ear worm injury and it is resistant to Stewart's disease.

The *Plentiful* bean is finding a place as a substitute for Bountiful. The walls are thicker, it is longer and straighter, and yields well. With us, it has been somewhat later than Bountiful. This received a Bronze Medal in the All American Selections in 1938.

New Yorkers have been much interested in the Rutgers tomato which possesses cannery and juice characteristics that are outstanding. Well bred strains are deep in form but it is pretty late for upstate New York. Dr. L. G. Schermerhorn of New Jersey has developed an *Early Rutgers* which shows promise. It is four or five days earlier. There is reason to suspect that some strains offered as early Rutgers are not any earlier than the regular strains.

The *Bunching* carrot has been bred as a new member of the long bunching group by Dr. O. H. Pearson of the Eastern States Farmers Exchange. It is more cylindrical than the other members of this group, stump rooted, smooth, with small orange colored core. It bunches well but tops may be a little large for very favorable growing conditions such as we have on the mucklands.

Deep Heart Fringed endive is so much deeper and so much more self

blanching in the heart than the old endive that is well worthy of trial.

The West Coast depends almost entirely upon the *Klondike* watermelon, and a few growers in New York are wonderfully pleased with it. It is the result of scientific breeding and is exceedingly uniform in its high quality. The seeds are small and many forget them in the eating. It is not very early and not as large as the Southern melon, but certainly big enough for all ordinary purposes. One wonders why market demand has so greatly favored 30-pound melons which are too big for most families. The rind is tender and it will not stand rough handling but we are willing to use a little care to protect things that are really good.

Among things that are not strictly new, may be mentioned the *New Hampshire* eggplant which is early and prolific; the *Seneca Bender* melon which is well adapted for crating, being smaller and more uniform in size than the old Bender; early strains of *California Wonder* pepper; *Marcross 6* among hybrid sweet corns which comes in ahead of Golden Cross; the *Baby Potato* and *Baby Fordhook* limas, primarily for cannery and freezing; the *Early Grano* onion now called *Babosa* by one large seed house.

Up-to-Date Spraying for Apple Diseases

(Continued from Page 1)

ing the so-called high-powered spray rigs.

Perhaps the most significant development in recent years in spraying for apple scab is a decided swing away from lime-sulfur to the wettable sulfurs. Not many years ago, many state spray charts listed lime-sulfur for each spray in the scab control program. In recent years, the tendency has been to restrict the use of lime-sulfur, particularly liquid lime-sulfur, to the early season applications including the petal-fall spray. Along with this restriction, the dilution of liquid lime-sulfur has been reduced from 1-40 to 1-50, and in some instances even to 1-60 as the standard strength for spring sprays.

Still more recently, there is some tendency to replace lime-sulfur altogether by a wettable sulfur for the scab control program. One reason why such a change is possible is the arrival on the market of grades of wettable sulfur far superior to most of those available a decade or two ago. Growers nowadays, too, are more spray-injury minded than they were a few years ago.

In spite of the fact that good, new brands of wettable sulfur are increasing (Continued on opposite page)

"Shucks! He wasn't calling us—he's asleep."

ing and are replacing to a considerable extent lime-sulfur in the scab control program, yet they are purely *protective* sprays and cannot be expected to burn out scab spots as do liquid and dry lime-sulfur. Furthermore, the significant factor in their use is not which one to use—for they are all good—but *thorough* applications made frequently enough to keep new growth protected.

The Massachusetts 1940 spray chart for apples leaves it optional for the grower to use lime-sulfur or a wettable sulfur through the calyx spray. However, it specifically discourages the use of lime-sulfur more than once in the pre-cover sprays, and then primarily as an eradicant spray or to finish an application after the termination of an infection period.

Valuable Place for the Duster

In Massachusetts, dusting has for years been advocated as a supplement to spraying during the early season scab control program, and it is a standard treatment for prevention of scab during the summer, beginning with the second cover application. With the gradual reduction in use of lime-sulfur, dusting is now used extensively by many growers: (1) to finish promptly an application of spray ahead of rain; (2) to finish a spray application that was interrupted by the rain, by dusting either during the rain or immediately afterwards; and (3) to protect the new growth around mid-bloom, especially when the blossom-period promises to be a prolonged or wet one. It is recommended that if the owner of a large orchard, is unable to cover all his trees with the sprayer in two days or less, he might better own a duster, too.

Fall and Dormant Sprays for Scab

One of the most recent developments in the control of apple scab is the spraying of the orchard floor during dormancy to destroy the scab fungus that overwinters in the old leaves. Back of this idea, I am convinced, is just one more effort or excuse to get away from lime-sulfur and the tree injury it causes. A few years ago, when lime-sulfur was used so liberally, there was little if any occasion to consider seriously a dormant eradicant spray in the scab control program. The theory of this eradicant spray is this:

If you can destroy without too much difficulty and expense the principal source of scab spores, it will be much easier to prevent infection in the spring and also during the remainder of the summer. In addition, perhaps the early season control of scab can be so readily effected, even with the milder forms of sulfur, that there will be less need for sulfur during the summer when a summer oil spray could be applied to advantage to combat certain insects.

In Wisconsin it was found possible

to reduce almost completely the formation of scab spores in the old leaves on the ground by spraying the trees after harvest, but before leaf-fall, with a special Bordeaux mixture containing the arsenites of zinc and calcium. However, it has been difficult to locate a spray that is highly effective and at the same time entirely safe for all varieties under most conditions.

Later on, the same investigators ran parallel tests using dormant or spring sprays on the orchard floor. One of the first materials tested was sulfate of ammonia dissolved in water at the rate of 100 pounds in 100 gallons of spray and applied in the spring of 1936. This killed all of the mature spores and checked further development of the scab fungus in the old leaves. Since then, other materials, such as "Elgetol" at 1 per cent, and a combined spray of nitrate of soda (100 lbs.) and calcium arsenite (4 lbs.) in 100 gallons of water, have been tested at the Wisconsin and New York stations, resulting in practically a complete prevention of spore formation in all leaves that were thoroughly wet with the sprays.

Mention of this recent development in methods of combating apple scab is not made here in order to encourage growers to adopt the practice generally, because the entire project is still in the experimental stage. There are too many aspects of the problem to be worked out, especially regarding the cost of the treatment, its effectiveness over a number of years, the possibility of objectionable residue in the soil, etc.

The following suggestions are being made in this state for growers who wish to test in a limited way the effect of such a dormant spray on the orchard floor: (1) Do not undertake the treatment unless you usually have a scab problem and unless your foliage was noticeably scabbed last fall. (2) Apply not more than one or two tankfuls of the mixture, and spray that side of the orchard from which the wind usually blows in the spring during rainy periods, so that the spores will not blow from the unsprayed area of the orchard onto the treated area. (3) Make the applications before the fruit buds show green. (4) Apply at least 450 to 500 gallons to the acre, preferably spraying from opposite directions so that thorough soaking of all leaves is obtained. (5) Use regular spray outfit, with normal pump pressure in order to kick up and wet all leaves that would normally be turned up by the wind later on. (6) Give preference to one of the spray mixtures mentioned above, or try liquid lime-sulfur 4-100. (7) Then carry out the usual scab control spray program and look for differences in primary infection in the two areas of the orchard, also in fruit infection at harvest.

—Photo Courtesy of Pennsylvania State College of Agriculture.

Taken about mid-April, this shows the tip of a McIntosh bud infested with green and grain aphids. A delayed dormant spray at this time will catch them and prevent their rapid multiplication.

SOD + SULPHATE = BETTER CORN

Domestic SULPHATE OF AMMONIA, broadcast at 200 pounds per acre, on sod land before spring plowing for corn, promotes rapid decay of the sod, reduces "firing" of the corn and furnishes extra nitrogen to produce extra bushels. This extra nitrogen is placed deep down where feeding roots can get it during the hot, dry weather of mid-summer.

If sod land is fall-plowed, harrow in Domestic SULPHATE OF AMMONIA deeply when preparing the land for corn—the deeper the better. Try using SULPHATE on some of your sod land this spring. It supplements the fertilizer you apply at planting and produces profitable increases in corn yields. Use 200 pounds per acre and tell your fertilizer man you want Domestic SULPHATE OF AMMONIA, made in the U.S.A.

for FRUIT Domestic SULPHATE OF AMMONIA, applied to fruit trees, strengthens the bloom, betters the set and increases the yield.

for GRAIN Domestic SULPHATE OF AMMONIA, at 100 pounds per acre applied early on winter wheat, usually adds 5 to 7 bushels per acre to the yield.

for GRASS Domestic SULPHATE OF AMMONIA, at 200 pounds per acre, applied *real* early produces a luxuriant growth of high-quality feed.

ON GUARD

against Low Milk Prices **NEXT SUMMER**

A LIVING PRICE FOR MILK doesn't just happen. Something always has to make it happen. Today we are profiting from better prices because of the work done by cooperative leaders during past years. Today we are enjoying rights and privileges WON through constant battling to protect the price of milk and our standard of living.

We have successfully fought all efforts waged by unscrupulous and selfish dealers in their effort to get surplus milk that they could use as fluid.

Today a wall of protection is being thrown up against low prices next summer. Cooperative leaders are negotiating in Washington and Albany constantly to make certain that this wall is strong enough—to make certain of amendments which will guard milk prices to the greatest possible extent during the flush period. Many of these cooperative leaders have been forced to remain away from their homes even on Saturdays and Sundays in order to battle for this protection.

Every dairy farmer should understand the efforts that are being made today and every day by the leaders of their cooperatives. A LIVING PRICE FOR MILK was won by this vigilance and it must be preserved by this vigilance. But cooperative leaders are not waiting until prices have crashed before trying to do something—they are busy now to PREVENT it.

Our organization urges that all dairy farmers understand the tireless efforts which are being made TODAY and every day to guard their milk checks, their homes and their standards of living. Every farmer must realize by now that only organization and cooperative effort can provide this protection.

Potato Plans for 1940

By E. V. HARDENBURG

THE U. S. Outlook report for 1940 indicates an increase of about 100,000 acres of potatoes over 1939. This represents a 30 per cent increase in the 18 early and intermediate potato states and a 3 per cent increase in the 30 late states. With average potato weather, this might mean a total U. S. crop of 384,000,000 bushels or 23,000,000 bushels more than the crop of 1939. Apparently, 1940 is not a promising year to increase plantings. It looks like another one of those years when only the grower who gets high acre yields of quality potatoes will find potato growing very profitable.

Choosing the Field

The field which had a good stand of clover and timothy in 1938 and 1939 is not necessarily the best one for potatoes in 1940. It may be infested with wireworms. Heavy, wet, poorly drained, shallow soils are not likely to produce good yields of quality tubers no matter what the investment in good seed, fertilizer, tillage and spraying. Such soils generally produce darker skinned, poorer shaped, lower quality potatoes than do well aerated soils. Furthermore, damage from the wheat-wireworms is sometimes worse on tubers harvested from poorly drained fields. One should be cautious about planting fields which in 1938 and 1939 were in old pasture or in old grass sod. Both wheat wire-worms and white grubs are favored by such conditions. The year 1941 is predicted to be the next bad grub year. Hence, the fields which are to be planted to potatoes next year should be free of grass sod this spring, especially in those areas where white grub injury is sometimes serious.

Since 1939 was an abnormally dry year, scab was worse than usual in the crop. This means that more scabby seed than usual will be planted. Such seed, if used, should be treated by the approved formaldehyde method.

Early Planting

In a big crop year, the early market is often more profitable than the late. Early planting facilitates early harvesting and more nearly insures a mature crop which is of better keeping quality as well as better cooking quality.

The trend in fertilizing potatoes today is toward heavier applications and the use of a somewhat higher proportion of potash and nitrogen in the mixture. For the heavier soils, a mixture of 1-2-1 ratio such as 10-20-10 or 5-10-5 is recommended. For the lighter soils and for muck, a 1-2-2 ratio such as 8-16-16, 5-10-10 or 4-8-8 is suggested.

Green Manures

This may be a good year to grow a green manure crop to plow under for the 1941 potato crop. Where stable

manure is not available for the usual potato acreage, organic matter may limit both yield and quality. In a sense, green manure may be called the "poor man's fertilizer". The organic matter supplied in this way improves water-holding capacity, provides necessary aeration, and increases the availability of mineral nutrients present naturally in our upland or mineral soils. Rye, of course, is the best winter crop because it is cheap, has a wide soil adaptation, and will germinate and grow at low temperatures. For a summer green manure crop to grow on the more acid soils, corn, Japanese millet and Sudan grass are suggested. They may be seeded about June 15 and plowed down before September first in time to seed rye. They should be fertilized at time of seeding to insure good growth, and an application of some cheap source of nitrogen such as sulfate of ammonia, nitrate of soda or cyanamid applied just before plowing. This added nitrogen helps to insure decomposition of the organic matter before potato planting time. On the less acid soils, such legumes as red and alsike clover, soybeans, and sweet clover may be substituted for the non-legumes listed above, but, in general, they have not proved as productive of high yields of potatoes as the non-legumes.

Choice of Variety

For muck soils, Chippewa and Warba are good early varieties while Katahdin is highly recommended for the late crop. For upland soils, Cobbler and Chippewa are good varieties for the early crop. For the late crop, Katahdin and Smooth Rural are well adapted to upland soils. Katahdin is said to be more resistant to "Z" disease and to yellow dwarf than is Rural. However, it sets rather shallow and being subject to sunburn, should be planted deeper than Rural. Green Mountain should be planted only on the lighter soils and at the higher cooler elevations.

SMALL FRUITS for Home Use

(Continued from Page 3)

Cumberland are at the top in quality. If only one is wanted, Bristol is preferred. In late July the Eldorado blackberry is the mainstay of the small fruit garden.

Currants and gooseberries ripen in early July and are indispensable for jelly and jam. Green gooseberries make excellent sauce and pies, but are little used for this purpose now. Red Lake and Perfection are two of the best currants for home use. The Poor-man gooseberry is the best red variety and of superior quality. Chautauqua is a large-fruited English type gooseberry.

In late August the earliest grapes are ready. Van Buren, a new blue variety, is ripe soon after August 20th; and by September 1st Fredonia, another blue grape, is ready. Ripening with Fredonia are Ontario and Portland, both green varieties. Where frosts come too early for Concord to mature, these varieties will be the mainstay of the vineyard. Concord is known to all and should be in every planting. Likewise well known are Niagara and the delicious little Delaware. Concord Seedless is an interesting novelty. Where seasons are a week or ten days longer than necessary to ripen Concord, Sheridan will provide high quality fruit that will keep until Christmas. Golden Muscat is sensational because of its very large clusters and berries and its rich characteristic muscat flavor.

"It's a new type of hen's nest my son sent down from the City!"

BUILD FOR GREATER DAIRY PROFITS

Free plans show how to build sanitary improvements of Concrete

CONCRETE plays an important part in making your dairy pay. A concrete floor keeps cows healthier; is easier to clean and disinfect; doesn't absorb odors; is wear-proof, fire-proof and vermin-proof.

Build at low cost with concrete, and you know it will last for a lifetime. Do the work yourself or ask your cement dealer to recommend a concrete contractor. Let us help by sending free plans and suggestions. Check list below.

Concrete milk houses and cooling tanks make it easy to keep milk clean to handle it efficiently—prevent the losses that result when milk is graded down.

Or perhaps you need a new feeding floor, poultry house, grain bin, storage cellar, or other modern improvements.

LE ROY PLOW COMPANY,
LE ROY, NEW YORK, U. S. A.

By L. B. SKEFFINGTON

From SKEFF'S NOTEBOOK

A FINE project of boosting is being done by the New York State Cold Storage Apple Promotion Committee, of which James G. Case of Sodus is chairman. Several thousand dollars has been subscribed by the storages and major promotional activity is being conducted through the schools of the state. Webster J. Birdsall, director of the Bureau of Markets, is secretary and treasurer and E. Stuart Hubbard of Poughkeepsie is in charge of promotional work.

Cooperating with the committee is the New York and New England Apple Institute. Some time ago institute directors felt that a great opportunity for promoting use of apples was to be found in the schools. Mr. Hubbard personally contacted school officials in New York, Albany and elsewhere upstate. The school authorities agreed that schools had no material on the subject of apples and their use. An agreement was made that if material suitable for school use could be provided, the home economics departments would get behind it.

Hubbard Prepares Material

Next Mr. Hubbard began the assembling and preparing of material. An attractive little booklet, "Apples for You," was issued first. Recipes were prepared by a home economist and factual material by Hubbard. The text is well illustrated by line drawings.

Pamphlets on how to keep apples and the health and food values of apples, together with extracts from nutritive research on apples by Dr. Ira A. Manville, were made available. The response has been gratifying.

The aim of the campaign, of course, is to increase consumption of apples. It is believed that by working through the school teachers and pupils many thousands of homes will be influenced in this direction.

New Soil District Bill

The state college, extension service and farm organizations generally have given their approval to a new soil conservation district bill. Last year a somewhat similar bill passed both houses of the Legislature but was vetoed by the Governor, presumably because it contained points unsatisfactory to the interests involved. The new bill has been endorsed by the Conference Board of State Farm Organizations.

It provides that a state soil conservation committee shall consist of the dean of the State College of Agriculture, director of the extension service, two qualified farmers and, by invitation, the coordinator of the soil conservation work in the state. This committee shall have advisory and coordinating power with relation to districts.

Chief change is the manner of setting up districts. Each Board of Supervisors would be empowered to make the county a district and appoint a committee of five to administer it. Two would be board members, two members would represent the Grange and Farm Bureau and the other would be a qualified farmer. The districts would be empowered to obtain official cooperation from the state committee, various state, federal and county agencies.

There seems to be a tendency upon the part of some persons to confuse this program with the agricultural conservation program. That applies to benefit payments to individual farmers for soil-conserving practices. The soil conservation program would deal with more general or area problems of soil and water conservation, reforestation, stream control, etc.

A bill passed by both houses of the Legislature, and now requiring only the governor's signature to become law, is

the subject of much discussion among growers and shippers of produce. It provides that fees for inspection of farm products shall be on a computed basis, including overhead costs of the Department of Agriculture and Markets.

Apparently none of the farm or shipping groups were consulted about the bill. They assume that it means an increase in fees. The bill originated in the budget bureau and is considered a move to increase state revenue. Users of the service contend that it now is on a practically self-supporting basis, and that in many instances the inspection fees are higher than charged in other states. In some quarters it has been suggested that fees for inspection service ought to be reduced to encourage more general use of grades.

Should it be found that fees now received for inspection and certification do not fully meet all costs of the service, another argument is that the service performs many jobs constantly for the general welfare of agriculture and the public. It is pointed out that food, cold storage, nursery and other inspections are not charged for, nor are the interests affected asked to pay directly a share of the overhead cost of the department. There seems little doubt that the governor will be asked to veto this bill on the ground that it imposes unfair, unnecessary and confiscatory costs on movement of farm products.

Chandler Tours W. N. Y.

John Chandler of Sterling Junction, Mass., president of the New York and New England Apple Institute, spoke at five county fruit meetings in Western New York. He told them that in his considered judgment the institute had done an excellent job of stimulating apple movement with the small amount of funds available. He reviewed briefly that every other organization for the promotion of apples had failed, but that the institute had been able to come through five years in sound condition.

Beneway Boosts Retailers

Frank W. Beneway of Ontario, chairman of the Western New York Peach Committee, has addressed a letter to all members of the Ways and Means Committee of the House of Representatives in opposition to the Patman chain store bill. He reviews cooperation given to the growers by retail groups and says: "In the last decade corporate chain store groups and independent store groups have developed rapidly. Consumer demand for better quality goods, plus more efficient merchandising, have made economies necessary. The store groups have tried to meet these economies, both from the standpoint of handling food efficiently and from the standpoint of profits. The farm groups have been asleep in not fully availing themselves of the possible facilities for distribution and advertising which these store groups can give and seem willing to give."

Standard Package Bill

Of particular importance to fruit and vegetable producers is HR 5530 now before Congress. This bill aims to standardize apple boxes, crates, cartons and other packages in the same way that peach baskets were standardized a few years ago. The bill would provide for certain sizes, and would restrict packages to these sizes, making all others illegal.

As at present written it establishes the 1 bushel and the 1 1/4 bushel as standard, but makes no provision for

1 1/8 or 1 1/5 bushel, which are the commercially accepted capacities of the popular apple crate used so widely in New England. This crate in its present form would be outlawed in the same way that the 14 quart peach basket was made illegal.

Only loophole apparent as bill is now drawn up is that it exempts packages which are sold solely on basis weight or numerical count. It, however, specifically states that such packages as well as the standardized sizes shall not be deceptive in appearance.

Upstate Potato Markets

For the past two weeks the potato market has been steady. Indications are that supplies of good stock are scarcer than they have been heretofore. State trade mark pecks have advanced 1c. Wholesale price is now 31c delivered at central New York points. U. S. No. 1 pecks are bringing 25c to 27c delivered. U. S. No. 1 Size A, brushed, in new bags, are bringing \$1.50 to \$1.60 per cwt. f.o.b. shipping point. Size A means that at least 20 per cent of the potatoes are 2 1/4" or over. Combination grade is bringing \$1.25 to \$1.35—mostly \$1.30.

The severe freeze last week froze back potatoes in Alabama, and will extend the old potato season another week or ten days. This, plus damage done by previous freeze, should enable a good percentage of old potatoes in the Northeast to be marketed in an or-

derly fashion.

Certified seed potatoes proven free of virus diseases by southern test are scarce. Demand is good, and current prices average about \$2.50 per hundred f.o.b. for Russet Rurals, Smooth Rurals, Green Mountains, and Cobblers.

Certified Chippewas and certified Katahdins are still selling at \$2.75 a hundred f.o.b., with supplies very limited.

Since good seed is one of the prime factors in profitable potato production, all potato growers should seriously consider the advisability of having their requirements covered at an early date.

Neighbors Honor Jared Van Wagenen, Jr.

JARED VAN WAGENEN, JR., of Law-Yersville, Schoharie County, New York, was given a real surprise party recently when 150 of his friends gave him a testimonial dinner at the Hotel Augustan in Cobleskill. For many years Jared has been a figure in New York State agriculture. He has ap-

Jared Van Wagenen, Jr.

peared on countless Farmers' Institute programs and has been a contributing editor to *American Agriculturist*. We voice the sentiments of many of his friends when we say that he is one of the outstanding agricultural writers of his time.

Present at the banquet were Commissioner of Agriculture H. V. Noyes; Berne A. Pyrk, former Commissioner of Agriculture; H. B. Knapp, Director of the Farmingdale State School of Agriculture, and many others. Governor Lehman and Mrs. Franklin Roosevelt sent letters of congratulation.

Following the banquet, Toastmaster Frank Ryder, as a representative of those present, presented Mr. Van Wagenen with a set of Sandburg's *Life of Lincoln*.

National Percheron Show at State Fair

PLANS are already well under way for the 100th anniversary of the New York State Fair, to be held Aug. 25th to Sept. 2nd, inclusive at Syracuse.

The first announcement regarding the 1940 fair features carries the news that the National Percheron Show, hereto always held either in the Midwest or on the Pacific Coast, will be staged in connection with the Fair centennial.

Prize money totalling \$5,500 has been set up for the show, State Fair Director Paul Smith announces. The premiums offered, the splendid facilities of the fair for staging the show and the ever-increasing Eastern interest in breeding combined to enable the fair to secure the colorful horse event.

More than 200 Percherons will be shown, Ellis Mc Farland, secretary-treasurer of the Percheron Horse Association of America, estimates. Heaviest entries are expected from Indiana, Ohio, Maryland, Pennsylvania, New Jersey and New York.

The National Percheron Show will run five days. A discussion following each day's judging, led by Percheron authorities, will constitute a school for breeders.

The Percheron event will be held in addition to the fair's regular horse show, which is expected to draw more than 500 entries in the farm, draft, commercial and breeding classes.

Dairymen's League Reports Few Withdrawals

The Dairymen's League reports 1258 withdrawals during the regular withdrawal period. With two exceptions, this is the smallest number of withdrawals for the past ten years. Judging from what has happened in past years, not all of these withdrawals will become effective. There are always many who reconsider before the first of April.

NORTHEASTERN DAIRY CONFERENCE

By LELAND SPENCER

Leland Spencer

THE FIFTH annual meeting of the Northeastern Dairy Conference was held in Providence, Rhode Island, March 7 and 8. As readers of this column may know, this conference is an organization of cooperative dairy associations with State departments of agriculture and agricultural colleges as associate members. The principal activity of the Conference is the annual meeting, at which problems of mutual interest to the members and associate members are discussed. Among the topics discussed at this year's meeting were:

- Newer developments and needed changes in State milk control
- Coordinating State and Federal milk control
- Responsibility of the producer in milk control
- Milk production control
- The food-stamp plan
- Outlook for the dairy industry in the Northeast
- Efficiency in milk production
- Changing methods of distribution.

Between 200 and 300 persons were present at each of the sessions. At least half the program had to do with public control of the milk industry. A banquet speaker who lauded self-reliance as a cardinal virtue was somewhat out of tune with his audience.

In this short article it would be impossible to give anything like an adequate review of the many papers and discussions of this two-day meeting. I shall therefore limit my comment to one session that was of particular interest to me—the one on milk production control. The leader of this discussion was Dr. John D. Black, of Harvard University.

At the outset Dr. Black said he was unwilling to consider any proposal for production control of milk except as part of a broad program for the dairy industry. He proceeded to outline five essential parts of such a program, namely:

1. Consumption adjustment, taking the form of a general increase in consumption, plus occasional stepping up to take care of emergency situations.
2. Output adjustment—to take care only of temporary overexpansion of herds due to delayed culling, the raising of more calves, and the shifting of cattle from beef to dairy production.
3. A general reduction in costs of production.
4. Reduction in costs of distribution.
5. A limited amount of control of fluid milk markets.

Dr. Black stated that "we have a large persistent under-consumption of dairy products in this country." He believes that a substantial increase in consumption of milk, as well as butter and cheese, can be brought about by offering these products to consumers with low incomes at prices they can afford to pay. In hard times, like the present, this requires the payment of subsidies.

There's no doubt that poor people will use much more butter and cheese when these products are sold at half

price or given away by relief agencies. It may take a much larger subsidy to bring about equally large increases in the sales of fluid milk. The possibility of greatly improved demand for dairy products, and therefore higher prices, through an increase in business activity and employment at good wages was not mentioned in Dr. Black's discussion. If it were not for this, the outlook for dairymen and other farmers would be dark indeed.

With respect to "output adjustment," Dr. Black stated that "the fluctuations in output of dairy products in this country are not wide enough to warrant any general full-fledged program of control with quotas and penalties." He pointed out that year-to-year variations in milk production are only about 5 per cent, compared with 25 per cent for cotton, 15 to 20 per cent for potatoes, and 20 per cent for wheat. Apparently Dr. Black believes, as I do, that the general level of production of different crops over a period of years will be controlled more satisfactorily by supply and demand prices than by a quota system or by arbitrary regulations.

In emergency situations, Dr. Black would approve of "output adjustment" for dairy products. The most logical method, he says, is to increase the appropriations for disposal of diseased cattle, for moving dairy animals into the South, and to pay bonuses for extra culling of cows. He prefers this to more direct methods of controlling production because he believes the extra culling would help to reduce the costs of producing milk.

"It should be understood," says Dr. Black, "that such a program would not raise prices of dairy products to the high levels some dairymen think are right." With this we readily agree. Over a series of years, the farmers' income from milk will depend mostly upon the general price level and upon the buying power of consumers.

Milk Prices

New York—E. M. Harmon, Administrator of the Federal-State Milk Marketing Order for New York City, has announced the February price for 3.5 milk in the 201-210 mile zone as \$2.10. This price is 4c less than the price for January, but is 35c higher than February a year ago and is the highest price for February since 1931.

Rochester—For the Rochester area, Administrator Lawrence Clough has announced the uniform February price as \$2.38.

A new cooperative organization of about 100 dairymen is being formed to become a member of the Rochester Bargaining Agency. It is estimated that formation of this cooperative will bring into the Agency about 30 per cent of the producers at present unaffiliated.

Buffalo—Douglas Lasher, Administrator for the Buffalo Marketing Order, has announced the uniform price of \$2.01 for February, plus a 20c differential for direct delivery. This is 5c below the January price.

Time to Treat Seed

A few hours and a few cents spent for material for treating seed oats and barley this spring will in many cases save many dollars in a larger harvest later.

Dust methods of treatment are now regarded as better than the wet formaldehyde and hot water method. New cersens will do the trick. Full directions come with every package.

ON THE National NEWS

Farm Bill Passes Senate

CONGRESSIONAL economy drive vanished into thin air recently when Senate Appropriations subcommittee approved a 297 million dollar increase in farm bill, raising total to \$958,000,000. President Roosevelt in his budget had recommended total of \$788,929,519, and House had pared this to \$749,561,000. Senate committee increase includes 212 millions for parity payments and 85 millions for surplus disposal.

In addition, Senate committee found another 160 millions for agriculture by directing Reconstruction Finance Corporation to lend 100 millions to farm agencies, and by shifting 60 millions of benefit payments from this year's funds to next year. In all, this provides more than a billion dollars for agricultural programs under Secretary Wallace for fiscal year starting July 1st. Senate has just O.K.'d the bill.

If farm bill with Senate increases is finally passed, it will wipe out nearly all of savings previously made by the House on ten different annual appropriations, and confront Congress once more with dilemma of finding new money either by raising taxes or boosting national debt limit above 45 billions.

SLANT: Government subsidies to farmers on a large scale were supposed at the start to be on an emergency basis, but instead of being withdrawn as conditions have improved, they have increased. With this country staggering under a national debt of nearly 45 billions, most intelligent farmers are coming to see that they would be better off in the end if reckless spending were curbed. Continuation of huge subsidies that will raise the national debt limit, or force new taxes, will only be a stone around the necks of both business men and farmers.

Farm Credit At the Crossroads

IN RECENT issues, *American Agriculturist* has reported rapid and fundamental changes in Farm Credit Administration. Last issue we reported forced resignations of key men long in service of Farm Credit. Since then, Albert Goss, Commissioner of Land Banks, prominent Granger, with a record of 15 years of Farm Credit service, is definitely out.

To save cooperative features of Farm Credit, and to save it from other changes which they believe to be destructive, farm organizations, including Grange, Farm Bureau, and National Cooperative Council, got a bill introduced into both Houses of Congress to restore administration of Farm Credit to an independent basis under a non-partisan Board. This bill is known as Senate Bill number 3480, and is supported by several leading Democratic Senators.

However, another and opposing Farm Credit bill has been introduced into Congress by Senator Wheeler, and Chairman of the Agricultural Committee in the House, Marvin Jones, which, it is claimed, if passed will destroy the Farm Credit system and service on its present basis. The Jones bill

would remove all cooperative features of Farm Credit system, and all farmer ownership and management. The System would be entirely government-owned and centrally controlled. An entirely new system of making loans would be set up, the government would carry all of the risks and all the expenses.

SLANT: The Grange, the Farm Bureau, and the National Cooperative Council are working for the passage of the Gillette Bill, Senate number 3480, which would restore the administration of Farm Credit to an independent, non-partisan Board. These farm organizations, also, are utterly opposed to the Jones bill. Nevertheless, Washington reports that the Jones bill has a good chance of passing. As *American Agriculturist* pointed out in last issue, if the Federal government succeeds in making Farm Credit an entirely government-owned and controlled corporation, some future Administration, in an effort to save money and balance the Budget, will take the government entirely out of Farm Credit. Where will farmers be then? They will lose a system that has rendered untold service to American farmers, a system which it has taken more than 20 years to build.

Those Census Questions

ANOTHER Senate Committee has backed up Senator Tobey (New Hampshire Republican) in his fight to get certain questions left out of census. Senate Commerce committee favorably reported his resolution to put Senate on record against income questions. However, a legislative jam may prevent action by Senate before April 1, date on which census is scheduled to begin. It is said that a vote taken after that date would not count.

Senator Tobey has argued repeatedly that census-takers might tattle to neighbors the income information they gathered, and that this data also might be used for political purposes.

One result of Senator Tobey's fight is that Secretary of Commerce Hopkins has issued instructions that citizens, if they wish, may hand written replies to income questions, in a sealed envelop, to census-takers. These will be mailed direct to Census Bureau in Washington.

Platform for Taxpayers

FROM A civic-minded and thoughtful group of men comes the following resolution on the tax situation:

TAXPAYERS' 1940 EMANCIPATION PROCLAMATION

"WHEREAS, government, whether it be that of a tiny hamlet, city, county, or that of the nation, has become necessary in the daily lives of each and every one of us, and

"WHEREAS, such government requires funds in order to function, and

"WHEREAS, such funds are provided from taxes out of the pockets of taxpayers, and

"WHEREAS, the ability of the government to collect these taxes is directly proportional to the sum total of the abilities of taxpayers to pay, and

"WHEREAS, the ability to pay is less today because of a variety of circum-

stances, some of them beyond our control, now

"BE IT PROCLAIMED, that in the interest of continuing the really necessary and vital phases of government, there be immediate, intelligent and fearless retrenchment in government spending, and

"BE IT FURTHER PROCLAIMED, that every taxpayer demand such retrenchment, and

"BE IT FURTHER PROCLAIMED, that each and every such taxpayer support wholeheartedly those government representatives who honestly and fearlessly strive toward this objective, even in the face of pressure groups intent on saving their own favored activities, and

"BE IT FURTHER PROCLAIMED, that the yardstick to be applied to each and every activity in determining the degree of retrenchment to be made, shall be 'Is this absolutely necessary to the well-being of the citizen?'

SLANT: In attacking the problems of reckless government spending and high taxes, it is only fair for each and every taxpayer to ask himself which comes first, the cart or the horse. In other words, is government solely responsible for high taxes, or are the people to blame for continually demanding more and more services, subsidies, benefit payments, etc? Part of any tax program must be a determination on the part of citizens to expect less from the government and to do more for themselves.

For Purer Politics

POLITICIANS got a fearful jolt last week when Senate voted 2 to 1 in favor of new Hatch bill, which seeks to curb political activities of State employees drawing Federal pay. Original Hatch act, passed last year, forbids Federal jobholders, except "policy-making" ones, to do any electioneering. New Hatch bill, which also provides that no one may contribute more than \$5,000 to a political campaign, now goes to House, where it is said that it will have a harder time getting passed than a camel squeezing through the eye of a needle.

Original Hatch act was passed largely as result of charges that WPA workers in some States, particularly Kentucky and Pennsylvania in 1938, were forced to vote for New Dealers and to give money to political campaigns. Idea back of bill was to prevent building up a national political machine with Federal funds granted for various loans, subsidies, and direct relief.

In the main, Republicans are supporting the measure, and Democrats opposing it.

SLANT: Here is a bill that this country needs. Today there is more danger than ever before of Federal funds being used to perpetuate the power of the party in office.

The Town That Couldn't Be Licked

WARE, MASS., is a little town of about 7,700 people. Half of the town's workers suddenly found themselves out of a job twenty-eight months ago when Ware's major industry, a cotton textile mill, closed up and moved South with all its machinery. All efforts to get some large concern to come and take its place failed.

Then the town got busy. Finding that the vacant cotton mill could be bought for \$50,000, a "Save Ware" mass meeting was held, at which the townspeople decided to buy the property and organize Ware Industries, Inc. Clerks, waitresses, policemen, day laborers, teachers, merchants—they all chipped in and took the \$5 shares, and \$50,000 was raised in two weeks.

Diversified industries from outside were persuaded to locate in the old mill, which the town repaired and put in shape with money borrowed from the bank.

Today, seventeen concerns make the old mill hum. Hats are made there, as well as shoes, dresses, and products of metal, woodworking and textile trades. Ware Industries, Inc., has paid its debts, taxes, and employs two and a half times as many workers as the old cotton mill did. Across the front of the main building is a sign. It says "Ware, the Town that Can't Be Licked."

SLANT: We like this story, and we think that the folks who hustled around and found a way out are happier than if many of them took the easy way and went on relief.

Fewer Farm Bankruptcies

LAST YEAR saw smallest number of farm bankruptcies in twenty years, according to figures given out by U. S. Dep't. of Agriculture this month. Failures were 21 per cent below those for 1938, and down 82 per cent from peak of 7,872 recorded in 1925.

Interesting also is fact that while all occupational groups suffered fewer bankruptcies last year than year before, the percentage drop for farm group was largest.

State Advertising Sells Farm Products

INTERESTING survey just completed this month by a Pacific Coast advertising firm shows results of advertising of farm products by various States. Nine states already have laws permitting state advertising; several others have laws pending.

Here in Northeast, Maine pushes its potatoes, sweet corn, blueberries, lobsters, and scallops. New York boosts its maple syrup, milk, apples, corn, onions, potatoes, tomatoes, and ducklings. New Jersey tells the world about its milk, eggs, apples, asparagus, blueberries, and potatoes.

Idaho advertises its potatoes and onions; Washington, its apples (and soon dairy products); California, prunes, pears, peaches and wine; Florida, its citrus fruits.

Money to finance various state advertising programs is raised in different ways. Survey finds that Washington, Idaho, and Florida levy assessments per unit of production. In New York this is true for milk, and in Maine for potatoes. For farm products other than milk, New York made lump sum appropriation. Maine did this for boosting of its fishery products and farm products other than potatoes. Wisconsin did same thing for its cheese.

New Jersey authorized secretary of agriculture to receive money for advertising purposes either as contributions from producers or as proceeds from sale of labels. In Florida all assessments on grapefruit which goes into cans are spent for advertising such canned grapefruit. In California, prune and wine advertising is carried on by the state under an enabling act through which growers, by a petition signed by producers of a majority of the tonnage, may vote an advertising assessment upon themselves.

DOES IT PAY?

Answering question, "Does it pay?", survey concludes that most state-financed advertising campaigns have paid out. It quotes Florida Citrus Commission as figuring each dollar invested has brought \$17 in sales in-

crease. In Maine, it helped potato growers to find new markets and stabilize prices. In Idaho, increase in average price per bushel received by potato producers in 1938 over 1937 was 60% more than increase throughout the country, according to survey. New York State's milk advertising campaign has meant, over a period of 5 years, an increase of millions of dollars for New York State dairymen.

■ To Put Lard In the Larder

WALTER H. LLOYD, editor of that good farm paper, The Ohio Farmer, in describing the new farmers' organization called the American Pork Producers, Associated, said:

"Up in Chicago a new farm organization was launched. This is a self-help organization. Its officers are not going to establish a lobby in Washington for congressional subsidies for agriculture. They are not going to seek changes in the tax laws nor ask for special favors of any kind. This organization, therefore, has few counterparts in agriculture at the moment, but probably will as the years roll by. Objectives of the organization are:

1. To sponsor production of a superior grade of good old-fashioned hog lard, packaged in an improved container under the name of *pure lard shortening*, plainly marked with a distinctive seal of merit granted only to a standardized high quality product.
2. To effect the restoration of pure lard shortening to its proportionate place in both household and commercial use.
3. To promote the year-round use of pork in the American diet.
4. To put more ham and bacon on the American breakfast table.
5. To insure the maintenance of this organization always as definitely a producers' organization, financed by the producers and with its control and management in the hands of the producers.
6. To enlist the cooperation and participation of all interested groups and organizations."

The leaders of this organization are sound, level-headed men and deserve the support of all commercial hog producers.

■ Northeast a Great Vegetable Section

"The number of acres devoted to vegetables in the State of New York has increased 45 per cent in the past 35 years."
—Uncle Ab.

SLANT: This percentage of increase is probably not far wrong for the whole Northeast, which means that vegetables are second only to milk and poultry in this section as a farm enterprise. In recent years rapid transportation and refrigeration have increased the competition to Northeastern growers from the South, but now quick freezing, which uses northeastern vegetables and can extend their season the year round, may help to offset competition from other sections. Growers will be wise not to increase further until consumer demand increases.

■ Milk Did the Trick

Two cages of white rats have done a lot of traveling since last summer. With their owners, Ralph Juhl and Arland Thielking, of Bremer County, Iowa, they went to Iowa State Fair last fall, then to Dairy Cattle Congress in Waterloo, and later to San Francisco World's Fair and National Dairy Show. The rats' job was to demonstrate the importance of milk in the diet. Those in one cage were the "under-privileged" kind—skinny, no pep, one with a twisted neck, one going blind, all of them a sad sight to see. Those in the other cage were healthy, lively, and increased their weight five times in three months. Rats in both cages had been fed oat-

FAMILY HARVEST "WEIGHS OUT" IN ... BETTER LIVING

When you catch the first handful of grain from your own ALL-CROP HARVESTER ... something tells you Better Living has come to stay. You know by the feel that the plump, stalk-ripened kernels will weigh out heavier. Look at a sample of last year's crop—weather-stained in the shock, musty. It reminds you of the grief you had with your binder in down grain ... the dust, chaff, backaches ... stacks of dishes facing Mother.

This year—you've worked a miracle with your All-Crop Harvester! Your grain is safe in the bin. Nearly enough more bushels to pay the cost of harvesting! Air-Blast Separation and the Close-Cutting Header did it. The Wide Bar Cylinder and Over-Size Threshing Rear kept you ahead of "big combines." With Variable Speed V-Belt Drives, you made simple in-the-field adjustments for legumes, grasses, sorghums as well as grains. And your cost was 10 cents less on every bushel. Bushels that "weighed out" in terms of Better Living!

NEW 1940

meal by their owners—but with this difference. Sickly ones got just oatmeal and water. Healthy ones had oatmeal and whole milk. **SLANT:** What's good for rats in this case is good for humans. Every one who cares about his health should drink more milk!

Good Books to Read

MAKING THE BIBLE LIVE, Georgia L. Chamberlin. Rich and human stories lie behind the great religious writings of the Old Testament, but to the average reader they are often shrouded in legend and mysticism. In this book the author has presented each prophet as a human being rising to meet the political and social crises of his day. A valuable aid to parents and teachers in introducing the Bible to young people.—*University of Chicago Press*. \$3.00.

Good Movies to See

YOUNG TOM EDISON. The inspiring, human story of the adventures of a boy who did not fit into the common mold because of his curiosity and spark of genius. Mickey Rooney.

By J. F. (DOC.) ROBERTS

LIVESTOCK men, from present ex-
perience anyway, cannot be en-
thusiastic about *trade pacts*. Appar-
ently Canada was not satisfied with
a prohibitive 30-day quarantine on
our live hogs. On February 27th, they
put a new import quota on our pork
products, setting the amount at one
million, six hundred pounds per month.
Yet, with a ruinous live hog price, we
shipped four million, eight hundred
thousand pounds of pork into Canada
in December; nine million, seven hun-
dred pounds in January; and February
shipments exceeded those of January.
In other words, they cut our outlet for
pork products between 75% and 90%,
just when we need it, and we never did
need their 754,000 cattle and calves
they shipped in here in 1939, or the
424,000 they shipped in 1938. Please
note the increase in 1939 over 1938.

WOOL—Inasmuch as we are a wool-
importing country, our wool price al-
ways advances when the world price
advances, except this year. Since Jan-
uary 1st, all foreign markets have been
strengthening, and yet they are trying
to tell us our wool is worth less, in
spite of the fact that the available sup-
ply of apparel wool in this country on
February 1st was 27% smaller than
the five year average. This condition,
ordinarily, would make for a scramble
for wool, and it will this season if our
growers do not break their own mar-
ket. Perhaps it would be interesting
for you to know that import duty on
rags has been cut the maximum allow-
ed by law, and yet we have enough
re-worked wool and rags in this coun-
try to have an effect on our virgin wool
price.

Horses that have been run outside
this winter, in the Northeast, have had
an unusually severe cold and deep-
snow winter to contend with. Some
people say the worst in 37 years. Our
horses have not done as well this year
because they could not forage for them-
selves to any great extent, but fortu-
nately we did have some big stacks of
hay and they have gotten along with
this hay and no grain unusually well,
considering conditions. This particular-
ly brings out the fact that you should

E. A. WEEKS, LOCKE, N. Y.

be protected against such a winter
when making your plans to run live-
stock outdoors; and also that it should
not discourage the idea of keeping
livestock out just as much as possible.
The fed lambs in northwestern New
York, which have been fed in the open
with shelter and a dry place to lie
down, have almost without exception
made better gains and more desirable
market lambs than the lambs which
have been fed in close, or in tight
barns.

Business and industrial conditions
have not been good since the first of
the year and our livestock prices have
reflected this unsatisfactory situation,
with the exception of lambs. There ap-
parently has been no great improve-
ment due to war orders or war condi-
tions, and whether the activity through
the fall and early winter produced all
we could handle or not is an open ques-
tion. Livestock projects and expansion
for this summer and next winter should
very seriously take into account, and
watch developments in business and
industry; and unless they show a very
decided improvement over their present
condition, any expansion of farm crops
or livestock should not be undertaken.

With AMERICAN AGRICULTURIST Advertisers

A Portable Loading Platform

A movable loading platform constructed by a dealer in farm supplies. Here is an idea which would be helpful on many farms. In spite of snow, this JOHN DEERE Model H. tractor, equipped with GOODYEAR Sure-Grips, easily moves the platform from place to place.

GRASS SILAGE PRESSURE

There has been some difference of opinion about the pressure which grass silage exerts on a silo. Some have claimed that the pressure of grass silage is much greater than corn silage, and others have maintained that there is no difference. Now the U. S. Department of Agriculture reports the results of some tests made in cooperation with the New Jersey Experiment Station and the Bureau of Dairy Industry at Beltsville, Maryland. The tests show that grass silage does exert more pressure on silo walls, and therefore that, in the case of stave silos, hoops should be put more closely together. A chart showing the method of figuring out the needed reinforcement is available for 12c (the cost of mailing) from the NATIONAL ASSOCIATION OF SILO MANUFACTURERS, Box 30, Norwich, N. Y.

BUYER'S GUIDE

The "1940 Massey Harris Buyers' Guide" is a 40-page catalog of farm equipment also containing much interesting and valuable information for any farm operator. For example, there is a story about hybrid corn—a matter which is of intense interest to all dairymen.

MORE HOUSES IN 1940

THE RUBBEROID COMPANY, 500 Fifth Avenue, New York City, predicts that sales of materials for private homes in the United States during 1940 will be 9 per cent greater than they were in 1939. The prediction is a result of a survey of opinion among distributors of building supplies in 41 states. The most optimistic reports were received from New England, the Middle Atlantic States (made up of New York, New Jersey and Pennsylvania), the East North Central States, and the West South Central States.

FIGHTING DROUGHT DAMAGE

Last summer's dry weather, in many areas in New York, New Jersey, and northern Pennsylvania, brought many problems—some of which still remain unsolved. For example, there is the big question of this summer's hay crop. From the G.L.F. EXCHANGE, INC., Ithaca, New York, a folder is available without cost called "X Marks the Spot to Fight Drouth Damage."

29-3 CORN

The production of double-crossed hybrid seed corn is a painstaking process but a worthwhile one because hybrids developed for a particular area generally out-yield open-pollinated varieties. Corn is one of our most adaptable crops, and can be grown in areas of widely differing climatic conditions. But to take full advantage of these conditions, corn needs to be bred for a particular area. 29-3 double-crossed corn has been developed

as a silage corn in most areas in New York. It has also proved excellent in northern New England.

It seems certain that many growers of silage corn will have the opportunity to buy double-crossed seed corn developed in Corn Belt states. 29-3 is not recommended for Corn Belt states because it will not take full advantage of the long growing season there. Neither, in general, are Corn Belt hybrids adapted to the shorter growing season in the Northeast.

SHEEP SHEARING

Many northeastern farmers are becoming interested in raising sheep. "Harvesting the Farm Flock Wool Crop" is the title of a new booklet available without cost from the CHICAGO FLEXIBLE SHAFT COMPANY, 5664 Roosevelt Road, Chicago, Illinois.

PLENTY OF NITROGEN

There was a time when the experts predicted that population would outrun food supply and that hunger would be a chronic guest at every man's table. That was before our chemists discovered ways of increasing our supply of nitrogen for fertilizer and before experts ever heard of sulphate of ammonia. If you would like to know more about this thrilling story, drop a post card to U. S. PRODUCERS OF BY-PRODUCT AMMONIA, 50 West Broad St., Columbus, Ohio, and ask for a copy of "Plant Food from Coal."

USE MORE MILK

Increased milk consumption on the farm is quite as important as in the city. First, there is the question of cost. If milk at city prices is a good food, it is an exceedingly cheap food for families on the farm and should be used to the limit. In the second place, there is the question of health. A post card to the BUREAU OF MILK PUBLICITY, Department KK-1, Albany, New York, will bring the booklet "Milk—The Way to Health and Beauty."

ORDER CHICKS EARLY

Order your baby chicks now and specify the date you want them delivered. You will be far more likely to get them when you want them than you will if you wait. When hatches are poor or when more orders come in than eggs have been set, a hatchery cannot be expected to fill orders promptly. Naturally, the poultryman who orders early gets first preference. There is no better buyers' guide for the purchaser of baby chicks than the advertising columns of *American Agriculturist*.

When writing advertisers be sure to say that you saw it in THE AMERICAN AGRICULTURIST.

NEARBY MARKETS for NEARBY POULTRYMEN

Egg Market Notes By J. C. HUTTAR

SUPPLY: Hens all over the country seem to have recovered from the winter slump in production. I would say that we are in the flush of the Spring egg lay. The big increase in the last two weeks has been in the Mid-west, which had probably been hit the hardest by the January and February slump.

DEMAND: At this time of the year eggs are used in three ways: daily food, hatching, storage.

The demand for daily table and cooking use, which we speak of as consumption, has been good lately. At least it has been heavier than last year. Part of this year's consumption is represented by eggs given away by the Federal Government. There were no government purchases and free distribution at this time a year ago. Taking out the free eggs, folks aren't eating quite as many as they did at this time last year.

J. C. Huttar

We are now (as I write this) in Easter Week. Easter is usually an egg-eating holiday. But most every year the Hebrew Passover comes just about at the same time as Easter. This year, however, the Passover comes a month after Easter. So we can't compare the Easter demand this year with that of any recent previous year.

Taking this first part of "demand", then, we have to say that it is not too good. Why this should be, I don't know. Folks have just as much money as a year earlier and retail prices are lower.

HATCHING: So far the government's figures show that hatching is 25 to 30% below last year. So this demand for hatching eggs is also lower than last year.

STORAGE: Probably the biggest weakness in the present price situation is that the demand for storage is almost out.

When there is a surplus of production over consumption it is the willingness of speculators and storers of eggs to store heavily or lightly that makes the fresh egg market firm or weak.

A lot of the people who have financed storage eggs in the past lost so heavily last year on the deal that they either don't have any money or they are very cautious about this year's price. They are waiting until they feel sure eggs will go no lower. Then, if they think they are cheap enough so that there is little risk in storage they will probably begin to buy heavily. Otherwise they will just store a few eggs so as to keep their hands in the business and have a few for the steady customers next fall.

In the meantime the government figures will keep coming out and showing fewer eggs in the warehouses of the country than a year ago and probably less than the past five years' average. This should have a strengthening effect on prices through the latter part of the spring and the summer.

So here we are, right where Editor Ed Eastman so well said we were. We're producing more eggs than folks want to eat at prices which will make the chicken business worth while. Or to put it another way, folks aren't eating as many eggs as they should. Ed gave us the answer to this prob-

lem. Now, all you've got to do is to decide whether you belong in or out of the poultry business. If you belong out, this is a good time to get out. If you belong in, do your part in making eggs more popular with consumers.

Keep your eyes and ears open and drop any attitude you may have about "letting George do it."

Them's strong words but I means them.

Government Egg Buying

In spite of very heavy purchases (over 100,000 cases of eggs in New York and Chicago in the last three weeks) the Federal Surplus Commodities Corporation had to let market prices slide down just a little.

I know that this government agency would like to hold prices at the present or even slightly higher levels. This is not practical, however, when the volume of purchases becomes so great that ordinary trade channels are affected by lack of customers. Naturally when eggs are distributed free to folks on Relief Rolls they don't buy them in the stores.

I do believe, however, that every effort will be made to keep prices from dropping much lower.

If it were not for government support prices would now be several cents a dozen lower. That's my opinion.

Another way that government buying is affecting Northeastern Producers who ship their eggs into large markets, such as New York, Boston, Philadelphia, etc., is that in the prices the regular trade is willing to pay for fine eggs. With the F.S.C.C. unwilling to pay higher than quoted price on Exchange Specials for eggs in New York many so-called Premium Marks are sacrificed at this price. It is becoming more and more difficult for wholesale receivers to pay premiums for these fine eggs to producers. This is especially true since private buyers are using the government buying price also as their basis for paying for these fine eggs.

The New York Mercantile Exchange even went so far as to put a higher grade on their trading list to care for these Premium Marks. But the Federal Government has not made any purchases here on that grade.

To be sure, they have made some small premium purchases at Cooperative Auctions, but these have been too small to affect the main buying and selling situation.

I am in hopes of getting the F.S.C.C. to modify this policy and make purchases of these finer eggs at a small differential over "Specials" to keep the premium payment for finer eggs (preferably on the basis of a definite grade).

... There I was, watching my hat and coat, when all of a sudden ...

Danger of Infection Among Baby Chicks

Success in raising baby chicks largely depends upon proper care and management. Readers are warned to exercise every sanitary precaution and beware of infection in the drinking water. Baby chicks must have a generous supply of pure water. Drinking vessels harbor germs. Drinking water often becomes infected with disease germs and may spread disease through your entire flock and cause the loss of half or two-thirds your hatch before you are aware. Don't wait until you lose half your chicks. Use preventive methods. Give Walko Tablets in all drinking water from the time chicks are out of the shell and you won't lose one where you have lost dozens.

Remarkable Success Raising Baby Chicks

"Dear Sir: I see reports of so many losing their little chicks, so thought I would tell my experience. I used to lose a great many of the little downy fellows from bowel troubles, tried many remedies and was about discouraged. As a last resort I tried Walko Tablets. I used two 50c boxes, raised 300 White Wyandottes and never lost one or had one sick after using the Tablets and my chickens were larger and healthier than ever before."—Mrs. C. M. Bradshaw, Diagonal, Iowa.

You Run No Risk

Buy a package of Walko Tablets today at your druggist or poultry supply dealer. Give them in all drinking water from the time chicks are out of the shell. Satisfy yourself as have thousands of others who depend on Walko Tablets year after year in raising their little chicks. You buy Walko Tablets entirely at our risk. We guarantee to refund your money promptly if you don't find them the greatest little chick saver you ever used. The Waterloo Savings Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee. Sent direct postpaid if your dealer can not supply you. Price 50c and \$1.00.

WALKER REMEDY COMPANY
Dept. 404 Waterloo, Iowa.

Spring Poultry Gossip

All-Night Lights for Chicks

Some poultrymen use a small 7½ watt red bulb at the top of each brooder house and leave this light on all night. Such a bulb will give a dim glow and seems to help prevent chicks from crowding by enabling them to move around and get closer to the stove if they need more heat. Such a light does not allow much eating or drinking, although some chicks will eat a little. Some authorities, at least, feel that it is not necessary to provide sufficient light so that chicks will eat during the night.

The story is a bit different where broilers are grown. By using a 25 watt lamp, the chicks will eat more or less throughout the night which, according to tests, will help them to put on weight faster.

* * *

Poultry Pastures

Ten years ago the term poultry pasture was unknown, and anyone who suggested turning hens out to pasture would have been considered slightly "off". Experience has shown that hens do eat tender grass and clover, and one poultryman reports a saving of about 20c a pullet by providing them with a first-class range.

It is generally admitted that 500 birds to the acre are all that a range can stand, and when we speak of an acre, we mean an acre of grass and not an acre of ground. A poultry range can be fertilized and improved quite as readily as a cow pasture.

Limiting the birds to 500 per acre will allow the grass to grow. In addition to the feed the birds pick up, a good range encourages them to cover a lot of ground rather than to congregate on one spot, causing the ground to get bare and making conditions favorable for the spread of coccidiosis.

* * *

Scratch Feed

When the question of making changes in scratch feed comes up, it is worth while to know the characteristics of grains. Wheat is palatable to poultry, but it can be replaced in the scratch grain by cracked corn or by whole corn if the birds are accustomed to it gradually. Oats can be replaced by good heavy barley, although it is becoming generally recognized that oats contain something which seems to lessen the tendency to cannibalism. Furthermore, barley contains less manganese than oats, and research has shown that manganese is an important element in preventing perosis, commonly known as slipped tendons. Yellow corn has the highest vitamin A content of any of the grains commonly used in scratch feeds.

R. T. Parkhurst of the Massachusetts College of Agriculture rates the grains as follows for growth of young stock: oats, corn, wheat, and barley. For egg production, they rate as follows: corn, barley, wheat, and oats; while for their effect on hatchability, the rating is: wheat, corn, barley, and oats.

* * *

Preventing Coccidiosis

Poultrymen who are able to raise a bunch of pullets without trouble from coccidiosis are either lucky or mighty good managers. This is particularly true during a period of rainy, cloudy weather.

Experience has shown that keeping the brooder house dry by proper venti-

(Continued on Page 19)

Would You Find Fault With a

BIGGER BANK BALANCE?

● Good chick starter is a money maker and modern formulas deserve to be called "good" for many reasons. Not the least of these is their usual content of high grade dry skim milk.

Body weight, feed consumption and feed efficiency increase with increasing amounts of dry skim milk in all-mash rations fed chicks during the first 10 weeks. Concrete evidence is shown in these charts based on recent extensive investigations at a leading experiment station.

Greater gain in weight and particularly the greater gain per pound of feed consumed means more profit for the poultryman. Using ample amounts of dry skim milk pays all along the line. There is no substitute for dry skim milk results in starting chicks profitably. It helps you build a bigger bank balance.

Be sure that your dealer supplies you with chick mash containing dry skim milk. If you mix your own mashes, send for Bulletin 210 (E).

The Folks on Poor Soil

(Continued from Page 5)

take out the R.F.D. service as it is to remove the opportunity for getting electrification. We should continue to build up the fertility of the land in the better lands of Class II through the agricultural conservation program, with its help in the distribution of lime and superphosphate and better seed.

If soil conservation work is justified to control soil erosion on Class III land, it is also justified on at least some of Class II, if you remember all the time that the problem of this land and the economic welfare and happiness of its people will be with us for at least 150 years more.

As the complexities and difficulties of farming have increased, particularly from the marketing end, the problems of the people who live on poor lands have increased, and some of our laws and regulations, designed to help farmers, may have injured instead of helping farmers on poor land. Instead of continuing to pour in so much from public funds, I suggest a diversion of some of these funds to find out a few things on the spot. For example, if the thousands of people who live on Class II land must stay there, they are as much entitled to good roads, schools, electric and other public services as those who live on better land. For example, we know that these hill lands could be made to grow good grass on considerable areas; we know that grass is the basis of much of our sustenance. We know also that these hills will produce a hundred times more grass than some of the ranch country. We have abused this great resource of grass by a one-crop milk producing industry, but with some research it can be brought back. How do we know that livestock other than dairy cattle would not be the answer? What about sheep and beef cattle on our thousand hills? We certainly don't want to wake up after twenty years of agricultural conservation program of lime and phosphate to find 20,000 more dairy cows in New York.

What would England and Germany give now for a million acres of grassland on which to feed beef cattle! I know a boy who put 12 beef cows on a rocky back pasture, and took out 12 calves in the fall worth \$600. Six hundred dollars is a lot of money on Class II land!

Yes, I think that some Class II land still has farming and living possibilities, and I am sure for the sake of the folks who live on it that we have got to find out what these possibilities are.

SEND FOR THESE EGG RECIPES

Our new Home Service Bulletin No. 9, entitled, "Tempting Ways to Serve Eggs", contains five pages of tested egg recipes by our Home Editor, Mrs. Grace Watkins Hockett. It is filled with excellent suggestions for serving eggs as the "main dish" at breakfast, dinner, or supper; also, egg salads and desserts are included. To get a copy of this free bulletin, simply write to American Agriculturist, Box 367-H, Ithaca, N. Y., and enclose three cents to cover mailing and mimeographing costs.

FULL OF FIGHT

Every Kerr Chick is a lively chick. They get their pep and vigor from their careful, selective breeding... a 32-year-old program that has brought out the finest egg-laying traits. Scientifically blood-tested... more than 120,000 breeders culled and banded each year. 240-acre breeding farm.

Canobie Poultry Farm,
GEORGE W. HIGGINS, R. 1, SALEM DEPOT, N. H.

(Continued from Page 17)

lation, control of drippings from drinking fountains, and replacing litter when necessary are the important steps. If chicks are to be raised in confinement, this program must be continued; but if they are grown on range, it is important to put them in a field where no poultry has ranged for at least two years. Here again, moving the brooder houses or shelters before the ground gets bare is an important step in keeping trouble from this disease at a minimum.

If, in spite of these precautions, coccidiosis appears, the standard treatment is to use a flushing mash containing a high percentage of milk. Such a mash can be made by feeding the usual mash and adding about 50 per cent of dried skim milk, or most companies manufacturing poultry rations now have a ready-mixed flushing mash available.

A common program is to replace feed, both mash and grain, by flushing mash for three days, providing plenty of drinking water and replacing the litter as often as necessary to keep the house dry. Then the young stock is put back on regular feed for four or five days, and then fed the flushing mash for another three days.

Coccidiosis usually appears when the chicks are from six to twelve weeks old, although it may give trouble before or after that period.

Grange Cleanings

(Continued from Page 2)

half century he has missed only eight meetings of his Grange and for 41 years continuously served it as gate keeper. Portland Grange was the second subordinate organized in the Empire State, less than two years after Fredonia, No. 1, had its start.

* * *

WALWORTH Grange in Wayne County, N. Y., recently celebrated a noteworthy anniversary. It was organized in 1875 and has had a continuous and successful existence. An appropriate day's program was carried out and the guest speaker was Rev. R. C. Root of Auburn, Chaplain of the New York State Grange.

"Here is my three-year-old daughter and some of our hens. If she keeps on, she will be a farm girl all right."
John Harshaw, Chenango Forks, N. Y.

WENE EXTRA PROFIT CHICKS

ELMER H. WENE

DRASTIC PRICE REDUCTIONS ON CHICKS OF SUPER-QUALITY!

Year by year, WENE quality advances steadily, impelled by our rigid Breeder-Selection Program, reinforced by double testing. Yet giant-scale production, 6,000,000 in 1939, makes possible sensational price slashes, especially on Super and Super-X Matings.

EIGHTH ★ AMERICAN AGRICULTURIST ★ GRANGE ★ CONTEST

SUGAR COOKIE

Contest for
GRANGERS

By MABEL HEBEL

EVER SINCE 1933, *American Agriculturist* and the New York State Grange have been holding baking contests together (except for one year when we made it a canning contest). During those seven years, Grange women have demonstrated their ability to make prize-winning bread, soft rolled molasses cookies, butter cake, doughnuts, and gingerbread. And now we've decided to give them a chance to show what they can do with sugar cookies, that mainstay of the farm cookie jar. Unless we miss our guess, the next several months will show some cookie exhibits at Grange meetings which will tempt members to help themselves!

These annual contests have a two-fold purpose: First, to stimulate interest in better home baking; and, second, to add an interesting event to Grange programs—one that will provide not only fun and human interest and educational value, but also (this is especially important to the men folks) some extra special refreshments. Do you remember how good that homemade bread tasted last year, particularly when it was served with homemade butter and strawberries and cream?

The contest is open to every Grange woman (and man) in this State. The men have always contributed some of their baked goods to these contests, and sometimes have won over the women in Subordinate matches. However, no Grange brother, we are sorry to say, has ever reached the top. When they get as far as the Pomona contests, they usually fall by the wayside—but perhaps this year, they'll fool us. Anyway here's a challenge to them to show what they can produce in the way of prize-winning sugar cookies.

Instructions and Score Cards

In charge of the contest for the Grange will be State Chairman Mrs. Franklin Dillenbeck, of Little Falls, N. Y., assisted by chairmen of Pomona and Subordinate Grange Service and Hospitality committees. Complete instructions with score cards will be mailed by *American Agriculturist* to all Granges before April 1st. Since we do not have the addresses of Subordinate Grange Chairmen, this material will be addressed to Grange Secretaries, with the request that they pass it on immediately to Chairmen of Service and Hospitality committees. Any chairman who fails to receive her set by April 6th should get in touch at once with the Secretary of her Grange, or with the Cookie Contest Editor, *American Agriculturist*, Box 367, Ithaca, N. Y.

Instructions and score cards for Pomona chairmen will be sent direct to them.

As in previous years, there will be a series of three contests—local, county, and state. Subordinate Granges will hold theirs first, probably in April, May and June. First prize winners in these contests will then compete with each other in Pomona contests. In the final State contest, to be held next December during State Grange Session, county champion sugar cookie bakers will pit their skill against each other to see who wins

the title of State Champion, as well as a lot of valuable merchandise and cash prizes.

Prizes

Twenty cash prizes, totalling \$60.00, are again offered this year by *American Agriculturist* to State Contest winners. These prizes will be divided as follows:

First Prize	\$25.00
Second	10.00
Third	5.00
Fourth	3.00
Fifth	2.00
Sixth to Twentieth	1.00 each

In addition to these cash prizes, many attractive merchandise prizes will be awarded to both State and Pomona winners by *American Agriculturist* advertisers. These will be announced later and will be well worth winning. Last year over 800 prizes were given by commercial companies to county and state winners.

Mrs. F. M. Englehart of Milton, Saratoga County, who won the State bread contest last year, needed a truck to carry home her prizes. Besides her check for \$25.00 from *American Agriculturist*, her prizes included a coal and wood range from Kalamazoo Stove Company, an oven from Perfection Stove Company, sacks of flour and a can of molasses from G.L.F. Products, Inc., a butcher knife and can of meat salt from International Salt Company, cake flour and "Best Flour" from Pillsbury Flour Mills and a sack of flour from Russell-Miller Milling Company.

Contest Rules

The rules are simple. Here they are:

RULE 1. Contest is open to every Grange woman (and man) in New York State, who is not a professional baker. Each contestant is entitled to enter 6 rolled sugar cookies.

Cookies have a way of disappearing fast when there are children around!

RULE 2. Each contestant must fill out the Cookie Contest Score Card. Chairmen of Grange Service and Hospitality Committees will soon have these to distribute. In filling out the score card, be sure to answer plainly all questions on it, sign your name, address, grange and county. Your score card must accompany your entry of cookies, as no entry will be accepted unless there is a properly filled out score card with it.

RULE 3. Before making your cookies for the contest, study carefully the score card, as it tells on what points judges will score entries. We are not suggesting any special recipe to be followed, as we want contestants to use their own.

As soon as the contest is announced in your Grange, get a score card from your Grange chairman of service and hospitality committee, and plan to take part. Names of first prize winners in Subordinate contests, as well as in Pomona contests, will be printed in *American Agriculturist*. Watch coming issues for these names, as well as for list of merchandise prizes to be donated by commercial companies.

Last year, about 3000 Grangers took part in our bread contest. Let's make the cookie contest even bigger. Even if you have never made a rolled sugar cookie, now is a good time to begin. In former contests, some of the first prize winners have been beginners. So we hope that every Grange woman will join the fun.

Many of the Granges are planning to have a home economics expert give a short talk after the judging is over on the making of rolled sugar cookies. Every Grange woman, whether or not she takes part in the contest, will be interested in hearing what a trained person has to say on the art of cookie making.

PEACE PLEA

By Emily Estey.

Dear Lord, what do mothers do
When the shelling nears?
Do they hold their children close,
Praying Some One hears?
Or do they go about their work
And sing to hide their fears?
How can any woman rest
With a gun in view?
They may tell me I had best
Leave it up to You—
But, Jesus, would I pass the test
Men put mothers through?

“Mix or Match”
COSTUMES

MUCH IS SAID this year about “scrambling” your costume. Jack-ets, skirts and blouses offer infinite variety for mixing and matching for any time of day, evening not excluded.

WITH WOMAN’S THREE-PIECE ENSEMBLE PATTERN No. 3152, the matron can mix or match her ensemble, in whatever materials and colors she wishes, to fit the needs of her own particular wardrobe. Either navy or black with light colors for contrast would fit right into the fashion picture. Sizes 14 to 46. Size 36 requires 1½ yards of 35-inch material for short sleeved blouse and sash; 3¾ yards 39-inch for bolero and skirt.

FOR THE YOUNG GIRL’S SPRING ENSEMBLE No. 2505, provides a bolero, blouse and skirt. She could get her variety by having several different blouses. Sizes 4 to 12. Size 8 requires 1¾ yards of 39-inch material for blouse; 1½ yards 39-inch for skirt and bolero.

TO ORDER: Write name, address,

pattern size and number clearly and enclose 15c in stamps. Address Pattern Dept., *American Agriculturist*, 10 North Cherry St., Poughkeepsie, N. Y. Add 12c for a copy of our new spring fashion catalog.

Something Different

AN attractive ornament to wear on your party dress, or to give someone is made in the shape of a butterfly from millinery velvet or cloth of gold. Instructions for making it have been sent in by Miss Winifred N. Wilson. If you are fairly clever with your fingers, you will find it an easy matter to make your own pattern from the photograph and to follow Miss Wilson’s directions:

“First make a paper pattern of a butterfly with a wingspread of about 3½ inches. Place this on your goods and draw around it with dressmakers’ chalk. As this will easily rub off, sew around on the chalk-line with basting stitches of fine thread. Across the front wings sew very fine hat wire, bending it in the center to fit the wing curves.

“With contrasting floss, button-hole all around the butterfly and in outline stitch indicate where front and back wings meet. Draw spots on the wings with chalk and embroider them in satin stitch.

“Cut out the butterfly. Take a pipe cleaner (white ones may be dyed any shade desired) and fold it in two. Sew this on to the velvet to simulate a body and bend back the ends a little way to look like feelers. Sew a gold safety-pin on the back. If, instead, a hair-pin is sewed on back, the ornament may be used to wear in the hair.”

Today in
Aunt Janet’s Garden

Height and Form Are Important

AT CORNELL Farm and Home Week I listened to a splendid talk on “Succession of Bloom in the Garden.” Here are some of the helpful things which the speaker said:

Don’t over-emphasize bloom, because in doing so we are apt to neglect fundamental principles of gardening which, if followed, will result automatically in a good variety of bloom. The speaker showed a colored slide of a garden which had plenty of flowers in bloom, but plants were poorly spaced. So, said he, organize your plant material as to height and form—the low plants, of course, in front; the higher ones in back. Vertical plants, having strong up-and-down lines, are the stimulating “ohs” and “ahs” of the garden, and therefore should be placed strategically. Delphiniums, hollyhocks and foxgloves belong in this group.

“I think I’ll surprise my husband and cook dinner tonight, Jeeves. Where is the kitchen?”

The horizontal and rounded forms should form the bulk of the garden because they are quieter in emotional effect. The flat-topped Sweet William and rock garden plants or the billowy baby’s breath, peonies and in fact the majority of plants make up the horizontal group. If these principles are carried out, the natural result will be flowers throughout the season.

Then to prove his point, the speaker showed other slides of the following flowers which when planted properly according to height and form will provide bloom from the beginning to the end of the growing season: Winter aconite, snowdrop, leucojum, crocus, scilla, chionodoxa, daffodils, single tulips, primroses, primula, bloodroot, hepatica, double tulips planted with pansies, forget-me-nots or pink primroses, gasplant with Siberian bugloss, tulips with wallflower, forget-me-not or bugloss and alpine rock cress, iris with oriental poppies, double buttercup, lupins with iris, geums, peonies, lilies, roses, hollyhocks with beebalm, day-lilies, meadowsweet, foxglove, phlox, mid and late summer, coreopsis, yellow meadowrue, buddleia, tritoma, goose-neck loosestrife, annual phlox and petunias, heliopsis, summer bulbs, such as tuberous begonias, bedding plants, fuchsia, geranium and impatiens, Japanese anemone, artemisia lactiflora, chrysanthemums and perennial asters.

He completed his story of color in the garden with a slide showing chrysanthemums in bloom on October 20th, a blaze of soul-satisfying color.

I forgot to say that the speaker began his talk by showing a vase filled with Christmas roses which he had gathered that morning underneath the snow. He explained that they had been protected by glass wool. Otherwise the blossoms would not have been perfect.

Favorite Recipes

By AUNT JANET

EGGS A LA KING make a grand supper dish for the family, or for a buffet supper, or lunch.

6 eggs hard cooked 1 to 1½ cups mushrooms
White sauce 1 tb. chopped pimento

WHITE SAUCE
4 tablespoons butter ½ teaspoon pepper
4 tablespoons flour ¼ teaspoon salt
1½ cups milk

To make white sauce, melt butter, add flour, salt and pepper, and stir until smooth. Add cold milk. Cook and stir constantly until thick. Remove from fire and place over hot water. Add chopped pimento and eggs cut lengthwise, and heat thoroughly. Reserve enough sections of egg for garnish, one section on top of each serving, giving each section a sprinkle of paprika to add color and flavor. Serve on toast or in patty shells.

Part of the mushroom stock may be substituted for some of the milk.

BAKED EGGS AND CHEESE is an easy supper dish. Into a shallow greased baking dish break the desired number of eggs, add a few tablespoons of cream and salt enough to season, (medium white sauce may be used instead) and sprinkle with a mixture of grated cheese and fine dry bread crumbs. Set dish in a pan of hot water and bake in moderate oven, 350° F., until eggs are set and crumbs are brown. Just before serving, add a dash of paprika.

APPETIZING WAY to use leftover bread is in bread pudding. An abundance of eggs in the mixture adds to the food value and the smoothness. If whites are beaten separately and folded in after the other ingredients are mixed, the pudding is much lighter.

2 cups dry crumbs ¾ cup sugar
1 quart milk 3 eggs
2 squares chocolate 1 teaspoon vanilla
(melted) ¼ teaspoon salt

Mix all together and add melted chocolate. Bake in moderate oven.

ADVISES
YOUNG
GIRLS ENTERING
WOMANHOOD

Thousands of young girls entering womanhood have found a “real friend” in Lydia E. Pinkham’s Vegetable Compound to help them go “smiling thru” restless, moody, nervous spells, and relieve cramps, headache, backache and embarrassing fainting spells due to female functional irregularities. Famous for over 60 years in helping “women’s” functional complaints. Try it!

Note: Pinkham’s Compound comes in either liquid or handy to carry tablet form (similar formula).

Is Your Rupture
HERE?

Why continue to suffer with rupture? Stop your worries and fears. Send for the facts about my perfected truss invention—the Brooks Appliance for reducible rupture—with the automatic AIR-CUSHION support that gives Nature a chance to close the opening. Thousands bought by doctors for themselves and patients.

Sent on Trial—Made-to-measure, individual fitting for man, woman or child. Low-priced, sanitary, durable. No obnoxious springs or hard pads; no metal girdle to rust. Safe and comfortable. Helps Nature get results. Not sold through stores—beware of imitations. Write today for full information sent free in plain sealed envelope.

Golden Wedding CONTEST WINNERS

IN OUR Nov. 25 issue, *American Agriculturist* announced a contest for couples who had been married fifty or more years, and we offered the following cash prizes: \$10 for picture of longest-married couple; \$5 for picture of next longest-married couple; and \$2 for every other picture we had room to print.

Before the contest closed on Dec. 31, we had heard from 54 couples, 21 of whom have been married between 60 and 70 years. Their record makes some of the 50-year married couples look like young folks! We wish we had space to print every one of the pictures and interesting letters we received, because they are an inspiration not only to young couples starting out together, but also to older married couples who may be finding the road rough. In many cases, the letters tell a simple story of pioneer farm background, of a lifetime spent in one community, of work done and children raised, of descendants even unto the fifth generation, and of blessings still being received. Some of these fine old people were born way back in the '40's and were just coming into young manhood and womanhood when the Civil War was being fought.

American Agriculturist salutes them all, and congratulates them on their successful marriages and their great good fortune in having their life partners with them through so many long years.

1. LONGEST-MARRIED COUPLE: Mr. and Mrs. George E. Barnes, Norwood, N. Y., partners for 70 years.

Our first prize goes to Mr. and Mrs. Barnes, who celebrated their 70th wedding anniversary on last Dec. 23rd. Their marriage took place on Dec. 23, 1869, four years after the close of the Civil War. Both were born on farms at Canton, N. Y., and for forty of the seventy years since their marriage, they lived on the home farm, later building a bungalow beside the farm home of their son, Vernon Barnes of Norwood, N. Y.

Mrs. Barnes is 89 years old, and Mr. Barnes, 90 years. They both enjoy fairly good health and do their own housework together and care for their own garden. Mrs. Barnes is a great lover of plants and has her windows filled with bloom. To newly married couples, they say: "A young couple starting out should buy nothing they can get along without, and the man should have more than one job or kind of work. . . . Long life and a happy marriage may be credited to being moderate in all things."

(EDITOR'S NOTE: As we go to press, we receive a letter from Mrs. Barnes, advising us that Mr. Barnes has just passed away. He was taken suddenly ill and died the next day. We deeply regret this sad news and are sorry that Mr. Barnes did not live to know that he and Mrs. Barnes were the winners in our contest.)

2. ANOTHER 70-YEAR PARTNERSHIP: Mr. and Mrs. Orbon Holmes, of Winthrop, N. Y., were married just one week after our first prize

winners, on Dec. 30, 1869. Mr. Holmes is 89, and Mrs. Holmes is 86. Mrs. Maude Ellison, who sent us the picture, writes:

"Orbon Holmes, the son of Hiram and Mary Nay Holmes, was one of 7 children. His father came to Winthrop from Vermont in the spring of 1838, built a log house and returned to Vermont for his family. He brought them all in an ox cart to their new home in the forest. The home of Mr. and Mrs. Holmes is one of the cheeriest ones in Winthrop. Both are mentally alert, with good memories, and they advise young couples to 'behave and live in peace, and they will have a happy life.' They are members of our Universalist Church here, and they live their religion."

3. HAVE 3 GREAT-GREAT GRANDCHILDREN:

Mr. and Mrs. Charles A. Prince of Cherry Creek, N. Y., celebrated their 69th wedding anniversary on last December 11, having been married on December 11, 1870. They have 5 children, 36 grandchildren, 45 great grandchildren, and 3 great-great grandchildren. Mr. and Mrs. Prince, both of whom are 91 years old, were born in Cattaraugus, N. Y., in log houses. In 1848, when Mr. Prince was only six weeks old, his family moved into a new frame house, where they imprinted their baby's feet in some fresh plaster. The house with its mark of the past still stands. The Princes still enjoy good health, and they say that they owe their long life and married happiness to having tried to follow the Golden Rule. They advise young married couples to learn to give and take.

4. HAVE ALWAYS FARMED IT: Mr. and Mrs. William King, Little Valley, N. Y., got married just 20 days after our third prize winners—Dec. 31, 1870. Mr. King is now 89 years old, and Mrs. King is 87. They live with their daughter, Mrs. Bertha Wulff. "We have always farmed it," says Mr. King. "We lived on one farm 41 years. A few years ago we sold it and moved to Little Valley with our daughter. We are well and can do quite a little work now. This picture of us was taken last summer."

5. "WORK IS NEARLY FINISHED": Mr. and Mrs. John F. Olin, Lyman, N. H., 67 years married. The Olins were married in Lakeport,

9. Mr. and Mrs. Henry M. Clark.

▲ Mr. and Mrs. Marlin R. Smith. 10.

N. H., on April 25, 1872. Mr. Olin, who will be 94 years next June, writes:

"I was raised a farmer; trade, iron melter. I have been a resident of Lyman, N. H., 51 years. I have served the town as Clerk, Treasurer, Auditor, Overseer of the Poor, Member of School Board, Trustee of Public Library, Farmer, Merchant, Postmaster, Justice of the Peace, Pastor of the Union Church for 15 years, and now I guess my work is nearly finished.

"You ask for a word of advice from us to stabilize young married people, and that word is *Love*, the greatest thing in the world. I have found nothing like it to keep people on the sunny side of life—true, clean love. Grapple to it with hooks of steel. The Lord bless you."

6. "BEAR AND FORBEAR": Mr. and Mrs. J. Wyman Goodell, of Swanzey, N. H., who were married 67 years ago last June, on June 10, 1872. Mr. Goodell is 93 and Mrs. Goodell, 85 years. With the exception of four years spent in Athol, Mass., they have lived their whole married life in Swanzey, N. H. They have had 10 children, seven of whom are living; 31 grandchildren, and 31 great-grandchildren. Mr. Goodell is the oldest citizen in Swanzey and has the Post cane seen in the picture. The Goodells live by themselves, and state that they are in fair health for people of their age. This picture was taken a year ago last summer. Their advice to young married people who wish to make a success of their marriage is to remember the two bears — bear and forbear. If both husband and wife practice this, they say, the marriage will almost certainly be enduring.

7. "CHOOSE THE RIGHT ONE": No. 7 among our longest-married couples is Mr. and Mrs. James Edwards of Gloversville, N. Y., who were married on July 25, 1872. On last July 25 they celebrated their 67th wedding anniversary, and also the 87th birthday of Mrs. Edwards. Forty-three relatives and friends gathered for the dinner and program, and presented them with a purse of money. Mr. Edwards is 90 years old, and both he and Mrs. Edwards are in fairly good health. Mrs. Edwards still does her own housework. They have 5 children living, and two dead. Their advice to young people

Mr. and Mrs. John Bayne. Mr. and Mrs. Frank Wykoff.

MARRIED ON SAME DATE: These two couples both celebrated their 64th wedding anniversary on last Dec. 8, having been married on Dec. 8, 1875. Mr. and Mrs. Bayne are in fair health and are living on the same farm that they went to on their wedding day. Mr. Bayne is 87, and Mrs. Bayne is 82. They say that their one piece of advice to young married couples is: "Pull together."

The Wykoffs were married in Canandaigua, N. Y., and have always lived on South Main Street there. Mr. Wykoff is 86, and Mrs. Wykoff is 81. The person who sent in their picture states that they have always been hard workers, and that their advice to young couples just starting wedded life is to work hard. Mr. Wykoff started the spoke factory at the foot of beautiful Canandaigua Lake in 1880, and operated it 50 years, averaging about 12 hours a day.

who are thinking of marriage is to be sure they have chosen the right one.

8. "AUNT RACHEL AND UNCLE JOHN T. DOWNS, JULY 1938", was the inscription on the back of this picture of Mr. and Mrs. Downs of Sound Ave., Riverhead, N. Y., who celebrated their 67th wedding anniversary on last Sept. 3 with a family gathering at one of their daughters. Mr. Downs is 90 years old, and Mrs. Downs is 83. They have 5 daughters, all married, 10 grandchildren, and 6 great-grandchildren. The Downs have always lived on a farm and Mr. Downs still works a good-sized garden. Mrs. Downs has woven hundreds of yards of carpet and has just finished a 50-yard piece. They attend church nearly every Sunday and have done so for over 70 years. Their advice to a newly married couple is: "Be willing to bear and forbear."

9. "ALWAYS PULL TOGETHER": Ninth are Mr. and Mrs. Henry M. Clark, who celebrated their 66th wedding anniversary last July 2. Mr. Clark is 88 years old, and Mrs. Clark will be 88 this month. They were married at Rensselaer Falls, N. Y., on July 2, 1873, and are the parents of 9 children, seven of whom are living. The last 55 years of their lives have been spent in the vicinity of Cranberry Lake, N. Y. This picture was taken on their 65th wedding anniversary, and the rustic chair in which they are sitting was made by a son who died in 1937 at the age of 61. The Clarks have 23 grandchildren and 14 great-grandchildren. Both are in quite good health and able to travel about and go visiting. They spent part of last fall with their oldest son in Providence, R. I., and have been spending the winter with daughters in the Mohawk Valley.

The Clarks' advice to young couples is: "No matter how heavy the load, always pull together."

10. ALL DESCENDANTS STILL LIVING: Mr. and Mrs. Marlin R. Smith of Bristol Springs, N. Y., who were married on Dec. 10, 1873 (66 years ago), have the rather unusual record of not only being long-lived themselves, but of having all of their descendants living. They have 8 children, 19 grandchildren, and 11 great-grandchildren. Mr. Smith is 86 and his wife is 85. They were married at Bristol Springs and have resided nearby on a farm through the 66 years of their married life. Their advice to young married couples is "to be willing to give in to each other, as they will have to do many times through life if they are to get along happily together."

11. HAVE ALWAYS TAKEN THE A.A.: Mr. and Mrs. A. D. Rockhill, of Moira, N. Y., celebrated their 65th wedding anniversary last Oct. 10. Mr. Rockhill is 89 years old, and Mrs. Rockhill is 84. They have had 6 children. A daughter, who sent in this picture, writes:

"Father and mother have always farmed it until the last few years, when they moved to Moira. They continue to live alone and to take care of themselves and do all their own work. They are very smart and never complain of being sick. They appreciate their long life and happy marriage, and their friends wish them many more happy years. They have always taken the *American Agriculturist* up until the last two years when they haven't been able to read as they used to."

11.
▼ Mr. and Mrs. A. D. Rockhill.

▲ SECOND PRIZE WINNERS: 2.
Mr. and Mrs. Orbon Holmes.

▲ Mr. and Mrs. J. Wyman Goodell.

▼ Mr. and Mrs. John F. Olin. 5.

The Lost Melodeon

By C. A. STEPHENS

NOTHING that ever occurred in our old school district caused a greater stir or started such dark suspicions as the disappearance of that melodeon from the schoolhouse.

It was a new melodeon, and a good one for those days—1867. We paid forty-five dollars for it in Portland, and raised the money all among ourselves, without help from the older folks at home.

Music at school was a new thing with us then. Not every teacher is musical. But Master Pearson, who taught that winter and for two winters afterward, was a singer. He loved music, and had the gift of creating an interest in it. During the first week of the term he opened and closed school by singing a hymn, assisted timidly at first by two or three of the larger girls.

Others soon began chiming in, however, inspired by the melody of the master's voice. Within a fortnight the whole school was singing, or trying to sing, and during the third week we raised the money and bought the melodeon.

We also purchased twenty-five copies of a singing book called "School Songs," and ever after that the old schoolhouse resounded morning, noon and night to our new vocal efforts.

Certain of the parents in the district were afraid that so much music was detrimental to other studies, and that a musical school master was likely to be good for little else; but that was hardly true of Master Pearson.

He was quite as keenly interested in arithmetic, geography and history. He hung the bare walls of the old schoolroom with large maps, charts and pictures. The room had never looked so attractive, and, indeed, we had never made such progress before. Those were among the few terms at old District Number 11 when every scholar was interested and did not wish to lose a day.

Tidings as to what a good school we were having and how well our schoolroom looked spread abroad, and excited envy among the scholars in District Number 9, two miles to the east of us. There had been rivalry and sometimes open hostility between the two schools for several generations. The Number 9 boys appeared to hate us, for no better reason than that we were in advance of them in scholarship. Our schoolhouse was rather better than theirs; we had everything a little better.

Our new melodeon augmented their envy. On Friday evening of the seventh week of school, we gave an entertainment with music. Master Pearson read selections from "The Last Days of Pompeii," and exhibited pictures of Mount Vesuvius, Pompeii and Herculaneum. A young lady played the melodeon. Thomas Edwards declaimed "The Roman Sentinel," and the school sang songs from our new book.

While the master was reading, we heard a great stamping of feet in the entry outside. The door then opened, and four of the Number 9 boys tramped in and took seats together in the farther corner of the room.

All four were well known to us. They were Newman and Rufus Darnley, Coleman Hays, and Clinton McCausland. It looked a little as if they had entered with a design to be rude, or at least offensively independent. We talked with them as usual, however, after the entertainment was over. Newman had never seen a melodeon, and looked at the instrument with curiosity, making several jokes about it. We invited them to come again the following week, and bade them to ask as many of the other Number 9

boys and girls as cared to hear us sing.

"All right," they said, with a laugh.

This was on Friday evening. During the following Saturday night the melodeon disappeared from the schoolhouse. There was no school Saturday, and no one went there. On Sunday evening there was a Methodist prayer meeting at the house. The melodeon was then discovered to be missing.

There were tracks in the snow under one of the windows outside, and marks on the windowsill showing where the sash had been pried up and the melodeon taken out. A brass button off a jacket was also picked up in the snow. Melodeons at that time had legs and pedals which could be taken off, unlike the later cabinet and parlor organs of which they were the prototype. With its legs removed, the body of the melodeon resembled a box three and a half feet long by two feet wide and a foot in depth. Nor was it so heavy but that one could lift it easily and draw it away on a hand-sled.

No snow had fallen for a week or more; the roads were well trodden. It was impossible to track the thieves, or do more than guess which way they had gone. Not only had they taken the melodeon, but they had searched all the desks in the house and captured every copy of "School Songs." It would be difficult to describe what a wave of indignation and excitement swept through Number 11 that night!

Naturally, we suspected the Number 9 boys from the first; but of course they could not steal our melodeon and install it at their schoolhouse without being detected. Indeed, we could not imagine what good it would do them to take it. Six of us went over to the Number 9 schoolhouse that very night and looked in. We could see no sign of the melodeon. On our way back we called at the Darnley farm and asked Newman and Rufus if they knew any-

thing about it. They only laughed at us. We could learn nothing whatever.

The news spread rapidly. We made inquiries everywhere. Even the youngest scholars and little children over in Number 9 were cajoled and questioned as opportunity offered, in the hope of picking up a clue. The teacher in that district, too, as well as several of the older persons, took the matter up and questioned the boys closely. But not a thing could be learned.

Worse even than the loss was the sense of being completely baffled as to who had taken it or where it had gone. Several of us attempted to enact the role of detectives. We scrutinized that brass jacket button, and even interviewed clothing dealers and tailors at the three villages nearest to us. We also sent two of the older girls to make secret inquiries over in Number 9 as to all the jackets worn by the boys there. But we gained no clue.

There were a number of false clues. We heard of several melodeons being sold in other towns round about; but on obtaining particulars, they all proved different from ours. The conclusion finally settled on was that some of the Number 9 boys had taken the melodeon out of spite, and buried or burned it.

* * *

So I may as well relate here what had happened, although the facts did not all come out until 20 years later.

Our suspicions concerning the Number 9 boys were well-founded, but of the four who had come to our musical entertainment that Friday evening, only one of them, Newman Darnley, was concerned in the capture of the melodeon. The three others knew nothing about it.

On that Saturday afternoon Newman had gone to mill four miles from home, with a grist of corn and barley. His road lay through Number 11 and beyond it. As it was late in the day, he had to wait his turn at the mill till evening, and meanwhile he fell in with a crony of his named Alfred Battellow, a boy whose habits were far from good. To pass the time they called at a rather disreputable grocery near the mill and had a drink of hard cider.

Newman did not get away from the mill till after nine o'clock in the eve-

The Amateur Poet's Corner

Because of the number of contributions, we do not return poems not published. Keep a copy of your poem.

The limit in length is sixteen (16) lines, and each poem submitted for this corner must be original and the work of an amateur poet. Therefore, when sending in a poem, be sure to state whether you are the author of it. \$2.00 will be paid for each one printed. Check will be mailed on or about the first day of month following publication.

Send poems to Poetry Editor, *American Agriculturist*, P.O. Box 367, Ithaca, N. Y.

The Poet

He wan't so different from other folks,
'Cept his eyes was somehow brighter,
And when he smiled 'twas as if
He wanted to. He used
Plain words—like you and me—and yet
They seemed dressed up the way he
spoke.

He seen the little things; asked how
That maple branch got broke, and
watched
Warm milk foam frothing into pails.
You know, I wish he'd stop again.

—Elizabeth Oliver,
Pittsfield, Maine.

ning. Alfred set off with him. On their way, they stopped at a public house, known as Tibbetts' Tavern, to talk with the drivers of two teams which were conveying supplies to a lumber camp up in the great woods near the boundary, and had put up at Tibbetts' for the night. These supplies formed bulky loads of boxes and barrels, stowed on two long sleds which stood in front of the tavern.

The schoolhouse in Number 11 was at the forks of the road, half a mile from Tibbetts', and it was after leaving the tavern, on their way home, that the two, feeling fit for some prank, hatched the plan of taking our melodeon and hiding it in one of those loads bound for the lumber camps.

The scheme presented itself to them as an enormous joke. They drove home with the grist; but after Newman's parents and the rest of the household supposed that the two had gone to bed, they sallied forth again, procured a box, a hammer and nails, and taking a hand-sled, returned to the schoolhouse. By this time the night was well advanced. No one was astride on the highway. They broke in, got out the melodeon, boxed it up along with its legs and the "School Songs," and hauled it to the tavern.

By this time everyone at Tibbetts' was sound asleep; and the two boys found little difficulty in overhauling one of the loads enough to slip the box inconspicuously inside it. This done, they sneaked home, vastly tickled over what they deemed a tremendous joke.

Early the next morning the supply teams went on their way with their loads to the lumber camp, seventy miles to the north. And even after the melodeon was discovered in the load, it was supposed to have been sent to the loggers by some friend or charitable person, to beguile their scant leisure time. The loggers received it with delight, without a thought that it was not designed for them.

A reed instrument like a melodeon is hardly adapted to terpsichorean strains. But those loggers contrived to dance to it. Of the thirty men at this camp, there were two who could play it. They played everything on it, including jigs of quickest time and wildest movement.

After a hilarious winter at the lumber camp, the melodeon migrated over the border. In the latter part of March, when their winter's work was done and the Canadian loggers were ready to return to their homes, a discussion arose as to who should have the instrument, for they had regarded

The Song of the Lazy Farmer

I LIKE this time of year, by heck, when breezes blowin' round my neck feel soft and warm, and ev'rything is fragrant with the smell of spring. The birds are comin' back once more, they're twitterin' around the door, the little pigs lie in the sun on pleasant days, they have begun to grow the hams, that come next fall, will hang upon the smoke-house wall. The wabby colts are tryin' out their legs, and stumblin' all about; the calves are callin' to their maw, while ever since the first good thaw the cows mill round about and pass their hay, because they long for grass. All Nature's bustin' out with life, and all is peaceful by my wife.

She gits ambitious like in spring, she seems to think that ev'rything should all be done at once, and so she seems to think that I should go and plant the radishes and beans, and pick a mess of turnip greens. She wants the chicken house cleaned up and mange

cure rubbed upon the pup, she says it's time to test the seed and fan the oats, she seems to need a lot of things agoin' on to make her happy, I must don my overalls and go to work, or she thinks that I want to shirk my duty, for she doesn't see the beauty of the spring; to me, it seems all wrong to toil away and miss the restful sort of day that makes you want to stretch and yawn and rest instead of rake the lawn. I wouldn't spoil the days like these by gittin' down upon my knees a-plantin' garden seeds, it is a waste of perfect days, gee whiz, that is just meant for joy and rest, while birds are singin' in their nest.

Wants "Youth's Companion" for 1870, 1873 and 1918

OUR FRIEND and subscriber, Mrs. Mittie Hazard, Nichols, N. Y., has for some years been collecting old copies of the "Youth's Companion" during the period when C. A. Stephens' stories appeared in each issue. At present she lacks issues for the years 1870, 1873, and 1918.

If she can get them, she prefers bound volumes; but if they are not available, she would like single copies if they are in good condition. Mrs. Hazard would appreciate a letter from any subscriber who has copies or bound volumes of the "Youth's Companion" for any of these dates.

The thanks of our readers who enjoy C. A. Stephens' stories should go to Mrs. Hazard as she has supplied us with copies of a number of stories which have appeared in recent issues of *American Agriculturist*.

it as a present to them. Six of them at last packed it on a hand-sled and hauled it away to a little settlement called Black Lake in the Province of Quebec, thirty or forty miles above the boundary. In the neighboring hamlet of Garthby, there was a public school, in charge of a young lady named Marie Ladoucier, who had some proficiency in music.

Several of the lumbermen were admirers of Mademoiselle Ladoucier, and it came about ere long that our lost melodeon was installed at this little French schoolhouse, where for three months it gave unbounded satisfaction, morning, noon and night, as well as at evening meetings of the French people. They knew nothing of its previous history, and had no idea but that it was honestly come by.

Not till August did so much as a lisp reach us as to its whereabouts. French-Canadians at this time had begun to come down over the border to work not only at lumber camps, but on farms. In July that summer one of these same young men from Black Lake called at our place, looking for a job during the haying season. We hired him, and he was with us four weeks. His name was Benoit Lecharme.

He could speak a little English, and as the melodeon was the subject of occasional conversation, he heard of it. It was recalled afterward that he asked a great many questions about it—how it looked, where it was bought, what maker's name was on the front of it, and so forth. Probably he surmised that this was the melodeon that had appeared at the lumber camp and been carried to Black Lake.

But if so, he was discreet. He said nothing, and at last went home to Canada without dropping a hint. Per-

haps he wished first to make sure before saying anything; perhaps he desired to talk it over with Mademoiselle Ladoucier.

One night about a fortnight after Lecharme left us, as we were sitting down to our five o'clock supper, a sudden jingling and rattling out in the yard came to us through the open windows; and glancing out, we espied the oddest outfit ever seen in that place.

There were two little black, shaggy horses with brass-mounted harness, collar and hames, attached to a queer vehicle, half cart, half wagon. There was a box in the back of it, on which perched a black-haired boy wearing a fur cap—although this was August. On the seat in front, holding the reins, was an older boy, dressed in much the same way; and beside him sat a young woman, apparently nineteen or twenty years old, soberly dressed in black, except for her hat, which was adorned with bright red roses and a profusion of light green ribbon.

The entire "rig" wore an aspect so foreign to Maine that we all rose hastily from the table; and my cousin Addison went out to see what was wanted.

For a moment or two not a word was said. Our visitors seemed at a loss how to make known their business. It was the young lady who spoke first, choosing her words carefully, and attempting to speak slowly and very distinctly, as if she had already rehearsed what she meant to say.

"Good afternoon!" she said. "Ees thees the farm fere Meester Benoit Lecharme did labor for to make the hay four weeks ago?"

"Yes, Lecharme worked here," Addison replied.

"Eet was then here at your school that a seraphine was los' las' weenter?" the young lady went on slowly.

"Well—yes. We lost a melodeon," Addison explained; and we all pricked up our ears, although we had never heard a melodeon called by that name.

"Eet ees the same, then!" continued the young woman. "We have bring eet back to you."

"Why, how did you come to have it?" cried Addison in astonishment. "You do not live near here, do you?"

"No, m'sieu'. We leef in Canada. I am the school teacher at Garthby. Las' spring some lumbermans bring this seraphine to us from their camp in the woods. They think eet ees their own. We have eet then in our school-house; and we have play eet in our school effery day."

"Well, well, well," cried Addison.

"But now," our visitor continued, "Benoit he com' back, and he say this seraphine, eet ees not for us. Eet ees stole by some bad peoples. So we bring eet back."

"I am the school teacher at Garthby," she explained again. "My name ees Marie Ladoucier. And these boys are my pupeels. We have com' to bring the maylodayon back to you."

There was no mistaking the honesty and good intentions of this young French school mistress and her two pupils. We made them welcome, and entertained them for the night. In fact, they remained three days.

We set up the melodeon and held a musical jubilee over its return. Despite its peregrinations, it seemed to be uninjured. Mademoiselle Ladoucier played very well; and she sang several French school songs.

So, after all the dreadful suspicions which had filled our minds, the melodeon came back, safe and sound. In truth, the world is never half so bad as some people think it. Despite our dark suspicions, the young people in Number 9—all but one—were quite innocent of any wrong-doing; and these youthful Canadians had taken great pains to restore our property as soon as they learned of our loss.

GET MORE PROTECTION WITH THIS NEW POLICY

COSTS \$2.00 A YEAR

THE ACCIDENTS WHICH THIS POLICY COVERS ARE

1. By the wrecking or disablement of a pleasure type automobile, an automobile truck, a horse drawn wagon, cart, sleigh, or sled, in which the insured is riding or driving.
2. By the wrecking or disablement of a public conveyance provided by common carrier for passenger service only (aeroplanes excluded) within which the Insured is riding as a fare-paying passenger in the place regularly provided for passenger service.
3. By being struck, knocked down, or run over while walking or standing on a public street, public sidewalk or public highway by a moving vehicle.

CASH BENEFITS PAID AS FOLLOWS:

1. \$1,000.00 for loss of Life, or the loss of the sight of both Eyes; or the loss of any two members, such as a Hand or Foot.
2. \$500.00 for loss of the sight of Eye, or Hand, or Foot — Loss of Life or Member must occur within 30 days from the date of accident, otherwise weekly benefits are paid.
3. \$10.00 a week for as many as thirteen weeks while totally disabled unable to do any work whatsoever — benefits beginning immediately following the accident. No benefits are payable for partial disability.

This protection applies on accidents happening anywhere within the United States or Canada. Death benefits are payable to the insured's estate, all other benefits payable to the insured.

These benefits are paid where the insured is between the ages of 15-59 years. One-half benefits are paid ages 10-15 and ages 60-74.

WHO CAN HAVE THIS POLICY

This policy is available to anyone who is not crippled or who has not lost the sight of either eye or limb — the policy does not provide indemnity if the insured is under the influence of intoxicants, nor does it cover a watchman, law enforcement officer, volunteer or paid fireman, or railroad employee while on duty.

OUR GUARANTEE

Each policy is sold with a money back guarantee. After you receive your policy you have 5 days to look it over and if it is not satisfactory, return it and it will be cancelled and your money refunded at once.

Mail your application to:

North American Accident Insurance Co.

N. A. Associates Department

10 North Cherry Street,

Poughkeepsie, New York.

"I lost my ticket. Can I come in, anyway?"

I do hereby apply for a North American Accident Insurance Policy, Series 416, which costs \$2.00 a year, and understand that I can carry this new policy in the place of the \$1.00 or \$1.25 policy, but not in addition to it.

THE EVER-NORMAL granary of the United States Department of Agriculture is not enough to safeguard the feed requirements of the dairymen of the Northeast. This is being amply demonstrated right now. What the Northeast also needs is an *ever-normal haymow*.

Sectional Discrimination

As a matter of fact, the *ever-normal granary*, sold to the public as a means of protecting the nation's food supply, is not working that way. Instead, it is being used to hoard millions of bushels of corn and to support an artificially high price for corn which is right now taking serious toll from northeastern poultrymen and dairymen. *If the ever-normal granary were fairly administered in the interests of all farmers, it would have been tapped this spring and used to supply northeastern poultrymen and dairymen with badly needed corn at less than what they are now paying for it.* From the failure of Mr. Wallace and his associates to draw on the enormous stocks of government corn to help make up the feed deficiency in the Northeast caused by last summer's disastrous drought, only one conclusion can be drawn.

The ever-normal granary is not what it has been represented to be, but is simply a device for helping the midwestern corn grower to get more for his corn than the market warrants.

Ever-Normal Haymow

Now, I have been contending on this page and I shall continue to contend because I have the facts, that the policies of the United States Department of Agriculture constitute a terrific drag on the agriculture of the Northeast. Periodically this is denied from Washington. I therefore would like to issue a challenge. *This challenge is for the United States Department of Agriculture to perfect machinery for storing hay in the Northeast in surplus years and for making loans on this hay above the market.*

Please understand that I don't advocate the acceptance of my challenge, but I lay it down as a fundamental fact that it is unsound, unfair, and in my opinion, illegal for the government of the United States to subsidize the midwestern corn-grower at the expense of northeastern poultrymen and dairymen and I furthermore submit that, if such subsidization is to continue, one way to balance out the injustice is to extend to the northeastern hay-grower the same privileges and accommodations which have been worked out for the midwestern corn-raiser.

Not Hopeful

Of course, I am not at all hopeful that any such fair adjustment will be made. *For one thing, the Northeast*

does not have the aggressive services available which the corn and cotton grower get out of the American Farm Bureau Federation. For another, we do not have an outstanding agricultural Congressman from the Northeast who will lead raids on the public treasury with the nerve and effectiveness which Congressmen from the Midwest and South raid it in the interests of their agricultural

The picture above and the one at the right illustrate the working out of a most interesting natural law. The filly in the lead, above, is Tatters, daughter of Rags. The sire of Tatters is Highland Skylight—a five-gaited Kentucky saddle horse which loves to strut and put on his act in the show ring. From her sire, Tatters has apparently inherited what must have been some of his acquired traits. She likes to put on a show. She even, as is shown in the picture, chooses to put the show on by running in a circle around her spectators. All this she has done without any training, as she is scarcely halter-broken. What is it that old Highland Skylight passed on to his daughter which makes her a show-off and how did he do it?

(Right): Head and tail up and heels flying, Tatters, without any urging or the slightest encouragement except the oh's and ah's of the people watching her, really shows what she can do.

Tatter's picture first appeared on this page in the issue of March 18, 1939; the pictures of the colts following her around the circle, in the September 2, 1939, issue.

constituents. Perhaps this is a good thing and a credit to our Congressmen. Right now, however, this statesman-like attitude isn't helping the price poultrymen and dairymen are paying for corn, nor is it helping them find a supply of badly needed hay.

Suggestion

Since I am sure that the United States Department of Agriculture will not accept my challenge, I suggest that the farming and industrial interests of the Northeast, whenever we have a good year, finance the storage of feed surpluses and carry them over with the idea of gradually working the Northeastern poultrymen and dairymen into a position

where we don't get caught in an emergency and do not have to depend to the extent we have in the past on feedstuffs purchased in the Midwest. *Unless the Northeastern agriculture can make this adjustment I am afraid it is in for some tough days ahead.* Right now we are prevented by the government from buying feed at the natural market when it is plentiful and forced by scarcity to pay high prices for it when it isn't.

* * *

GRASS SILAGE NOTES

One of our silos at Sunnygables is 14' x 38'. We filled and refilled this with grass silage last summer until even after it had settled it was very nearly full when we opened it in the fall.

Since we follow the practice of sprinkling the top of the silage in a silo for two or three weeks after we stop filling, we get very little waste

and sixty head of young cattle.

While I think it would be better to feed a little hay with this silage and therefore make it go farther, our experience with grass silage fed once a day this winter, supplemented by a little grain ration, convinces us that we have hit upon one of the most economical and healthful ways of handling a bunch of young cattle we have ever tried out.

We let these Herefords and Angus heifers out of the barn right after breakfast each morning and they go down into the woods and spend the day there. About three o'clock they come up to the barn all of their own accord. We let them in about four. The feed bunks are then full of grass silage with a little grain on top. We determine the amount of silage to feed by whether or not they have it all cleaned up by the time to let them out the next morning. I think it is a safe statement to make that we haven't averaged to waste ten pounds of silage a day under this method of feeding.

We plan at Sunnygables and Larchmont this spring to start filling our four silos with grass silage the last of May. We know that we will have a lot of meadows with poor stands and we haven't the slightest idea what we are going to get on our new seedings, but expect plenty of weeds. What we shall do is to cut whatever grass and weeds there are until we have our silos full, before we even stop to put up any dry hay. At that point we will probably plow some fields and put in some soybeans for refilling the silos and rely for our dry hay supply on whatever second and third cuttings show up, or on some emergency hay crop.

In making grass silage this year we shall again use some phosphoric acid, but we may substitute for the use of acid considerable winter barley, if this crop comes on in good shape.

* * *

WINTER BARLEY

A great many readers of this page have followed our experience with winter barley. We are still experimenting with the crop. This year, as last, we are growing a variety which has smooth awns and a very stiff straw. It was sown on a dry field last fall which is not naturally very fertile. We intended to top-dress it with manure this winter but on account of the great distance from the barn and the heavy snow we have not yet done so.

Because of the dry weather last fall the barley germinated very slowly and went into the winter with a rather sparse growth. We are not looking for too big a yield, unless we can top-dress the field with manure, but if we don't get it we will not be in a position of blaming the barley. We shall be able, however, again to test the livability of the plant under what have been really adverse conditions.

* * *

ENGLISH CART

We have just received at Sunnygables a two-wheeled English cart, mounted on rubber tires. This cart was shipped to us from England last fall.

Accompanying the cart is a short pole which can be quickly attached to it to convert it into a tractor-trailer, the hills, of course, being removed at the time.

We propose to get some pictures of this cart and run them on this page in an early issue. We think it embodies some features which may well be adapted to use here in the United States.

and there was very little waste in this silo.

I presume that it is safe to say that we started off with a settled 35 feet of silage in a fourteen-foot tub.

We started feeding out of this silo in October and the silage in it has constituted the sole roughage feed for approximately fifty-five yearling Hereford and Angus heifers all winter. The silage will run out about the middle of April.

Allowing for the fact that due to the dry weather we started feeding silage out of this tub earlier than we ordinarily would have, I draw the conclusion that in a normal year we can depend upon thirty-five feet of grass silage in a fourteen-foot silo to furnish plenty of roughage for between fifty

Law on Maple Syrup and Sugar

What is the law relative to the sale of maple sugar and syrup?

There are three points which must be kept in mind. First is the Federal Pure Foods Regulation, reenforced in most cases by a state law, which prohibits the adulteration of maple sugar or syrup with any other type of sweet.

Second, there is the Federal Pure Foods Regulation, which puts the lead tolerance on maple sugar and syrup at 1.3 parts of lead to 1,000,000 parts of maple syrup or sugar. Not everyone agrees that more than that much lead does any damage to consumers; but so long as that is the law, it has to be observed. Sugar or syrup containing more than that much lead can be confiscated by federal authorities and cannot be sold until the lead is brought below the tolerance. That is a costly process, and of course the cost of it is passed back to the producer. This lead comes from the solder in buckets or evaporating pans. Professor J. A. Cope of the New York State College of Agriculture, Ithaca, N. Y., has outlined a program to keep lead below the tolerance, and will be glad to send it on request.

Third, New York and other states require labeling of maple syrup and sugar with the statement that it is pure, a statement as to the volume or weight, and the name and address of the maker.

In addition, maple syrup must weigh 11 pounds to the gallon. If it weighs more than that, the sugar will crystallize; and it is illegal to sell syrup weighing less.

Investigate First

In the last issue we referred to the Kay Egg Company of 2161 First Avenue, New York City, and reported that letters to that company had been returned marked "Removed—left no address." The shipping tags sent out by this company gave a New Jersey bank as reference. It is important to remember that a bank reference is no guarantee of reliability. Firms have been known to use banks as reference without permission, if they have an account in them. A bank is not a credit rating institution and inquiries to a bank about reliability will usually bring information that the company has maintained a satisfactory balance which means little or nothing.

The unfortunate experience of poultrymen who have shipped eggs to this company and not received pay, points again to the importance of checking on reliability before making shipments.

Farm Service Bulletins For You

IN ORDER to make available to readers more information which will help increase profits, the editors of *American Agriculturist* have prepared several mimeographed bulletins on timely subjects. These are available to any reader without cost other than 3c each to cover mailing and shipping costs. Bulletins now available are:

- ☐ No. 101—HOW TO RAISE BABY CHICKS.
- ☐ No. 102—PULLORUM DISEASE OF CHICKS.
- ☐ No. 103—HOW TO CONTROL MASTITIS.
- ☐ No. 104—HOW TO BUY A HERD SIRE.

Check the ones you want, include mailing cost, and return the coupon to *American Agriculturist*, Box 367-S, Ithaca, New York.

From time to time we plan to make additions to the list available.

This concern was not located in the area which houses most of the egg receivers. This in itself is usually a sign that caution is the word.

In this case the first step toward getting any settlement is to locate the head of the firm, which, unfortunately in New York City, is a very difficult thing to do.

* * *

"Tired Them Out"

"Last December two men called, claiming to represent a Memorial Park. We are getting old. They stayed until they tired us out. Finally, we let them have some securities for some lots. They claimed they had orders enough that the price of lots would double the first of the year and in three years would double again."

In recent years there have been a number of schemes for selling cemetery lots on the promise, stated or implied, that they would be resold at a huge profit. This scheme has received much unfavorable publicity in the nature of warnings to investors. We hope that the money that this old couple needed so badly has not been lost, but we are afraid it has.

* * *

Repairs

"On January 23 a sewing machine repairman called, indicating that he was representing the Singer Company. We let him take a part of our machine to be overhauled. After two weeks we wrote to the Nashua, N. H., office of the Singer Sewing Machine Company where I was informed that they never had a man by that name working for them. We did not pay any money as the work was to be paid for on return."

In this case the subscriber took the license number of the agent's car which is a very good thing to do. We are asking him to return the machine parts. There is no evidence that this man intended to be dishonest. We are mentioning the incident to show the tendency of independent agents to give the impression that they are employed by a well known concern in order to inspire confidence. The danger in this case is that if the work is unsatisfactory there is little opportunity to get satisfaction. It seems logical to get repair work done locally or by men who are employed by the manufacturers or sales agencies of the machine you wish repaired.

* * *

We Must Have Proof

"Please expose these crooks in the paper."

This is a request that we often get, and when we have the evidence to back such a statement we are glad to do it, so that our subscribers may be protected. But when, as it so often happens, the matter is one of a difference of opinion and we have no evidence that would stand up in a court that the person or firm named is crooked we cannot in justice to all, "expose" any individual or firm. This applies even in some cases where we are morally certain that our subscriber is right. It is not enough to be morally certain—we must have the proof, otherwise, sooner or later grave injustice would be done to innocent parties.

* * *

No Value

"I bought some shares of stock in the Cornell Drug Stores, Inc., of New York City, through the mail, some years ago. I have received no dividends. Is this company any good? What can I do about it?"

The Cornell Drug Stores, Inc., of New York was a fraudulent stock promotion by one Nicholas C. Partos, who was sentenced to serve five years in jail for his activities in this connection. According to records, Cornell Drug Stores failed in 1931.

TWO DEAD, TWO HURT IN AUTO CRASH

Car Turns Over Twice-- Occupants hurled through roof

Policyholder, Ruth A. Keyes, East Andover, N. H. was one of the four occupants of this car. She was more fortunate than the others. Her injuries were broken ribs and body bruises. Being disabled for thirteen weeks she was paid \$130.00 in weekly benefits.

Our agent, Bill Stark, who delivered the check says, "You never can tell when you will be in an accident—it was just 5 days after Mrs. Keyes received her policy that she was in this terrible accident."

The Last Forkful of Hay In the Mow

What can be done if your haymow, like the one in this picture, will not last until grass? If good hay cannot be had at a reasonable price, you can piece out with Roughage Supplement. Three pounds of this feed will replace 4 pounds of hay or 12 pounds of silage. The formula:

400 lbs. Wheat Bran
500 lbs. Yellow Corn Meal
300 lbs. Dried Beet Pulp
500 lbs. Oat Mill Feed
300 lbs. Cane Molasses

2000 lbs. Roughage Supplement
1282 lbs. Total Digestible Nutrients

Guaranteed Analysis

Protein . . . (minimum) . . .	8.00%
Fat . . . (minimum) . . .	2.00%
Fiber . . . (maximum) . . .	12.00%

In order to turn the cows out as soon as possible, you may want to speed up part of your pasture with nitrogen. Choose a good piece of pasture and apply 60 pounds of nitrogen per acre.

Any one of these materials will supply 60 pounds of nitrogen:

400 lbs. Nitrate of Soda
300 lbs. Sulphate of Ammonia
300 lbs. Cyanamid (use very early)
300 lbs. Cal-Nitro (ammonium nitrate with lime)
150 lbs. Uramon

Of these, Uramon is the cheapest per unit of nitrogen and Nitrate of Soda is the most expensive. There is little difference in the cost of the other three.

The cost ranges from \$5.00 to \$7.50 per acre, depending on the source of nitrogen you use,

and you will need about one acre for every six cows. You can turn the cows on this piece a week to ten days earlier than normal.

Feeding Turkey Breeders

Turkeys need more protein than chickens. G.L.F. Turkey Breeding Mash supplies 24% protein and is very rich in the vitamins needed for hatchability. Feed the Breeding Mash 50-50 with scratch grains and keep both mash and grain before the birds at all times.

Pullets and young toms make the best breeders. Lights on the breeding flock will produce earlier eggs. Eggs should be gathered at least three times a day, kept in a cool place, and set not more than two weeks after they are laid.

Turkeys like to run outdoors and they should be allowed to do so whenever possible. Open-front houses or sheds will give them enough protection in case of bad weather.

How a Little Oil Can Go a Long Way

Poultrymen sometimes ask how G.L.F. Starting & Growing Mash can do a good job of preventing rickets when it contains only four pounds of cod liver oil per ton. The answer is shown right on the open formula tag which says, "Cod Liver Oil reinforced in Vitamins

A & D (400 A.O.A.C. Chick Units of D and 3,000 U.S.P. Units of A per gram)."

The factor that prevents rickets is Vitamin D. Ordinary straight cod liver oil is guaranteed to contain 85 units per gram. The cod liver oil used in G.L.F. mashes contains 400 units—nearly five times as much. In other words, the four pounds of reinforced oil in Starting & Growing Mash is equal to almost 20 pounds of straight cod liver oil.

The Vitamin D content of this reinforced cod liver oil is proved by careful tests on live chicks before it is used in the mash. Over a period of years, it has proved safer and more economical for G.L.F. patrons to use this high potency cod liver oil in small quantities rather than to use large amounts of straight cod liver oil or fish oil.

Bags Now Easier To Open

Ever try to open a feed bag—get disgusted—and end up by slashing the bag across the top? That knife slash cuts the bag's return value from a possible 9¢ to 2¢ or even nothing.

G.L.F. feed bags are easy to open if you know how, and the new two-color bag thread makes them still easier.

Mash and grain bags now have a white

thread on the front of the bag and a red thread on the back. Dairy feed has white on the front and green on the back. The thing to remember is to open the bag on the white-thread side at the right-hand edge.

Break the first or second loop with a nail, pencil, or knife, take hold of the free end of the white thread with one hand and the colored thread with the other hand and then pull gently on both threads and the thread will unravel easily.

It takes only a few seconds to open a bag in this way and it is the first step in the proper care which insures good returns on your used bags.

THE FARM PAPER OF THE NORTHEAST

One Church for FOUR

IT TOOK 20 YEARS TO
GET TOGETHER

but we Did It!

By HENRY H. BARSTOW, *Pastor.*

WITH a neighborhood population of around 300, the village of McLean, Tompkins County, New York, has four Protestant Church buildings but only one Federated Church. The Episcopal and Methodist Churches are closed — the former long since changed into a residence, and the latter recently abandoned, at least for a year, by action of the Central New York Conference. The Federated Church uses the Baptist Church building in the summer and, because of better heating facilities, meets in the Universalist Church building in the winter.

Talk of federating the McLean Protestant Churches started about 20 years ago, but was not accomplished until 1931, under the pastorate of Rev. William Wiser. Now the Church is made up of organized units from the Baptist, Universalist and Methodist Churches, each headed by a Chairman, as well as a few members of other churches who are not so organized. All groups, organized or not, work together in a remarkably fine spirit of cooperation for the whole Church.

In one sense, I might be called a "federated" pastor. My father's parents were Methodist and my mother's Baptist. When my parents were married, they joined the Episcopal Church, but later went to a Congregational Church, where as a child I was christened. For many years I was a Presbyterian minister, and am still a member of a Presbytery.

Today our Church is thoroughly organized with a Board of Deacons, a Program and Activities Committee, a Finance Committee made up mainly of representatives from the denominational groups, and also a Treasurer and a Clerk. We have a Choir, a Young People's Society, a Sunday School, and a Women's Guild. Administrative affairs are supervised by a Church Chairman who is an ex-officio member of all organizations. A written constitution, formally adopted by vote of the con-

Why Do Churches Quarrel?

WITH some church members, the only good member of another church is a dead one! That's the reason why it is often so difficult to unite several inefficient poor churches in a community into one good church that can accomplish something. Too many people put creed and dogma ahead of true religion. What difference does it make to what church we belong when we are all travelling the same road and toward the same ideals of love for man and God?

But once in a while there is an exception, where the churches in a country community have gotten together to become a mighty power for good. Mr. Barstow describes such a federated church in the interesting story on this page.

gregation and recently revised, controls all matters of organization procedure. The denominational groups are retained, partly because of property holdings and partly because some members want to retain their denominational connections.

The move toward federation was gradual. When the idea was first discussed, each Sunday School had about 15 members. First, the Baptist and Methodist Sunday Schools decided to meet together. This continued for about a year, and then after several invitations and some hesitation, the Universalist

We use the Universalist Church building in the winter because it has better heating facilities.

Sunday School joined the group. In the meantime, each Church continued to have its separate services.

The next step was an arrangement by which one visiting minister occupied the pulpit in each of these three Churches for four months, all congregations meeting in whichever Church was being used — an arrangement which continued for about three years.

It was quite evident that a resident pastor was needed, so for several years that need was partially met by ministers who were studying at Cornell University. These ministers preached Sundays, occupied one of the local parsonages, and did as much administrative and pastoral work as their time would allow. The present pastorate is the first full-time arrangement the Federated Church has had.

At present the Church has no standing debt, few unpaid bills, a competent set of officers, and an excellent parsonage. As pastor, I have little direct official responsibility other than advisory supervision, pastoral and community service, and leadership in programs and public worship.

Those who led in the movement from the first tell grim tales of stubborn opposition, harsh recrimination, and criticism that at times marked the long struggle toward unity. Denominational loyalty, outside interference by sectarian officials, and (Turn to Page 27)

Firestone

GROUND GRIP TIRES

ARE AS DIFFERENT FROM OTHER TRACTOR TIRES
AS HYBRID SEED CORN IS FROM ORDINARY CORN

Hybrid seed corn averages 15% higher yields than ordinary seed corn. Heritage is certain, because pollination is controlled. Plants are more vigorous—have greater resistance to drought, disease and insects. Ears are uniform in size and quality. Roots go deeper. Stalks are sturdier. Harvesting costs are lower.

With ordinary seed corn, yields are smaller. Heritage is uncertain because kernels may receive pollen from the poorest neighboring plants. Plants have less resistance to disease, drought and insects. Ears are uneven in size and quality. Root structures are shallow. Stalks are weaker and easily blown down. Harvesting costs are higher.

**BRACED TRACTION BARS
ALWAYS GRIP!**
★ ★ ★
**BROKEN TRACTION BARS
BEND AND SLIP!**

SUPPOSE hybrid seed corn sold for the same price as ordinary seed corn. There's no question which kind a farmer would buy.

Firestone Ground Grip Tires sell for the same price as ordinary tractor tires. Yet they give greater traction, automatic self-cleaning action, smoother riding and longer wear. Therefore, there's no question what tires farmers are buying!

Harvey S. Firestone pioneered the first practical pneumatic tractor tire and put the farm on rubber. He found that the only practical way to prevent a rubber traction bar from bending back and losing its grip was to triple-brace it. Today, triple-braced traction bars are an exclusive Firestone advantage, protected by a U. S. Patent. That's why no other tractor tire has triple-braced traction bars.

If you are figuring on changing over your present tractor, your nearby dealer will gladly show you how little it costs. And when you buy your new tractor, order it equipped with self-cleaning Firestone Ground Grip Tires — **the greatest traction tires ever built!**

Listen to the Voice of Firestone with Richard Crooks, Margaret Speaks, and the Firestone Symphony Orchestra, under the direction of Alfred Wallenstein, Monday evenings, over Nationwide N. B. C. Red Network.

A Sound Pasture Plan Pays Dividends

By R. P. ATHERTON *

IN NORTHWESTERN Connecticut there is a town called Canaan. Its name recalls the "Land of Canaan" of biblical history, a promised land flowing with milk and honey. We are not too sure about the amount of "honey" found in Canaan, Connecticut, but we do know that plenty of milk is produced there.

Edmund Sanger owns a 160-acre dairy farm "more or less" in that area, with 65 acres of meadowland and around 34 acres of pasture. He has limed his land, produced a better grade of roughage, and all in all has been a progressive farmer. Three years ago, with the aid of the Assistant County Agent in Litchfield County, he drew up, for his own satisfaction, a three-year farm plan. This program called for a definite acreage of pasture to be topdressed or seeded, so many acres of tillable land seeded to alfalfa,

Mr. Edmund Sanger himself.

enough milking cows to consume this roughage, and more young stock for replacements. Along with this plan, a pasture record was to be kept each year.

A few years ago the Connecticut State Dairymen's Association offered a prize to the farmer in each county who kept such a record and who produced milk at the lowest barn feed cost. In 1939 Mr. Sanger surprised himself by winning this prize for Litchfield County.

His is a typical valley farm, with good soil but, with the exception of a few acres on high ground which are very dry, apt to be moist due to a high water table. Because some twenty tons of ground limestone have been used each year, the meadowland shows a pH test of about 5.6. Through consistent soil testing, this land was found deficient in phosphorus and potash which means that for best results some 500 lbs. of superphosphate and 150 lbs. of potash per acre are needed at each seeding.

Mr. Sanger's pasture season this past year was from May 7 to October 21, practically six months with very little barn feeding. His layout was as follows:

- 12 acres of permanent pasture sod which had been limed at the rate of one ton per acre, and during four years had received 1,000 lbs. of superphosphate per acre;
- 9 acres of permanent pasture, limed at the same rate as the 12 acres, but not fertilized;
- 4 acres of ladino clover seeded in 1937 with a mixture of two pounds of ladino and three pounds of orchard grass per acre;
- 5 acres of ladino clover and orchard

**MORE TRACTORS ARE EQUIPPED WITH FIRESTONE
GROUND GRIP TIRES THAN ANY OTHER MAKE**

Pasture on lenox soil topdressed with 400 lbs. of superphosphate in 1937 and again in 1938. This picture was taken in 1938 with white dutch clover showing 6 to 12 inches in height, mingled with bluegrass. Before top-dressing, this pasture was very poor.

grass seeded in 1938;
4 acres of ladino clover and orchard grass seeded with oats in 1939 and the oats pastured off instead of cutting them for hay;
50 acres of meadowland where the second crop was pastured as needed, enough hay being cut for winter feeding from the first crop.

Twenty-five milking cows were pastured on this area during the hot dry summer of 1939, and the average barn feed cost per 100 lbs. of milk produced was 23c.

"What type of pasture feed produced the milk at the lowest cost?" I asked Mr. Sanger.

"Ladino," he said, and immediately the pasture discussion was in full swing. To prove his point, he brought out his records and there were the facts. From May 7 to September 14 his pasture was ladino and oats, and his barn feed cost per 100 lbs. of milk was .168c. I wonder how many farmers can better it. For the next few weeks feed was mainly second cutting clover and mixed grasses interspersed with the ladino. Barn feed costs, however, increased and we find that from September 14 to October 31 the average was .31c per 100 lbs. of milk.

"How about this orchard grass mixture?" I asked. "Do you really feel it worthwhile to use?"

"By all means," he answered. "Orchard grass starts early, which means an early pasture. It grows in clumps and allows the ladino to grow between the clumps. It grows late, which means late feed, and dry and wet weather alike don't seem to stop it!"

I then asked whether ladino gave best results on wet or dry ground. Mr. Sanger's dry land is outcropped

with limestone ledges and is adapted to sweet clover. He has had the best success using the damper ground for ladino and the extremely dry ground for the sweet. This does not hold true throughout the country. Ladino does thrive on dry soils, but must be well managed and does not grow as luxuriantly as on the moist areas.

"How would you advise a farmer to start a program of pasture treatment?" I asked.

"First," he said, "analyze your own business. Find the number of acres of pasture you need for your stock, and the amount of roughage you need to grow. Check up on your land—some may need to be turned into pasture. Some may need to be turned out of pasture. Some pasture might make better meadows. Test your soil in each lot, and as you obtain the results, place them on paper for reference and carry out a fertilizer program according to the tests! Draw up a three-year plan and see how close you can stick to it for it is a goal to shoot at!"

Pasture management is fast becoming

Hill Farm Thaw

By JESSIE M. DOWLIN.

The chipmunk runs like copper flame
Along the wet old leaves;
White birch in solemn evergreens
Like vivid laughter weaves.

Cool comment sounds along the brook
That hurled its ice on shore;
With pride the hollow-cradled pool
Adds crystal to its store.

Though stolidly the barn-free herd
Regards the field of brown,
The old horse whinnies, starting on
The muddy road to town.

ing an important part of a farm program. The proper feeding of any pasture will increase the total amount of feed per acre. The electric fence has aided the farmer to do this job. It can be set up quickly and with little cost, and can be moved to another field in a forenoon.

Lower feed costs are one way to answer the farmers' problem of combat-

ing increased costs. Analyze your present farm setup. Know what you are doing and what changes are needed. Find what you can do, and then go about the job bit by bit in a systematic way. It will pay you dividends.

*Mr. Atherton is County Agricultural Agent of Litchfield County, Connecticut.

Costs Money to Board Rats

Dr. W. J. Hamilton, of New York State College of Agriculture, who has done a real job in recent years in helping farmers to get rid of rats, reports that farmers estimate their losses from this pest at from \$50 to \$200 a year. If damage to fruit trees by field mice were included, the figure would be much higher.

Among methods used for rat control are trapping, gassing, poisoning, plugging, and cats. If you are troubled with rats, why not organize a neighborhood party, and have some fun and excitement, as well as clean out the rats? For information on rat control, write to Dr. W. J. Hamilton, Ithaca, N. Y., or to your own State College.

"I allus get the best results in the month of April."

THE *Editorial* PAGE

BY E. R. EASTMAN

Address all mail for Editorial or Advertising departments to American Agriculturist, Savings Bank Building, Ithaca, New York.

Might As Well Like It!

FRIEND Bob Hayes, of North Pitcher, New York, sends me this story and bit of philosophy about the weather—and believe me, we need all the philosophy we can get this spring:

"In one of the vaudeville acts that appeared in the 'metropolitan theatres' while I was living there, was a musical number in which three of the four were expert artists. The fourth acted the part of a dumb Swede and could neither sing, dance, play, nor recite. In desperation the others said to him:

"Well, if you can do none of these, why don't you talk about the weather?"

So he began:

"Vell, vedder it's cold, or vedder it's hot
Ve got to have vedder, vedder or not."

You Never Get It All Back

"The power to tax is the power to destroy."

—Old-time Saying.

THE FOUNDERS of America well knew this truth because of bitter experience with England in her taxing policies with the American colonies. With the Boston Tea Party fresh in their memories, they wrote into the Constitution safeguarding provisions. For example, bills for appropriations can only originate in the House of Representatives, because this body is nearest to the people. But in recent years the people themselves, as well as public officials, are responsible for the ruinous rise in taxation. Whenever you say, "There ought to be a law", whenever as a minority group or as an individual you demand services and subsidy from the government, you have increased the power of the government eventually to destroy through taxation. In the end you never get as much as you give.

Fruit Growers' Headache

"Everyone who attended the winter meetings of the New York State Horticultural Society was impressed by the looks of the apples that had been purchased by the Department of Agriculture and Markets from stores in both western New York and in the Hudson Valley. Many samples, that evidently came from a good pack, now showed much bruising and often some rot. While some samples graded 95% Fancy, others graded 95% culls. It was a startling revelation to all apple growers."—R. M., N. Y.

THE ABOVE statement needs no further comment except to ask "What are growers going to do about it?" Even with the export trade in apples nearly gone, you cannot tell me that there is not a good market for good northeastern apples at good prices if growers themselves get together, first, to keep the culls off the market, and second, to support organizations like the New York and New England Apple Institute and advertise to make consumers more conscious of apples in general and northeastern apples in particular.

Cheap Dairy Feed

BY FAR the cheapest feed for the dairy or beef cow is pasture grass. But the pasture season on most northeastern farms is too short. It starts late, the grass burns out early, and the quality is poor.

There is time to change that picture for this season. Most northeastern pasture land lends itself easily and cheaply to improvement. Here are some things to do:

Get the soil tested to see what it lacks. Probably a ton of lime to the acre would work won-

ders in bringing in the white clover. Six or eight hundred pounds of superphosphate will in most cases pay big returns. Then plan to rotate your pastures, feed in one section for a time and then turn the cows into the next one, so as to give the first a chance to catch up. Running the mowing machine where you can over the pasture a couple of times, to keep down the weeds and the too tall grass, is excellent.

This pasture improvement business is beyond the theory stage. Hundreds of dairymen are now doing it and finding that it pays. Be sure to read the personal experience story on page 2 in this issue.

"Farm Horizons"

"The science of farming is amazingly complicated. Not only must a farmer keep up-to-date on farm practices, but he must also adapt his style of farming to rapidly changing conditions. It is a good farmer indeed who understands thoroughly the management of the variety of farm enterprises in which he engages, but it is still more difficult for him as an individual to judge accurately the most desirable way to adjust his farm business for future years.

"The purpose of this report is to present the collective opinions of a group of thinking, successful farmers who have carefully studied all facts available. Young farmers starting out, middle-aged farmers who have farmed during twenty years of agricultural depression, and older farmers who have seen better times, all will be interested in using this report to adjust their business to new situations."

A GROUP of farmers in Seneca County who for more than ten years have been studying and planning the agriculture of their county, wrote the above as the introductory statement to a bulletin called "Farm Horizons" on the agricultural outlook for Seneca County, one of the most valuable and interesting bulletins it has ever been my pleasure to read.

Many other counties have similar planning committees, composed of local farmers who know their soils, their people, and their own farm con-

"Here is my pair of Morgan Percheron colts — 'Mag', born 1911, 'Mike', born 1912. Contrary to the general idea of good management for horses, they have had all their lives about all the good hay they would clean up. They began to work at three years and have worked together most of the time since, and they still are sound in wind and limb.

"It is not remarkable to see a horse 30 years old, but I think it is uncommon to see a pair that are so near that have always worked together on the same farm. Many things have happened in that thirty years. They helped to raise the crops during the World War, took the children to high school six miles away, hauled lumber, scraped the cellars, drew the stone for new walls and new buildings, repaired the damage of the flood of '27 and helped to clean up from the hurricane of '38. In their younger days they were our only means of transport to market and to meeting, to weddings and funerals. No one is going to hammer them around in their old age. Some time we will miss the old horses' nicker when we open the stable door."—A. F. W., Vt.

ditions better than any outsider can ever know them. In the localities themselves is where all agricultural planning ought to begin and end. State and Federal planning and Land Use groups can supplement and correlate the local work. They should never dominate it, nor try to go faster or farther than the local committees desire.

They Appreciate America

"Mrs. Danforth and I have just returned from Hawaii after a delightful couple of weeks there. It is paradise on earth . . . At the close of a day's work I met on the Waikiki Beach, Professor Weaver of Cornell (one of *American Agriculturist's* poultry editors). He is an exchange professor for this year at the University of Hawaii, and I had the pleasure of going to one of his classes and talking with his American boys, all of whom had brown skins and came from Japanese, Chinese, Hawaiian, or Portuguese ancestry. It is a great experience to realize that today they are all Americans and sing the Star Spangled Banner and salute our flag and show by their every act they are proud to be citizens of the United States."—W. H. Danforth.

SOMETIMES wonder if people from other lands who have recently become citizens of the United States don't appreciate our freedom and our privileges under the American flag more than native born Americans do! Many of us have become indifferent to our great heritage. The result is we may lose it.

A Third of the Land Still in Woods

MANY think the woodlands left on the long-time cleared sections of the Northeast don't amount to much. To get this idea out of your head, take an aeroplane trip and you'll be surprised how the woods show up in comparison with the cleared land.

A recent survey made in Tioga County, New York, a long-time settled community, showed that 31.5 per cent, or nearly one-third of the land, was still in woods. That's a much bigger percentage than prevailed fifty years ago, because in recent years much abandoned land has gone back to brush and trees.

Another surprising fact shown by this survey is that 19 per cent of the woods left were hemlock as compared with 12 per cent beech, 12 per cent in red oak, and about 8 per cent in white pine. It is easy to understand from these figures why virgin forests which covered this section of New York State were often called the "Black woods." There was so much evergreen among them.

The figures also show the importance of wood and timber lots on most farms, and the need of giving them the care that you would give any other farm crop.

Eastman's Chestnut

I HAVE known a lot of folks like those in the following story—and they were not all in asylums either.

An inmate at a "state institution" was trying to hammer a nail into the wall, but he had the head of the nail against the wood and was hammering the point.

At length he threw down the nail in disgust and said: "Bah! Idiots! They gave me a nail with the head at the wrong end."

Another inmate, who had been watching him, began to laugh. "It's you that's the idiot," he said, as he jerked his thumb towards the opposite wall. "That nail was made for the other side of the room."

"Prizes or no prizes, American Agriculturist contests renew and confirm interesting information which we would do well to remember."

A GAIN AND AGAIN this sentiment was expressed by those who took part in our Contest for Gardeners. We are glad it is so. That is the real purpose of the contest, and prizes are offered just to give an added incentive.

Also emphasized over and over was the importance of the garden, and the belief that it can be the most valuable spot of land on a farm.

Never in any previous contest have the questions been answered with such uniform excellence—a fact which made more difficult the task of selecting the winners. The judging of this contest was most interesting and stimulating; our only regret was the necessity of weeding out so many excellent answers. It took two persons about ten days, working intermittently, to decide on the winners, which you will find listed on this page.

As most of you will remember, all of the questions asked in the contest had been answered in previous issues of *American Agriculturist*. However the rules did not require that contestants limit their answers to the information given there, and many went to the trouble of looking up additional information.

The contest letters contained so many bits of practical information, and so much philosophy and hope, that we wish we could pass them all on to our readers. That is impossible, so we have gleaned just a few of the interesting comments for you. Here they are:

WE PLANT EARLY

The first thing we will consider in the home garden is earliness. Two years ago our peas were planted March 18, but at this date the snow banks are still 10 to 15 feet deep. Often we can take a chance on a frost for the sake of earliness. With plant protectors to help out, tomatoes, melons, cucumbers, peppers, and even sweet corn can be put in much earlier. Then, of course, the earliest varieties consistent with quality are planted.

Next to consider is a succession of vegetables. This will work best with sweet corn, but other vegetables can be handled the same way, notably peas. Also we will want to take advantage of a late fall and make a planting of sweet corn about July 15. Peas often do well in the fall if the season is not too hot.—*E. H. G., New York.*

PLOWED LAST FALL

I started my garden for this year last fall, after I had gathered last year's crop, by plowing the garden. This winter I have covered it with cow manure. I might add now that our soil is slightly heavy, but the garden is well drained. The fall plowing is a help in preventing the soil from being lumpy. Then in the spring I will plow the garden again. This helps control weeds and works the manure in better. Then I plan to disc the garden thoroughly until the soil is like powder. I may disc a half day on a half acre garden. It may sound like a waste of

time, but it does save a lot of hand raking. Then I go over it lightly with a harrow to take out the ridges. This finishes up the horse work except for cultivating the sweet corn and potatoes.—*V. M. C., New York.*

PLANNING ON PAPER

*The great doors of Eden clanged shut in their rear,
And Adam said, "Wife!" and said Eve,
"Yes, my dear?"*

"Get out your seed catalogs. Spring's nearly here.

I'm planning a much better garden this year!"

So probably garden planning may be called a primal urge. Our garden is still under three feet of snow, but it is all planted on paper. And planned, too, with rows straight across the garden of everything that may be grown in rows, spaced far enough apart for horse cultivating. We always try something new. Last year both muskmelons and watermelons amazed us with a delicious lot of fruit. We'll surely have those again, and maybe some of those funny little squashes or a row of peanuts.

A garden is fun, but it is too much work wasted if poor plants and seed are used. So we order our plants and seeds from dependable firms, and we find those firms the same place our grandfathers (all four of them) found them—in the advertising columns of *American Agriculturist*.—*Mrs. G. O. M., New York.*

NO SPACE WASTED

This year I want to have a garden far superior to that which I had last year. In size it will be the same, but I feel sure that by better planning I can have more vegetables. One way in which I plan to improve it is by using space that had early vegetables, such as lettuce, radishes and green onions, for late carrots and beets, and fall spinach. The area where peas are grown can be set out to late cabbage and cauliflower. Also, I plan to make several plantings of beets, carrots, and string beans so as to have them at their prime over a long period, with one main planting of each for canning purposes. For sweet corn, I plan to plant 3 or 4 varieties at once, which will mature at different times.—*Mrs. W. E., Vermont.*

STAKING TOMATOES

I already have my tomato seed and pepper seed sown in window boxes. This year I will stake my tomatoes so the fruit will not remain on the ground as many of mine last year rotted before ripening.—*Mrs. F. S., New York.*

LESS HOEING

In planning my garden this year, I must keep in mind that I must cut down on our grocery bill next winter and at the same time have just as many vegetables and berries to eat during the summer. We have a good riding cultivator, so why not put such vegetables as beets, carrots, etc., in

long rows, wide enough apart to cultivate with the team and the cultivator? It would take only a short time to run through the vegetable rows when it is needed, and anyway the cultivator is used every few days in cultivating corn, potatoes, or soybeans.—*F. O. B., New York.*

DAILY ATTENTION

For several years we have drawn a rough outline of our garden plot, showing the location of some of the crops. This year we have a more detailed plan which will show where each vegetable crop and each variety of flowers are to be grown. We have them so arranged that the tall growing varieties will not shade the lower ones.

At least to ourselves, we have proved that daily weeding is the best way to control weeds, and that frequent loosening of the surface soil preserves moisture and retards weed growth. Our experience has been that early in the morning is the ideal time

to work in the garden, as there are no social functions, entertaining, or diversions at this time to interfere.—*E. L. E., New York.*

SEED CATALOGS REMIND US

*Cabbage, lettuce and tomatoes,
Turnips, radish and potatoes.
In my mind my garden's growing,
While it's freezing cold and snowing.*

This state of mind has been brought about, as usual, by the arrival of the seed catalogs with their tempting pictures and glowing descriptions of flower and vegetable specialties for 1940. That snow-covered plot of ground, the garden, forgotten for several months, comes to mind again, and we begin to plan for a better garden and hope to profit by our mistakes of other years.—*F. A. B., Vermont.*

PLANT PROTECTORS

I have never tried hotkaps, but this year I expect to get some to use on some hills of corn so as to have early corn. In this connection, I might say I am trying some of the new hybrid corns also. Also, I will try some hotkaps on the melons, with the hope of having extra early melons.—*J. J. O., New York.*

AN ASPARAGUS BED

Sometimes it is difficult to find a space where things may remain indefinitely and be safe from intrusion, but I think I have found such a plot between vegetables and flowers, and here I shall establish an asparagus bed to give return for the future.—*C. L. W., Connecticut.*

INSURANCE

I am planning to sow my fertilizer along the sides of the row and a little below the seed. This will take extra time, but I know it pays. I am also going to treat my garden peas, beans, and lima beans with seed inoculant to see if it increases the yield.—*Mrs. G. W. R., New York.*

USE SPARE MOMENTS

We are planning to spend much more time than usual this year caring for our garden as we have moved it from a distant field to a fertile spot near the house so that any spare minutes can be easily spent there.—*Mrs. W. O. H., New York.*

PLENTY OF WORK HERE FOR A FORD V-8 TRUCK

Dual rear wheels and tires, as shown, are optional at extra cost

Look out across the valley. A patchwork quilt of farmland and fields of growing grain; farm homes; barns and sheds for cattle, hogs and sheep. Crops to move to crib or granary; crops and livestock to move to market.

Look ahead. The man who makes out on the farm today finds newer and better ways of doing things. He doesn't just grow crops and feed livestock. He grows and feeds profitably. More work done in less time with fewer hands.

Crops in at the right time and stock on the market at the right time. That usually means power farming—the machinery to do

the job better, quicker, cheaper. That also means there's plenty for a Ford V-8 Truck to do in this picture. It is a *steady* worker in the fields and *fast* on the roads.

There's a Ford V-8 Truck for any farm, any farmer. There are 42 different body and chassis types to choose from—the right piece of equipment to do a lot of different jobs for you. Check this with an "on-the-job" test. Do the checking right in your own fields and roads, with you or your hired hand at the wheel. Make all arrangements for this "on-the-job" test with your Ford dealer.

• Ford Motor Company, Builders of Ford V-8 and Mercury Cars, Ford Trucks, Commercial Cars, Station Wagons and Transit Buses

WANTED! A Double-Crossed FLINT CORN

FLINT CORN is more important than we realize. This lack of appreciation may be the reason for the almost total absence of attempts by colleges and experiment stations to breed better flint corn. Now there is a very definite plan on foot to plug this gap in plant breeding—a plan in which you can have, in two ways, a most important part. The improvement of flint corn will be undertaken through the cooperation of the New York State College of Agriculture and the American Agriculturist Foundation, Inc. As a subscriber, you are one of the owners of *American Agriculturist*, the profits from which are used by the Foundation in agricultural education and research. That is one way in which you have a part.

The second manner in which you can help is more direct and definite. The first step in the actual breeding of flint corn is to locate the best "state" corn now being grown in the Northeast. If you have been growing flint corn for a number of years and saving your own seed, you have doubtless developed a strain of corn that is particularly adapted to your farm conditions.

Information Wanted

If you have done this, and are willing to provide a 10-ear sample of your seed corn, sit down now and write a letter to Professor R. G. Wiggins, Plant Breeding Department, New York State College of Agriculture, Ithaca, New York. In the letter give the answers to the following questions:

1. How long have you been growing this corn on your farm?
2. Where did you get the original seed?
3. Is your corn eight or ten rowed?
4. How many acres of this corn is raised in your neighborhood?
5. About what date do you usually plant corn and about what time does it mature?

Add any other information that you think would be helpful.

Professor Wiggins will read your letters and will then write you, telling you whether or not he wishes you to send the corn. He definitely prefers to have the seed on the ear, but if that is impossible, the next best is to send a quart sample of shelled corn. Professor Wiggins would like to have samples of flint corn grown at elevations above 1500 ft. in New York, New England, and northern Pennsylvania.

The American Agriculturist Foundation will pay postage on the corn sent so you will be put to no expense. We are not offering to pay for the corn. That will be your contribution toward better seed—a contribution we know you will be anxious to make.

Prizes Offered

However, to lend further interest, we are offering prizes to those who send the corn which this summer gives the highest production on the three yield tests that are to be made. The prizes are: first prize, \$15; second prize, \$10; and three prizes of \$5 each.

Now for more definite details as to what is planned. This year a considerable number of samples of flint corn will be grown on three separate farms in New York State, each at a different elevation. The first object is to find the highest producing strain of flint corn now available and multiply this for seed purposes so all farmers who wish may grow it. That will take some time, but there is no better time than the present to start.

The second aim is to develop a double-crossed flint seed corn that will give higher yields than any flint now

HOW YOU CAN HELP

HERE is an opportunity, if you have been growing flint corn from your own seed, to take an important part in making a better flint seed corn available to northeastern farmers.

FIRST, read the article on this page.

SECOND, give the information asked for to Professor R. G. Wiggins, Department of Plant Breeding, State College of Agriculture, Ithaca, New York.

THIRD, if requested to do so, supply a 10-ear sample of flint corn; or if your corn has been shelled, a 1-quart sample.

FOURTH, compete for the prizes — \$15.00 for first, \$10.00 for second, and three \$5 prizes — as announced on this page.

grown. That is a real job and will require a period of at least eight years. First, the four varieties of strains of flint corn that are chosen as the parents of the proposed new double-crossed flint will have to be inbred for about three years. Then the first cross will be made. Two of the strains will be planted and the tassels removed from one to provide cross pollination, and the same procedure followed with the other two strains. Then the next year a cross between the two hybrids will be made to produce double-crossed corn. After a worth-while double-crossed flint corn has been produced, there will still be the problem of multiplying it to the point where the seed will be available to all farmers who want it.

Flint Corn is Important

Does anyone know how many acres of flint corn are grown for grain in the Northeast? If there is such a person, we have been unable to find him. When it comes to estimating, your guess may be as good as the next fellow's, but here are some figures that throw a bit of dim light on the subject.

New York farmers grow around 700,000 acres of corn each year. Probably 75 per cent of this is silage corn, while 25 per cent is grown for grain. Of this 25 per cent grown for grain, it is estimated that three-fourths is dent corn and one-fourth flint, which, translated to figures, means at least 45,000 acres of flint corn. It is estimated that another 45,000 acres are grown in New England.

There is definite need for a better flint corn. The program and contest outlined on this page give you a definite opportunity to work with the New York State College and the American Agriculturist Foundation in meeting the need.

"No, we don't have a dog. Hector is my name!"

FAST GROWTH to get **BIG PULLETS** that lay **BIG EGGS....**

IS IT HARMFUL or desirable to grow a pullet for early egg production? That's the question many poultryraisers ask themselves during the pullet growing season.

Poultry research work during the last few years has answered this question in no uncertain terms. It is summed up in a statement made recently by Dr. H. J. Smith, Director of Research of Purina Mills. He says:

"Progress in breeding has shortened the period necessary for a pullet to arrive at egg-laying maturity. That means breeders have done much to shorten the period of waiting before egg production begins. It is our responsibility as specialists in nutrition to build rations that will help shorten the period necessary for physical maturity."

By having pullets ready for early production, it is possible to get past the pullet egg stage earlier, and be ready to take advantage of high fall egg prices. Big eggs are usually worth from 8 to 10 cents more in the fall than pullet or "pee-wee" eggs.

You'll find no better way of growing your pullets for complete early development than the Purina way. Purina Growena, the complete feed, furnishes everything a pullet needs for full complete development. If you prefer the mash and grain plan, feed Purina Growing Chow with your scratch grain. This plan also gives good results. *See your Purina dealer for full details of the Purina Pullet Growing Plan.*

PURINA MILLS

St. Louis, Mo.

Buffalo, N. Y.

I DARE YOU!

SALUTE THYSELF in 1940!

Face Yourself Squarely

IN the past two columns we have talked about building a worth-while program in 1940 by reviewing our failures and successes in past years. There are three kinds of people that I have met with regard to this business of building a personal program of growth each year. Some won't even attempt it. Others start off bravely on January 1 and fizzle out about this time of year. And then there are a few determined ones who set themselves a goal on the first of the year and carry it through to the best of their ability by the end of the year.

If you are one of those who has grown too old, or blasé, or bored to make a New Year's Resolution, watch out! On the other hand if you are determined to grow more in 1940 than in any year in the past, then I believe I can help you.

For almost three score years and ten now, I personally can testify to a tried and proven program. Back of it stand hundreds, yes thousands, of my friends and associates. It is a sound one for **you** to follow in months ahead.

—a healthy body:	STAND TALL
—an alert mind:	THINK TALL
—a winsome personality:	SMILE TALL
—a religion that enables us to:	LIVE TALL

Think of our influence if each reader would give such a Four-Square program to the world. During the year ahead, can't we have a passion for making this a living program, first for ourselves, and then for our families, our friends, our community, our world?

Think of what we might accomplish by enlisting our families, our friends, our communities, and our world in this Four-Fold course!

IT WORKS! Now we are to live it and tell it. Let's each one of us begin with ourselves. The only way to conquer mountains is to climb. The only way to grow is to develop those inner forces which God has given us. That is our task for the year ahead. Salute Thyself!

Cutting oats for hay on a Chenango County, N. Y., farm last summer.

Meeting the Hay Shortage

ON PAGE 10 of the February 17 issue and again on page 3 of the March 16 issue, we gave some of John Barron's suggestions for assuring a good supply of roughage for next winter's feeding. The suggestions included fertilizing meadows, topdressing with farm manure, and reseeding, either with the usual seed mixture or with sweet clover. Here are some additional ideas that may help under certain conditions.

Professor Barron points out that, following a dry year, some farmers are inclined to seek some unusual forage crops to grow. Rather than try something new, he suggests that more thought be given to some old standbys. First among these, come oats. Seed is cheap, and most farmers know how to grow them well. Cutting oats for hay instead of grain gives the new seeding a better chance; and in addition oats cut for hay at the proper stage, that is just as they are well-headed out, will produce more digestible dry matter to the acre than when they are threshed. Where oats are to be cut for hay, you can seed a little heavier—say $2\frac{1}{2}$ to 3 bushels to the acre.

Another idea that is worth considering, where you plan to sow additional grass seed on poor meadows this spring, is to add also about $\frac{1}{2}$ to 1 bushel to the acre of oats. This method of handling a damaged new seeding costs little and in most cases, will insure a considerable crop of roughage.

Sometimes field peas or spring vetch are used with oats for hay. You can sow half the usual amount of oats to the acre and include either $\frac{1}{2}$ to 1 bushel of field peas or 8 to 12 quarts of spring vetch. These seeds are more expensive than oats, and it is recommended that they be added only when soil and climate are favorable and where they can be put in early. It is important to inoculate these legumes.

More Corn

Corn is another crop which has possibilities which may be overlooked. For example, looking ahead toward next winter, you may want to put in a few extra acres of corn. If you do not have silo capacity to hold it, you have two alternatives. One is to put up a temporary silo, and the other is to feed it from the shock. Most dairy-men agree that making corn into silage is preferable, but a reasonably good crop of corn fed from the shock will provide more total feed than you are likely to get from a poor meadow. According to standard feeding tables, good corn stalks without ears are as good or better than timothy hay.

The requirements for good corn are

so well known as to hardly need mentioning. Especial emphasis should be given, however, to a few points. These are: 1, a vigorous variety which, if planted by about May 15th, to June 1st, most seasons will reach the denting or glazing stage; 2, planting corn thin enough that normal development may be assured; 3, putting the corn out on land well enough fertilized and manured to make it grow vigorously; 4, controlling weeds so that the corn has at least an even chance.

Where the bottom of the hay mow is uncomfortably close, you may be able to turn the cows out to pasture earlier than usual. Perhaps you have a night pasture where ordinarily there is a rather heavy growth of grass and where droppings have accumulated in large quantity. If you can distribute these droppings evenly by the use of a harrow, the usual lumpy bunchy growth of grass will be prevented. Grass will start early, and the cows can be turned out as soon as it gets a good start, perhaps ten days before the main pasture is ready to graze.

Early Pasture

If you have a good piece of pasture close to the barn, you can apply a nitrogen carrier at the rate of 200 to 300 lbs. to the acre, which will bring the grass on early. If you follow this plan, you will need to fertilize about an acre of pasture for every five or six cows. It may even be that if you do not have a suitable piece of pasture, you can pick a particularly good piece of meadow, fertilize it, and plan to turn the cows in early. You can pasture it a week or two, then take the cows out, and still get a fairly good crop of hay.

After this plow was properly adjusted, it turned a tough alfalfa sod although the driver did not even touch the plow handles. If your plow won't do that, some simple adjustments will make it pull easier and do a better job.

A Walking Plow Tells an Old Story

By G. W. CROWTHER.

THE ABOVE picture was taken last November at a plow adjustment demonstration in Essex County, N. Y. It demonstrates how easy it is to turn a tough alfalfa sod with a walking plow after it is properly adjusted. This plow had been bought at auction for two dollars. No adjustments were made before it was tried out. It was difficult to guide it because it rode on its nose and the handles jerked from side to side. It pulled so hard that the team could not pull together and a miserable job of plowing resulted.

The team was stopped and the beam wheel taken off. The vertical clevis on the end of the beam was adjusted low enough so that the heel of the landside would ride in the bottom of the furrow. This prevented the plow from riding on its nose. The hitch was still high enough so that the plow went to the desired depth of about 7 inches. The beam wheel was then replaced so that it just touched the ground.

The vertical hitch was adjusted to obtain desired depth of plowing and not the beam wheel. The beam wheel was used only to keep the plow from sinking too deep in soft spots in the field.

The jointer was adjusted so that it cut between 1 1/2 and 2 inches deep and about 3/8 of an inch toward the land. The point of the jointer was set slightly behind the point of the plow share so that it entered the ground just as the furrow slice began to break open above the share. The jointer pointed towards the ground at about a 45 degree angle. Proper setting of the jointer decreased wear on the shin piece, left a straight furrow wall, completely covered trash at the furrow edge and decreased the draft of the plow.

The plow was balanced by adjusting the clevis on the horizontal hitch at the end of the beam. When the handles were not steadied they tipped toward the right so this clevis was moved one hole at a time toward the right until the handles did not tip. If they had tipped to the left, the clevis would have been moved toward the left.

The plow cut wide so the long evener were using was replaced with a 38 inch evener. This shorter evener made it necessary to shorten the cross reins between the horses.

After the plow was rebalanced it cut 14 inches wide and continued to the end of the furrow without anyone touching the handles.

It's PLUG CLEANING Time

—for 31 Years

THE QUALITY SPARK PLUG

Standard equipment on America's finest cars, trucks, and tractors, AC's assure you of peak performance and reliability.

Engines use less gas, pull better, with **CLEAN SPARK PLUGS**

Your tractor, car, truck, and stationary engine will deliver more power—on less fuel—if you have your plugs thoroughly cleaned and accurately regapped at regular intervals. Tests by engine builders prove that dirty or worn plugs cut power as much as 21%, and waste up to 10% on fuel.

So, start the season right. Have your spark plugs cleaned and regapped at the nearest Registered AC Cleaning Station. It's easy to do. Take the dirty plugs along on your next trip to town. It costs only 5c a plug. Do it **NOW**—to get full power and save gas.

Box 1129M New Britain, Conn.

One way to spray a field of melons without ruining the vines. Roadways are left at intervals. Then a long line of hose carries the spray material to a boom carrying several spray nozzles.

How to Control GARDEN PESTS

Mexican Bean Beetle

The Mexican bean beetle is one more pest to irritate the home gardener and commercial bean grower. Once you have seen the pest and the damage it does, there is no question about its identity. If you haven't, we can only say this: if the leaves on your beans have had the under surface eaten away, leaving a lacy network of veins and if you find lemon yellow spiny grubs feeding thereon, you can be sure that it is the bean beetle.

In the home garden, or if you are growing snap beans for market, the best control method is dusting or spraying with derris cube or timbo root which contains at least ½ to ¾ of 1 per cent of rotenone. About 8 to 10 lbs. of dust are required per acre for bush beans and about 20 lbs. per acre for a good growth of pole beans. This material is non-poisonous. It is not sufficient to dust on the upper surfaces of the leaves. Plants must be coated thoroughly on the lower surfaces as this is where the grubs feed.

There are two periods when the bean beetle does the most damage—during July and again during late August. It may be necessary to spray or dust as much as three times to control.

The standard poisonous spray to use on beans where there is no danger of injuring bean consumers is 2 lbs. of magnesium arsenate in 100 gallons of water, plus 3 lbs. of powdered skim milk or some other suitable sticker.

Squash Borers

In the home garden the squash borer is a common visitor. To the novice the cause of damage is often a mystery because the white grub tunnels through the stem until the leaves wilt.

Cleaning up all trash around the garden in the fall helps to control this pest, but even so, control is not likely to be complete. One simple thing that can be done is to split the stem lengthwise with a sharp knife where borers are suspected, take them out, and then cover the place that you split with soil so that roots will start out from the nodes.

For the commercial crop, or for the home garden for that matter, it is pos-

sible to spray the plants in July, usually with nicotine sulphate or calcium arsenate. Spray the base of the plant as this is where the most eggs will be laid. The aim is to get the vines so coated with poison that the larva will eat enough poison to kill them when they try to enter the stem.

* * *

Striped Cucumber Beetle

One of the most serious cucumber pests is the striped cucumber beetle. This insect not only injures the plants by feeding on them, but also is a carrier of two diseases—mosaic and bacterial blight. The critical point with the crop is when the plants first come up, as a heavy infestation of beetles can entirely destroy them.

In the home garden it may be possible to cover the young plants with a box frame covered with fine mesh wire to protect them from the pest. The usual spray recommended is a 3-3-50 bordeaux to which 2 lbs. of calcium arsenate has been added per 100 gallons. Bordeaux is not usually recommended until the plants start to run.

If you prefer dust, use 1 lb. of calcium arsenate to 15 lbs. of gypsum or talc. Another mixture is 1 lb. of calcium arsenate, 2 lbs. of a cheap grade of flour, and 12 lbs. of hydrated lime. In the home garden this can be applied with a hand duster early in the morning while dew is on the foliage and while the plants are still small.

* * *

Damping Off

If, when growing plants such as cabbage and tomatoes for transplanting, you have been troubled with an apparent dying of the plant at the surface of the soil, you can be fairly sure that it is the disease known as "damping off". This is caused by a fungus which enters the plant just at the surface of the ground.

This disease always troubles most where the air and the surface of the soil are wet. Therefore, one obvious way to control it is to keep the soil as dry as you can and still get good growth. Sow seeds thinly enough so that the plants do not get too crowded in the flat. It also helps to sprinkle

"How are you on diplomacy, Ed?"

Nichols TRIANGLE BRAND COPPER SULPHATE

Leading authorities agree that Bordeaux Mixture should be freshly mixed as needed. Leading growers agree that Triangle Brand "Instant" Copper Sulphate makes home-mixing of Bordeaux easier, quicker and surer. "Instant" is easier to measure, dissolves immediately, and its 99% purity assures absolute accuracy of copper content. Your dealer can also supply Nichols Triangle Brand Copper Sulphate in Large and Small Crystals, Granular or Snow. For Copper Lime Dust use MONOHYDRATED—It has full 35% Metallic Copper content and is chemically and physically correct.

Say you saw it in AMERICAN AGRICULTURIST.

a little clean sand over the surface of the soil after the seed has been planted. When watering these plants, do it in the morning, preferably on sunny days. A thorough watering once in awhile is better than a frequent light sprinkling. Also, if you will stir the surface of the soil after water is applied, this helps it to dry out quickly.

Cabbage Worms

The cabbage worm is one of the most common pests of cabbage. The white butterflies which you see flying around a cabbage field are the parents that lay the eggs which develop into the worms. Here we are dealing with a crop, the leaves of which are consumed, so an attempt has been made to develop a non-arsenical insecticide, and the best, up to date, is powdered derris root. The only handicap with this material is that it is relatively high in cost.

For the home garden you can mix 1 lb. of derris root, containing 4 per cent rotenone, with 7 lbs. of powdered talc to use as a dust. Hydrated lime is NOT recommended as a carrier for derris. It causes it to deteriorate.

In most sections that grow cabbage for kraut there has been no difficulty in using arsenicals as, of course, the outer leaves are trimmed off. Even here it is recommended that the last application should be made at least two weeks before harvest.

Where arsenate is used, the recommended portion for dusting the garden is 1 lb. of powdered arsenate of lead, 3 lbs. of hydrated lime, and of course the same proportions for bigger acreages. For a spray for a commercial crop use 8 to 10 lbs. of arsenate of lead, 1 to 1½ lbs. of casein spreader, and 100 gallons of water.

Cabbage Maggots

A gentleman from New Hampshire writes: "I hope to plant some cabbage this summer, since I like to eat cabbage fresh from the garden and also like to make sauerkraut. But every year I lose so many plants with the cabbage maggot. Could you recommend some easy method of controlling this pest?"

Maggots usually do bother cabbages, particularly the early plantings, and I'm glad to say that Warren D. Whitcomb of the Waltham Field Station has discovered a rather easy way to control this pest.

The old system used to be to pour one-half cupful of corrosive sublimate around the roots of each plant, but that was a very slow and back-breaking job. Now Mr. Whitcomb finds that by simply dusting the roots and lower stems of the cabbage plants with calomel powder, as you take them from the cold frame to transplant into the field, you can control, to a large extent, the cabbage maggot.

Simply let the plants get dry enough so that most of the soil will shake off. Then stick the roots into this calomel powder and shake some of the dust over the roots and lower stems very thoroughly. This is all the treatment that is necessary. In an experiment last year, 85 per cent of the plants were protected by this system and 94 per cent of the plants produced large and medium heads. So you can see that this is an easy method of control for the home gardener. One pound of calomel will treat about 2,000 plants.—**G. O. Oleson.**

Don't Overdo Ashes on the Garden

Too many wood ashes on the garden may be harmful because they do not improve heavy soils, and because of their lime content which may tend to make the garden soil too alkaline. They contain potash, which, up to a certain point, is helpful.

Coal ashes do not contain plant food, but tend to lighten heavy soils.

Dibble's

TESTED FARM SEEDS

The most positive guarantee of your seed quality, your results, your profits—is the reputation of your Seed House. Thousands depend on Dibble Seeds—and come back year after year. ALL northern grown, hardy, acclimated, and of KNOWN origin! They're profitable under almost ANY conditions.

HIGHEST GRADE SEEDS OBTAINABLE
D.B. ALFALFA, CLOVER and GRASS SEED—Average 99.50% Pure. No winterkill. No second seeding. Dibble Quality this year at ordinary prices!

Here's How to Make HAY Worth \$5 MORE A TON

● Get your hay down quicker with a Case oil-bath Hi-Lift mower that lets your team step along faster because it pulls easier. Spare their necks with its balanced weight.

● Save the labor and avoid the leaf losses from loading and stacking. Bale direct from the windrow with a Case Pick-Up baler and save one to three dollars a ton on cost in the bale.

● Lift hay clean from swath or windrow with cylinder pick-up of Case No. 17 loader. Save labor with its positive push-bar delivery that puts hay well forward on wagon.

● Make the most of legume and other hay crops regardless of wet weather by making molasses silage with this new hay and silage cutter. Automatic metering molasses pump.

Compared with ordinary sun-scorched hay, air-conditioned hay has more color, more vitamins, more leaves, more protein. Fed at home or shipped to market, top quality air-conditioned hay is worth \$5 to \$10 a ton more than ordinary hay. Because they build higher, narrower, looser windrows . . . because they turn leaves in, stems out more consistently . . . Case side-delivery rakes give you more completely air-conditioned hay.

The new tractor rake is geared to go one-third faster without throwing or threshing the hay. Four reel bars instead of three give the same clean raking while covering a third more acreage. The two simple gears run in oil bath, so you can count on their standing up year after year under tractor speeds. Look at the latest for making hay . . . also hay-crop silage . . . at your Case dealer.

Send for Hay Tool Booklet
Tells the "why" as well as the "how" of making better hay, shows the most modern methods and machines. Get your free copy now. Mail this coupon to J. I. Case Co., Dept. D-6, Racine, Wis., or nearest branch.

that Really Works

Because Cooperating Farmers Fought to Get It!

Everywhere in this milk shed, rejoicing farmers are saying: "The Federal and State Milk Orders are really working." Everywhere farmers are profiting from better prices. North, East, South and West, former disunited groups are composing their differences and are joining wholeheartedly in a movement to keep the good work going.

Because for the first time in the history of this milk shed a well devised price plan is really working—eliminating the chiseler, steadying markets and giving the farmers a better price than they have known for years. And it is working only because farmers themselves had a voice in shaping it—because it is a plan that was devised primarily by farmers.

They won that right through the tireless efforts and unselfish devotion of many cooperative leaders. And they have continued to hold that hard-won right only because their cooperative leaders have been alert every second to the counter moves of the dealers and of dealer-controlled opposition.

Right at this very minute farm cooperative leaders are welding another link in the chain of price stability. For a long time these leaders have been looking ahead to next summer to guard against milk prices hitting bottom. For some time now they have been saying, "This year it is going to be different."

And now a new Federal order is to be submitted to farmers for their vote. While it still may not be perfect, yet it provides the best protection dairy farmers have ever had for the price of their summer milk.

We farmers of the Dairymen's League applaud the spirit and harmony with which all cooperative leaders have worked. For as the oldest cooperative group in the milk shed, we know from long experience that only in cooperation is there strength . . . and only cooperation can win for farmers the rights and benefits that all farmers want.

April 15 Is Deadline for Vote on Milk Order Amendments

MILK PRODUCERS in the New York milk shed who vote individually must mail their ballots expressing approval or disapproval of the amendments to the Federal Milk Marketing Order before midnight of April 15. New York State producers will at the same time vote on amendments to the State Order which will run parallel to the proposed changes in the Federal Order. Ballots will be mailed to Laurence Clough of the New York State Department of Agriculture and Markets, 383 Madison Avenue, New York City.

If the vote is favorable, and there seems little reason to doubt that it will be, the amended Order will doubtless become effective May 1. However, it must be approved by at least two-thirds of the producers who vote. Then the amended Federal Order becomes effective when dealers handling at least half of the milk sign it. If dealers fail to sign, the Secretary of Agriculture, with the approval of the President, can still make the Order effective.

Prevents Drastic Price Drop

From the producer's viewpoint, the most important amendment sets a minimum Class I price of \$2.45 for May, June, and July of this year, and \$2.65 for November and December of this year. The amendment will increase the price for the next three months by about 25c a hundred above what the price would be without the amendment. The Class I price of \$2.82, which went into effect when producers voted favorably on the proposed amendments last fall, expires May 1.

Another amendment will require dealers to make some payment for skim milk when paying for milk used in Class II-A (fluid cream). When butter brings between 25c and 28.5c a pound, Class II-A price will be \$1.65 for March through July and \$1.80 for August through February, plus the value of the skim milk.

The amended Order will reduce by about 10 per cent payments to dealers for diverting surplus milk to manufacturing plants, and the length of haul on which diversion payments may apply is limited to 65 miles.

If the City of New York and the U. S. Department of Agriculture put into effect a plan to distribute milk to those on relief, the amended Order provides that this milk shall be priced at 57c a hundred below Class I. It is proposed that the Federal Government pay a part of the cost of any such program in order to make possible distribution of milk to needy families at about 5c a quart. For this milk producers will receive a price presumably somewhat above the uniform price.

Other proposed changes in the Order are minor and have to do with pricing of various classes. They are designed to bring them into better adjustment with each other. As already indicated, the amendment applying to the Class I milk will be most important to dairymen.

Producers Worked Together

Last summer request for the amendment to set the Class I price of \$2.82 until May 1, 1940, was made by the Metropolitan Cooperative Milk Producers Bargaining Agency. Then, realizing that unless further action were taken the Class I price on May 1 would suffer a drastic drop, the Producers Bargaining Agency laid plans to prevent that situation by requesting other amendments to become effective May 1. Hearings on proposed changes were held last October, again in January,

and again on February 29 and March 1. The amendments on which producers are now voting are the outcome of this action.

The situation shows the absolute necessity of a strong producer organization to work with Government agencies in making marketing agreements and orders effective. It is easy to see that Government agencies are not likely to take the initiative to raise prices. Neither can individual dairymen or small groups get the prompt action that is necessary.

* * *

Producers Amend Buffalo Order

An amendment to the Niagara Frontier Milk Marketing Order for the Buffalo area became effective April 1. Over 99 per cent of the dairymen who

voted favored the amendment. The change concerns only the price for Class I milk, and provides a minimum for Class I of \$2.60 a hundred until April 1, 1941. Without the amendment, the price would have dropped to \$2.45 on April 1.

As already stated, the \$2.60 price is a minimum price, and Class I milk in Buffalo will go to \$3.00 whenever the New York City butter price averages more than 32.4c a pound.

* * *

Heavy Milk Production Lowers Price

Commissioner H. V. Noyes has again called attention to the effect of high milk production on the price the producer gets. For example, in February producers in the New York milk shed received a uniform or base price of \$2.10 a hundred. However, dairymen actually received nearly twice as much for the 73 per cent of the milk which was sold in the upper price brackets as they did for the 27 per cent sold in the lower price brackets.

Says Commissioner Noyes, "I think it is open to considerable question whether they would not have been better off had they not produced the extra 27 per cent at all."

If every dairyman will remember that any increased production brings him, not the uniform price, but a much lower price, it may cause some thought before attempting to push the production of his herd upward. When we remember that for the month of June the amount of milk going into the upper brackets will be about 50 per cent instead of 73 per cent, it is easy to see why prices for those months will be lower.

Amsterdam Producers Want Order

The Amsterdam Milk Producers Cooperative, Inc., have petitioned Commissioner Noyes for a State Order for the Amsterdam area. If such an Order goes into effect, it will be similar to those now in effect in Buffalo, Rochester, and New York City.

It's Performance that Counts!

This is the handy new McCormick-Deering Portable Milker. Natural action. Choice of single or double units.

- ALMOST ANY MILKER, cream separator, or milk cooler will do a good job when new. What counts, though, is steady, dependable, day-after-day, year-after-year performance. McCormick-Deering Dairy Equipment has an enviable reputation for that kind of performance.

If you are thinking about buying or trading for a new milker, milk cooler, or cream separator, we'd suggest that you talk to the nearby International Harvester dealer. He can tell you why the purchase of McCormick-Deering Dairy Equipment is a good, sound investment.

INTERNATIONAL HARVESTER COMPANY
(INCORPORATED)
180 North Michigan Avenue Chicago, Illinois

"Our new streamlined McCormick-Deering Cream Separator is a beauty and so easy to take care of," says Mrs. M. H. Paulson, Grinnell, Iowa. Mr. Paulson is shown above. All parts contacting milk in the new McCormick-Deering are of stainless steel. Carbon steel spouts, supply can, regulating cover, and float also available.

"Our McCormick-Deering Milk Cooler couldn't be bought for any amount of money if we couldn't get another one," writes William Jorgensen of the Jorgensen Dairy Farm, Milan, Mich. "We purchased it about two years ago and it has proved more than satisfactory. Milk is cooled to 40 degrees in no time at all and with no labor on our part." Mr. Jorgensen and daughter, Gracie Lane, shown above.

TIME WELL SPENT

Time taken to read the advertisements in **AMERICAN AGRICULTURIST** is time well spent—for there is no better way to keep well informed on new things on the market, what to buy at what price and where to go to get what you want. When you answer an "ad", be sure to mention the name of

AMERICAN AGRICULTURIST

NORTHEASTERN Slants ON THE National NEWS

■ Secretary Wallace Testifies

APPEARING before House Agricultural Committee recently, Secretary Wallace gave his blessing to a Farm Credit reorganization plan which has been denounced by all of the major farm organizations in this country. Jones-Wheeler bill, covering this plan, is now pending in Congress. If it becomes law, Land Banks will cease to be farmer cooperative institutions, but instead will become government agencies.

Secretary Wallace admitted to House Committee that this plan would probably cost Federal treasury in next 7 years \$15,000,000 more than present Land Bank system.

National Grange Master L. J. Taber, testifying before same committee, said that he was terrified by some provisions of Jones-Wheeler bill. This legislation would make federal land banks fully-owned government corporations, get rid of farmer ownership and management, and would eliminate personal responsibility of borrowers by letting them discharge their loans by deeding over the property involved to the land bank.

Said Mr. Taber: "I am alarmed by this bill because it will increase danger of centralization of authority and bureaucratic control. It will destroy local interest and local participation in farm loan affairs. By one legislative step, it would destroy 23 years of work and investment of \$130,000,000 of farmers in their own system." Mr. Taber added that in 25 years of appearing before Congress, he had never seen farm forces so united as they are now against Jones-Wheeler bill.

Also pending in Congress is Gillette Bill, Senate number 3480, and this is backed by National Grange, Farm Bureau, and National Cooperative Council. If this bill can be passed, it will save cooperative features of Farm Credit and prevent other destructive changes which have been threatening since Secretary Wallace took over Farm Credit last July 1st.

President Edward A. O'Neal, of American Farm Bureau Federation, who also testified before a congressional committee on farm credit situation, said that he favored return of farm credit to its former status as an independent agency, and he deplored the resignations of able farm credit officials who have been forced out since July.

■ Newark, N. J., To Get Food Stamps

FIRST CITY in New Jersey to take part in U. S. Dep't. of Agriculture's food stamp plan will be Newark. This will be, also, first city in metropolitan area and largest city in the East to try out the scheme.

About 32,000 persons on Newark relief rolls and 9,000 "dependents" will get free government food stamps equal in value to half of what they actually spend for food. Idea is to get these families to buy half again as much food as they otherwise could. Free stamps are good only for certain surplus farm crops, as plan has double aim of feeding the needy and of moving farm surpluses.

Thirty other cities in the country now have the plan in operation.

■ Billion Dollar Interest Charge

ON APRIL 1, Secretary of Treasury Morgenthau announced that from now on only individuals can buy U. S. savings bonds. Corporations, banks, trusts and other organizations will not be accepted as customers. These "baby bonds" are popular and their sale is being restricted because they carry a higher rate of interest (2.9%) than any other securities now being marketed by Government. Federal Treasury is interested in holding down government interest charges, which have been showing red light signal for some time. Cost of financing federal debt, —that is, of meeting interest charges on government securities—is now more than a billion dollars a year —more than it costs to run all government departments, bureaus and agencies.

SLANT: Federal debt is within a few hundred millions of reaching its legal limit, \$45,000,000,000. With Congress recklessly voting huge appropriations after a faint-hearted attempt to economize, this country is faced with prospect of new taxes or raising of national debt limit and still higher Government interest payments. In either case, the public will have to foot the bill.

■ Cotton Stockings Are Back

LONG HAVE cotton growers wished that women would return to wearing cotton stockings, but in vain. In 1938, a summary showed that 88 per cent of all stockings worn by the fair sex in this country were made of silk.

So cotton industry said, "If only there was a way to make cotton stockings sheer and flattering, women would buy them."

Last week, it was announced that the Federal Bureau of Home Economics and the Mercerizers Association of America have together developed a full-fashioned, high-quality, cotton stocking, knit on same machines used for silk hosiery. These stockings, known as U. S. Dep't. of Agriculture Style No. 106, are a cotton mesh hose and will cost plenty—\$1.00 a pair. On April 1st they went on sale in 10,000 retail shops. In spite of the price, high for cotton stockings, the industry thinks women will buy them because they are smart and are supposed to wear longer than silk. However, cheaper silk stockings (drastic price cuts were announced this month) and the introduction of the new, long-wearing Nylon hose in May may keep the new cotton stockings on the shelf.

■ Home Mortgage Rate Lower

NATIONAL Association of Real Estate Boards reports that in 19 per cent of cities of the country, 4½ per cent has become most frequent interest rate for first mortgages on new moderately priced homes. In many other cities, 5 per cent is now the rule. Supply of money for home mortgages, says the Association, is most plentiful for any period in past 17 years.

■ Farm Picture

MARCH summary of Bureau of Agricultural Economics points out that while European war has decreased United States exports of farm products, it has increased demand for them here at home. Speed-up in industrial production of war goods for foreign buyers has put more men to work in this country, and some of the payroll money going into their pockets is be-

The Song of the Lazy Farmer

MY NEIGHBOR says it's his belief, us farmers must have some relief, each year our taxes go up more, with prices almost always lower, with int'rest on the mortgage due, and new bugs ev'ry year to chew the profits out the crops we grow; my neighbor says first thing we know we'll find that we are busted flat, we need to find out where we're at, he says, and git the government to help us ere our money's spent. He says the price of things we buy has just gone up so dog-goned high that our expenses are so great they'll git us, sure as fate. Some day the sheriff will appear and throw us out upon our ear, the poorhouse will be our abode when we're set out upon the road, unless we set up such a yell, we scare the politicians well, so they'll fix things all up for us and help us, cause we made a fuss.

I reckon that my neighbor's right, but I don't lie awake at night a-worryin' because I ain't got money to buy nails and paint. My place needs fixin', I'll allow, I ought to buy a better plow, but what if I am in the hole? I'll git me out my fishin' pole and hie me out beside the crick down yonder where the fish are thick. As I sit there upon my seat, I'm sure I'll have enough to eat; with fresh fish in the fryin' pan I'll feel I'm good as any man. I ain't got much cash in the bank, but bankers, lean and cold and lank, ain't got no fish, I wouldn't trade with them for all the cash they've made. My lot in life ain't very tough, I always seem to git enough, the days are happy days for me because I never fret, by gee. I just take things the way they come, perhaps I am a lazy bum, but I git lots of joy from life a-restin', free from all the strife of tryin' to make lots of mon, I'd rather take my pay in fun.

ing spent for more food for their families. This increased demand has helped to support prices of farm products and improved farm income in recent months.

However, prices of principal farm products are still below levels that would give farmers a purchasing power equal to what they had in 1910-14, according to Bureau's summary. Although average level of prices which farmers got for their products in February was 1 per cent higher than in 1910-14, farmers had to pay 22 per cent more for commodities they bought than they paid before the World War. If farmers' interest and tax payments are included in things they have to buy, then their present costs are 28 per cent above 1910-14 level.

official papers, blaming Germany. Present German White Book blaming United States makes the third for Germans. Their first two argued that the war began because Britain wanted it.

■ More Highway Accidents

YEAR OF 1940 has gotten away to bad start for motorists and pedestrians, at least in New York State. Commissioner of Motor Vehicles for that State reports that accident statistics for January and February show big increase over last year. January record was up 20.3 per cent, and February 10.6 per cent.

Compared with last year, February record showed:

Increase of 16 deaths of occupants and drivers.

Increase of 14 fatal daylight accidents.

Increase of 8 fatal accidents on wet and icy streets and roads.

Increase of 11 fatal accidents in open country areas.

Increase of 13 fatal street intersection accidents.

Increase of 53 fixed object accidents.

Total number of accidents for February 1940 was 4,375, resulting in 115 deaths and 5,629 injuries.

SLANT: Above summary of motor accidents should make anyone who cares about being alive drive more carefully, and also resolve to protect

his family with a good accident insurance policy.

■ Senate Votes for Trade Pact Program

JUST as we go to press, Senate has approved Secretary of State Cordell Hull's reciprocal trade agreement program and sent it to White House for signature of President, who will undoubtedly sign it. House had previously passed this legislation.

Trade Act which was originally passed in 1934 and renewed for 3 years in 1937, has resulted in 22 trade pacts with foreign countries. Idea behind program is that each side makes concessions, a sort of "You buy this from me, and I'll buy that from you" policy. Those against pacts contend that they hurt American industry and agriculture by lowering tariffs on certain products. Secretary Hull, on other hand, believes that world prosperity and, eventually, stable world peace, depend on a freer exchange of goods.

■ Germany Points Finger At United States

SENSATION of fortnight was publication by German Government of a "White Book", claiming to prove that United States had share in starting present European war. According to documents in book, so say the Germans, two American Ambassadors played a part in encouraging Poles to resist Germany.

Certain Polish diplomats last year are supposed to have written home to Polish Foreign Office and reported that William C. Bullitt, U. S. Ambassador to France, said "If war were to break out, we certainly would not participate in the beginning, but we will be in the finish." Joseph P. Kennedy, American Ambassador to Great Britain, is reported to have promised a Polish diplomat to urge British Government to loan money to Poland, and to have stopped further British efforts to settle things peacefully. President Roosevelt is also accused of having indirectly fostered an American war psychosis to help the Allies.

Germans claim that they found the documents in Warsaw Foreign Office after they conquered Poland. Polish officials, living in exile in France, say documents are faked, as all originals of important diplomatic papers were taken out of Poland in first week of the war and got safely out of country. Washington officials wholly deny German charges. President Roosevelt, at a press conference, advised that they be taken with one or two or even three grains of salt as mere "German propaganda." Ambassador Bullitt declares that he never made any of the statements attributed to him.

SLANT: Warring nations always try to pin guilt for starting war on other fellow. Britain and France, since last September, have published three

CHEVROLET TRUCKS

You know you're right when you choose the truck that wins more buyers than any other in America!

Chevrolet trucks out-sell all others because they out-haul and out-save all other low-priced trucks

You make the safest of all truck investments when you buy a Chevrolet truck!

You know in advance that it will give you the *strongest and most reliable service at the lowest cost*, because that has been proved for you by the combined experience of the truck buyers of the nation over a long period of years!

And it is doubly proved today by the fact that truck users buy more Chevrolet trucks than any other make.

So buy your Chevrolet, knowing that experienced truck users everywhere have found that it out-works and out-hauls all other low-priced trucks.

Buy your Chevrolet, knowing that experienced truck users everywhere have found it to be better designed, better engineered, better built for long, hard, dependable service than any other low-priced truck!

Your Chevrolet dealer will be glad to arrange a thorough demonstration—today!

GOOD SEED for GARDENERS

THE BUYER of a packet or an ounce of garden seed takes a lot for granted. About all we think of is the seed and what it does for us. A country-wide tour wakes a person up to the fact that production is widely scattered throughout our land and that many specialized and, to most people, unknown processes and problems are involved in delivering good seed to the planter.

A good many people in New York are deeply interested in where market seed of cabbage can be well produced. New York is an excellent place to breed stocks but it has serious limitations for the multiplying of these stocks into market seed ready for the seller. Some of our seed growers send stock

By Paul Work

tato growers know that they must learn their game and follow the best advice to achieve success. The same thing holds for the contract grower of garden seeds but there are not many

sources of advice and guidance. Special problems of soil and fertilizer, of planting and care, of harvesting and curing are exceedingly complicated. The spacing of plants for best yield and development and for practical ripening and curing conditions, methods of irrigation and fertilizer applications all come in. Each kind of seed has its own requirements in harvesting. The

plant must be cut or the seeds gathered when most of it is mature enough to give good viability. If it is left too long, there is likely to be serious loss from shattering in the handling.
